100 YEARS SINCE 1921 GEBRÜDER SCHULTE

» Success always
has a story

Since its foundation, the family business Gebr. Schulte GmbH & Co. KG has been manufacturing and developing its products in Sundern, Sauerland, and is one of the leading shelving manufacturers in Europe.

Today, high-quality shelving systems for professional users in industry and trade are produced under the SCHULTE Lagertechnik brand. The product portfolio includes boltless shelving, boltless office shelving, wide span shelving, pallet racking, cantilever racking, multi-storey shelving systems and platforms. Many years of experience in the production of shelving systems for a wide variety of areas on state-of-the-art production facilities at the Sundern site form the core competences of the company. Today, an own production and storage area of more than 30,000 m² and a globally operating sales department with a modern logistics system characterise the 400-strong company as a reliable partner.

However, the story begins much earlier - namely in **1921**, 100 years ago, when the brothers Franz and Josef Schulte founded the metal goods factory Gebrüder Schulte. This is the starting signal for the family and company tradition that is now being continued by the third generation.

Starting with curtain rods and, since the **1950s**, shopping trolleys, the company produced shelves for the household for the first time in **1960**. From **1982** onwards, industrial

shelving is added to the product range and from **1989** onwards, heavy duty shelving. The construction of a high-bay warehouse in **1999** marks the change to a system manufacturer and our entry into large-scale projects.

Innovations and comprehensive service are the success factors in the new millennium. In **2003**, the MULTIplus generation of shelves is introduced, followed by the system platform in **2011** and the multifunctional support in **2012**. To increase production capacity, an additional shelf line was installed in **2014**. Another high-bay warehouse was also installed in **2014** to increase delivery performance. In addition, the retail partners are offered a comprehensive service for shelving and warehouse logistics - such as the annual shelving inspections since **2009**. The training courses take place in the SCHULTE Academy, which was founded in **2013**. With the SCHULTE 3D Configurator introduced for trade partners in **2017**, the SCHULTE 3D Configurator introduced in **2017** for trade partners, the appropriate systems can be easily configured, visualised in real time and then output as a finished quotation. In **2021** we had the 100th anniversary of the company, which we celebrated with a big family party in **2022**.

Over the decades, the family-owned company Gebr. Schulte has continued to develop.

And the story continues

Your

Andrea Schulte,
Managing Director SCHULTE Lagertechnik

» The history of a family tradition

Since its foundation, the family-owned company Gebr. SCHULTE GmbH & Co. KG has been manufacturing and developing its products in Sundern, Sauerland, and is one of the leading shelf manufacturers in Germany. Under the brand name SCHULTE Lagertechnik, high-quality shelving systems are produced for professional users in industry and trade.

Our history began over 90 years ago. Brothers Franz and Josef Schulte founded the metal goods factory Gebrüder Schulte in 1921; it is now managed by the third generation of the family.

The company founders brought the Schulte brothers through difficult times and used the "economic miracle" in the 1950s and 1960s to build up the company. We started on the road to success. In 1960 we started the production of household shelving. In 1971 Gebrüder Schulte moved to the industrial area "Zum Dümpel" and continued to grow there.

Under the brand name SCHULTE Lagertechnik, high-quality shelving systems are produced for professional users in industry and trade. An own production and storage area of more than 30,000 sqm and a worldwide operating distribution with a modern logistics system distinguish the company as a reliable partner.

Innovations are the success factors at SCHULTE Lagertechnik. In 2003, the MULTIplus generation of shelving is introduced, followed by the system platform in 2011 and the multi-functional support in 2012. 2014 saw the installation of an additional shelving line to increase production capacity. A further high-bay warehouse will also ensure increased delivery performance in 2014.

With the SCHULTE 3D-Configurator, which was introduced in 2017 for trade partners, the appropriate systems can be easily configured, visualised in real time and then issued as a finished offer.

In addition, retail partners are offered a comprehensive range of shelf and warehouse logistics services – such as the annual shelf inspections since 2009. The training courses take place in the company's own SCHULTE Academy, which was founded in 2013.

Rely on competence and customer proximity:

Your shelving specialist will advise you directly on site. SCHULTE Lagertechnik determines your requirements together with you.

With shelving systems from SCHULTE Storage technology, you will receive a storage and logistics concept tailored to your individual needs. No matter what your requirements are, SCHULTE Lagertechnik offers you systems that are precisely tailored to your industry.

Our product portfolio:

- Shelving systems Plug-in and bolted system
- Office shelving Plug-in and bolted system
- Wide-span shelving
- Pallet racks
- Cantilever racking
- multi-storey shelving and mezzanine systems

» The SCHULTE STORY

SCHULTE Lagertechnik is a specialist for customised shelving systems. Managing Director Andrea Schulte explains in an interview what makes the company special and what ultimately benefits customers.

Mrs Schulte, your company has a 100-year history since 2021. How has your company developed into to what it is today?

» **Andrea Schulte:** Since the foundation of our company in 1921 by my grandfather and his brother as a metal goods factory, Gebrüder Schulte has been developing steadily. From the original operation of the tannery to our first products such as the curtain rods or shopping trolleys in the 1950s and the household and cellar shelves in the 1960s. We have always looked around to see which products are needed in the home. The growth of our company has gone hand in hand with the market and the requirements of our customers.

Where does SCHULTE Lagertechnik stand today?

» After my uncle successfully led the company for many years, the Schulte brothers are now managed by my cousin and myself in the third generation. Today's main pillar of the company Gebrüder Schulte are our industrial racks, which are sold under the

brand name SCHULTE Lagertechnik. The portfolio includes cantilever racking, pallet racking, wide-span shelving, shelving systems and small to large systems and mezzanine systems. We are particularly well positioned in the shelving sector with the MULTIplus system. With this entire portfolio, exactly what customers need for their warehouse products and processes in intralogistics can be implemented – from screws and online shop goods to machine parts weighing several tons: everything can be stored perfectly. And: All this is still "Made in Germany" – produced in Sauerland, absolutely high quality with top price performance.

» That way we can stay on the road to success.

What is special about SCHULTE Lagertechnik? What can customers and clients look forward to?

» We are not simply a shelf manufacturer and shelf supplier, but a system provider. It is important to us to offer

complete solutions – everything from one source. This includes initial consultation at the beginning, professional project planning in the sense of creative engineering as well as complete assembly and final acceptance. Our consultants are close to the customer, look closely at what is needed and try to work out the best possible solution in cooperation with our research and development department, even if it has to be a special solution that does not yet exist today. We are partners at eye level and attach great importance to close cooperation and coordination with the customer. Our credo: "make smart". A SCHULTE shelving system is characterised by many clever details which create more space on the same area, simplify and speed up storage, order picking, dispatch or contribute to improved ergonomics. For example, if our planners design an e-commerce warehouse, they optimally coordinate routes and storage options and integrate returns management. This brings time and cost advantages.

Where do you currently see the largest challenges of the market?

» We have the "Amazon Prime" effect on the market. Fast delivery, best possible service and top quality at a good price. Customers and end users expect goods ordered online to be available the next day if possible. This means that e-commerce warehouses must be trimmed for structure, clarity, easy picking, short distances and speed. In times of digitalisation, service and integrated services have also become increasingly important factors for the customer. This includes professional

and fast advice on the phone and on site as well as digital tools and processes to support our customers. That's why we must continue to develop steadily in the future and not lose sight of the customer.

- » We will continue to work on new product developments.

How do you regard the position of SCHULTE Lagertechnik on the topics of Industry 4.0 and Intralogistics 4.0?

» Our own workflow in production and logistics at the Sundern site is already integrated in the process of digitalisation. This enables us to manufacture to customer specifications and to deliver just-in-time, largely using our own fleet of vehicles. For our customers, we develop shelving solutions in such a way that they are optimally integrated into the respective intralogistics concept. That is to say: We ensure that the physical warehouse and the respective data management in the form of inventory management & Co. go hand in hand in the best possible way. In addition, we are continuously

expanding the SCHULTE service digitally. Examples are our software solutions pCon-Planner and our SCHULTE 3D-Configurator, with which we support our specialist dealers. But we are also increasingly using digital solutions in sales and marketing to improve service and communication. This helps our customers and us – and saves time and costs in the long term

Mrs Schulte, what are your entrepreneurial goals? In which direction is SCHULTE Lagertechnik developing?

» We will continue on our path as a solid family business in Sauerland. We continue to focus on research and development as well as innovation development for the benefit of our customers. Also in the future we will be the shelving specialist at the side of our customers, delivering, with our "clever" shelving and customised solutions, the best possible performance. We keep a close eye on how the market and the industry are developing and provide appropriate impetus. It is important to us, even as a 100-year-old company, to move with the times and always be one step ahead. I am looking forward to con-

tinuing to offer clever storage solutions with a strong team in exciting times.

» I want to see it **in 3D!**

SCHULTE Lagertechnik supports its trading partners in the preparation of offers with 3D visualisation software. The pCon planner visualises various warehouse configurations in 3D.

Success begins in your mind

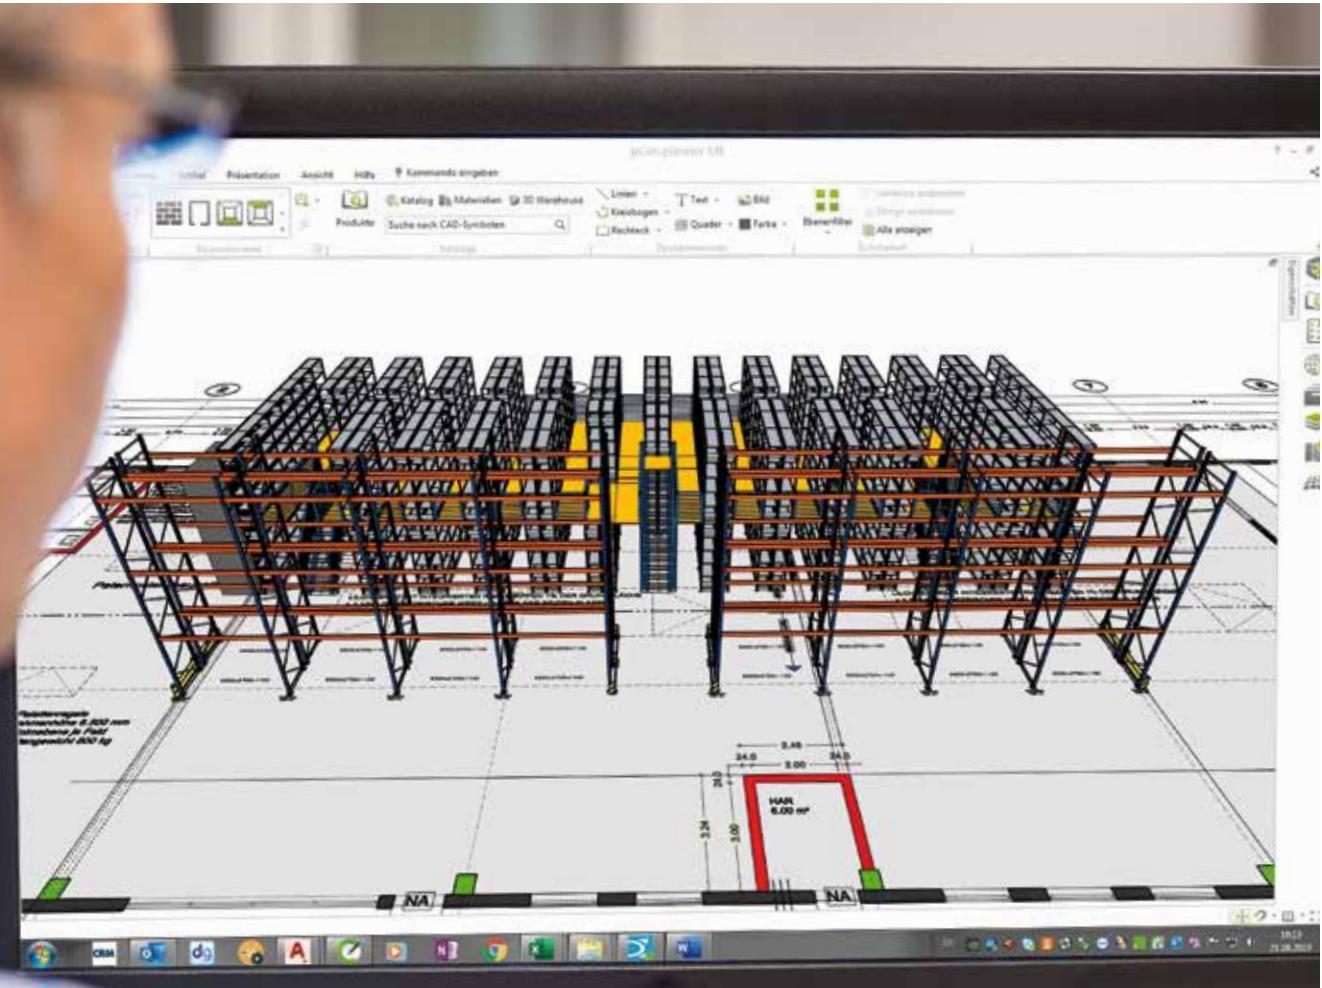

In order to make planning a warehouse easier, SCHULTE Lagertechnik offers software that you can use to create a three-dimensional visualisation and calculate the different scenarios in advance. The program offers a range of tools for drawing spaces and configuring a warehouse with a whole host of different components.

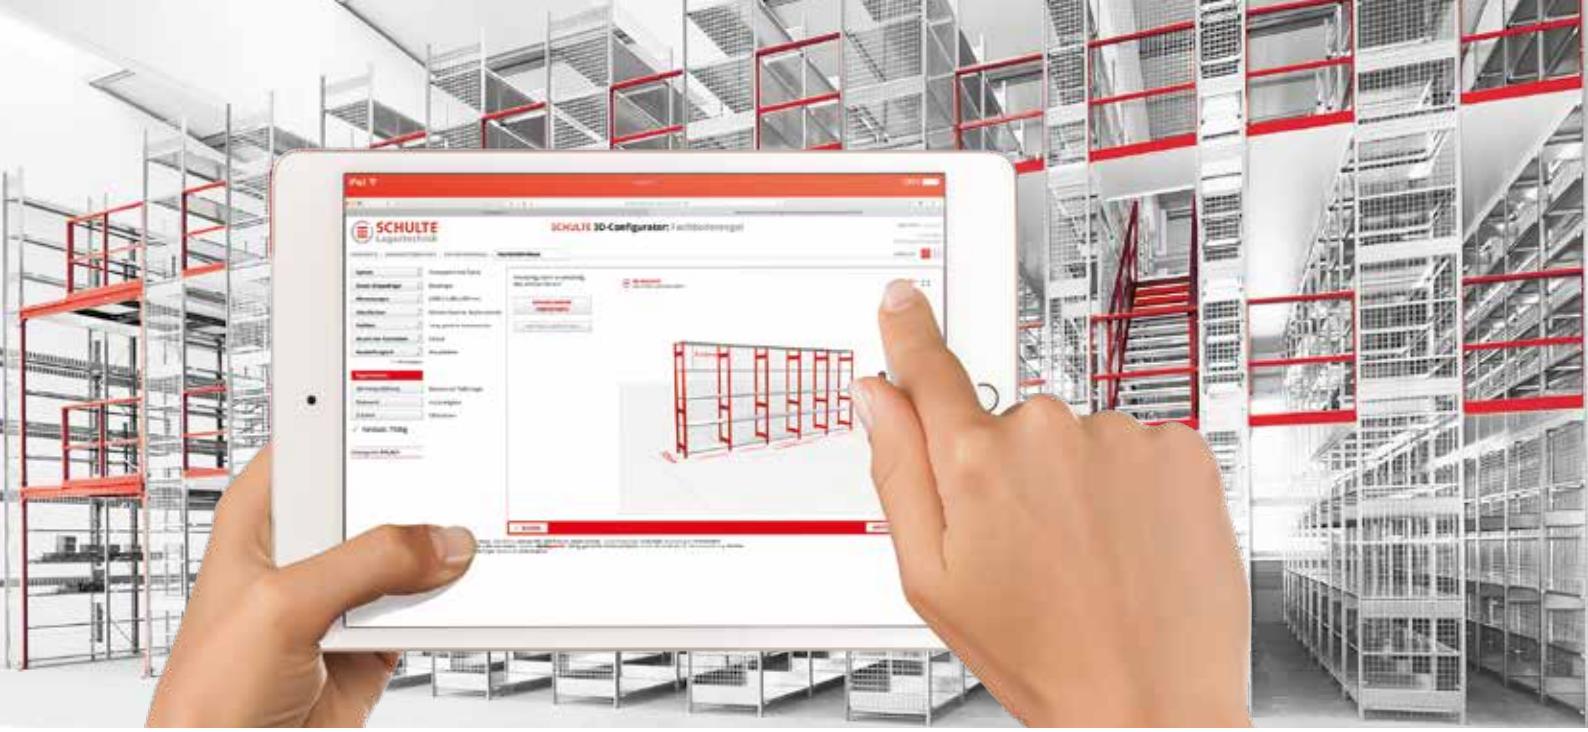

A range of aspects, such as architecture, surface area, goods flow and also costs, are incorporated into the planning in advance. This results in huge time savings and minimises potential errors.

The pCon-Planner is intuitive to operate and the results fulfil the increasing market demand for modern tender proposal creation. Our individual and customer-friendly offer preparation can significantly increase

the order probability and thus provide the user with a competitive advantage.

You have the flexibility to change the plans at any time and to implement them easily. The planning scenarios can be optionally viewed three dimensionally, as an image or a film. We are pleased to provide you with the software free of charge. In the SCHULTE Academy, we teach you the required skills to use the pCon planners.

» The **SCHULTE 3D-Configurator**

No matter whether its shelving systems, wide-span shelving, pallet racking or cantilever racking – with the SCHULTE 3D-Configurator for specialist dealers, the suitable system can be easily configured, visualised in real time and then issued as a finished offer.

Planning, offer and order

All customer projects can be saved via password-protected access and can be called up and changed at any time. Your individual price conditions are stored in your profile, so that your personal offer can be issued immediately. You can then easily convert this into an end customer offer - in your company design. You can also order your configurations directly from the application. It is also possible to enter known article numbers from the SCHULTE Lagertechnik main catalogue directly and order them in the corresponding quantity. The advantage for you here is that the most up-to-date prices are always stored in the application.

360° visualisation in real time

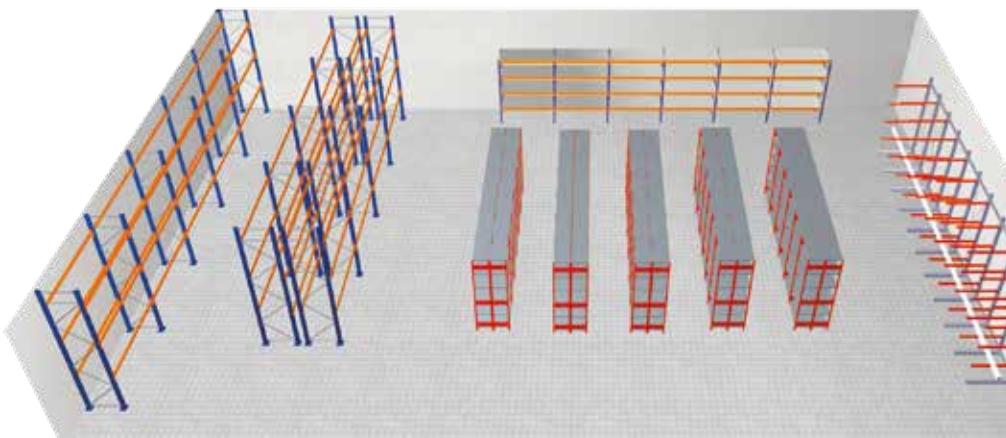

The information required for a configuration is queried in individual steps. On this basis, you can select and adjust the shelves you need. Every change is visualised in real time in a 360° view. This provides you and your customer with a realistic impression of the racking system at all times. The visualisation also includes

valuable technical information such as shelf heights and planning dimensions. The ready-configured racking or racking combinations can also be displayed in a hall - based on existing building dimensions. In this way, they can be arranged in a spatially optimal and logically efficient manner.

Quotation generation at the push of a button

In the SCHULTE 3D Configurator, the planning and quotation generation steps

run in parallel. Your configuration can be immediately output as a Configurator quotation. This quotation can be easily converted into an individual end customer quotation. This saves a lot of time, which you can use to advise your customers individually.

» Follow us on our Social media platforms

SCHULTE Lagertechnik goes social – on various social media platforms and our website you will find interesting topics on trade fairs, events and current projects. Take the opportunity and follow us!

The first row of social media links starts with the SCHULTE Lagertechnik website. Below the logo, there's a large image of a modern warehouse. Below the image are several smaller images and text snippets related to the company's services. To the right of the website is a QR code.

The second row begins with the SCHULTE Lagertechnik Facebook page. It shows a feed of posts, including photos of employees and products. To the right is a QR code.

The third row starts with the SCHULTE Lagertechnik YouTube channel. It displays a video thumbnail and some channel statistics. To the right is a QR code.

The fourth row begins with the SCHULTE Lagertechnik XING profile. It shows the user's profile information and activity feed. To the right is a QR code.

The fifth row starts with the SCHULTE Lagertechnik LinkedIn profile. It displays the user's profile and recent posts. To the right is a QR code.

The final row begins with the SCHULTE Lagertechnik Instagram profile. It shows a grid of recent posts featuring employees and products. To the right is a QR code.

» The **SCHULTE Academy** success training for our partners

In addition to internal training courses to strengthen the consulting competence and the professional knowledge of our employees, we also offer you a seminar and training programme in the SCHULTE Academy all about SCHULTE warehouse technology and warehouse logistics. Gain even more competence in consulting, planning and sales.

Arguments that hit the mark – from shelves to warehouse logistics

Sales success needs convincing arguments. SCHULTE Lagertechnik has the right offer, whether industrial racking, steel platforms or services. Our modern training centre, the SCHULTE Academy, offers you the opportunity to further develop your potential for success in practical seminars and training events. This means you not only have the right products, but also the right arguments safely on your side.

At the SCHULTE Academy, for example, you can expect:

- » Product training: our storage technology in all details
- » Dealer conferences: everything you need to know about successful sales
- » Training as certified shelf inspector
- » Training on software tools: Offer optimisation with tools like the pCon-Planner

And because there may be better arguments tomorrow than yesterday, we constantly update our training and seminar offer.

Storage technology explained by specialists

Profit from our know-how and gain competent knowledge of all racking systems in storage technology. Take the opportunity to advise your customers in the best possible way and commu-

nicate the advantages of the products of SCHULTE Lagertechnik with convincing arguments.

Use your full sales potential

Join us at the SCHULTE Academy on the road to success! We look forward to your participation! Information on the current range of seminars offered by the SCHULTE Akademie can be found in the partner area on our website.

» Clever storage solutions

from a single source

How do you arrive at the best storage solution? This issue spurs us on every day. It makes our site in Sundern into our core centre for expertise for consultation, planning and production. This is where we practice what defines us: high-quality, flexible and safe storage systems for high standards.

Advice

- We advise and plan individually for you
- Analysis of your requirements, your premises and your internal logistical processes
- 3D space utilisation concept designed for you
- Our warehouses for your customer-specific requirements

Manufacturing

- We combine sales, development and production
- With us you will find market proximity, product quality and solution competence under one roof
- Benefit from quality, tailor-made storage systems and personal support through years of experience

Assembly

- Rely on fast and smooth assembly
- Our fitters know the SCHULTE storage systems inside and out
- Everything is professionally installed in accordance with all safety criteria
- Your warehouse project is completed successfully and in compliance with the law

Service

- We provide you with prompt offers
- We meet our delivery dates
- Spare parts are also available at short notice
- We offer you numerous training courses at the SCHULTE Akademie

Security

- You can rely on the safety of our warehouses
- We offer shelf inspections of customer warehouses
- All Shelving systems are TÜV-tested and bear the RAL seal of approval
- We are a member of the Association for Storage Technology and Factory Equipment (LBE)
- Benefit from our ten-year availability guarantee on our shelving systems

» Plug-in shelving system

Modular, flexible, innovative

- Fast and simple installation, flexible retrofitting possible
- Modular adaptation of the shelving thanks to comprehensive range of system accessories and compatibility
- Offers single-sided or double-sided use
- Suitable for constructing double shelving and multi-level shelving systems
- High flexibility and easy exchange of the accessory parts thanks to the **MULTIplus** perforation system
- Loading and unloading by hand
- the load capacity of the **MULTIplus** shelves can be immediately recognised by the stamped mark in the front edges. This prevents overloading.

» MULTIplus T-profiles

Height can be varied
by increments of 25 mm

The perforation of the **MULTIplus** T-Profile in the SCHULTE Plug-in system takes place in a **25 mm grid**.

In combination with the **MULTIplus85** and **MULTIplus150** shelves, which also have a **edge height of 25 mm** have, this results in a unique flexibility of the height adjustability and storage capacity utilisation.

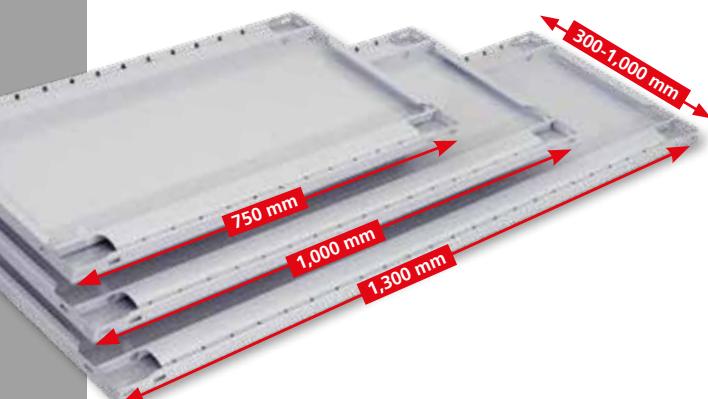

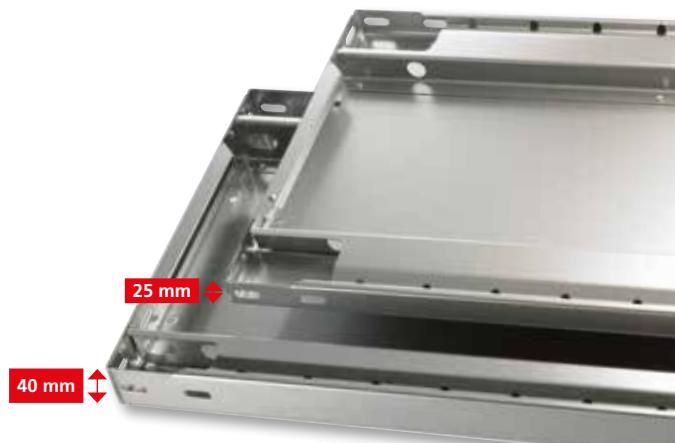

The coordination between grid and shelves enables an optimal adaptation to the goods to be stored and thus allows the highest possible utilisation of the shelf volume.

» MULTIplus shelves

» Variable edge heights of 25 and 40 mm

The shelves from SCHULTE Lagertechnik are available with edge heights of **25 mm** and **40 mm**. The load capacity of the Multiplus shelves can be immediately identified by the stamped mark at the front edge.

TIP Our **MULTIplus85** and **MULTIplus150** shelves offer you optimal use of the storage area with their 25 mm edge-height in combination with our 25 mm grid of T-profiles.

» Variable widths and depths for optimum adaptation

The SCHULTE Lagertechnik shelves are available in three different widths and a wide range of depths. This enables optimal adaption to the existing storage area and the stored goods.

» Variable shelf load capacity for all types of items

SCHULTE Lagertechnik offers four different types of shelf to suit the most diverse requirements on the load capacity of the shelf.

The **MULTIplus** shelves, **MULTIplus85**, **MULTIplus150**, **MULTIplus250** and **MULTIplus330**, can achieve shelf loads of 85 kg to 330 kg.

By optionally using beams, a load distribution can be achieved or, if necessary, a compartment load increase can be achieved (see page 79). We will be happy to advise you.

85 kg

150 kg

250 kg

330 kg

PLUG-IN SHELVING SYSTEMS

» A modular (plug-in) system for countless combination possibilities ...

All shelving units and the complete range of accessories can be combined. This enables the shelving to be individually customised to suit the industrial application.

Benefits:

- One single system for many different requirements
- Option of adapting the shelving at a later point in time
- Can be combined with WS 2000 wide span shelving (see page 166)

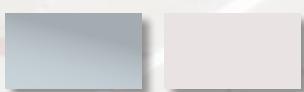

» Surfaces in a diverse range

All shelves and T-profile frames are sendzimir galvanised in the standard version or powder-coated in RAL 7035 light grey. The T-profile frames are also available in RAL 5010 gentian blue, RAL 3000 fire red and black.

Depending on the order size, special colours are also possible.

A photograph of a large industrial warehouse with multiple levels of red shelving units. The shelving is organized into bays, some labeled 'R1' and 'R2'. The ceiling has white fluorescent lighting. In the foreground, there is a display board showing color swatches and descriptions for the shelving surfaces and T-profile frames.

Shelf variations:

T-profile frame variations:

» Single-sided use

Bracing with cross brace

Mounted at the back, the cross braces provide stability for the plug-in shelving.

Benefits:

- Simple alignment of the shelving through turnbuckles on the cross braces
- Economical bracing variations
- Ideal for constructing rows of shelving in front of walls

Order examples of complete shelving units with cross braces can be found from page 25 onwards.

» Double-sided use

Bracing using face beams

Face beams are simply inserted into the hole grid of the **MULTIplus** T-profile frame and fixed with locking pins. This guarantees high stability.

Benefits:

- Bracing variations for two-sided fitting
- Less time and shorter routes thanks to access to the goods from both sides
- The goods can be pushed right through in both the single as well as the double shelving units

You will find ordering examples of complete shelving units with face beams from page 29 onwards.

PLUG-IN SHELVING SYSTEMS

» Shelving systems

with 25 and 40 mm edge height

Shelves are one of the most important components of a storage system and are therefore also designed for the optimal use of storage space and loads. The four **MULTIplus** shelf types allow shelf loads from 85 kg to 330 kg, depending on the weight of the stored goods. Simply select the right shelf and insert in every plug-in shelving system.

Our bestseller is the **MULTIplus150** shelf with its unique edge height of 25 mm for this shelf load. It handles loads of 150 kg and enables precise and optimal stocking of the warehouse thanks to the combination of the **MULTIplus** T-profile with the 25 mm grid perforations.

» 4 shelves

to suit all requirements

MULTIplus85

The sturdy one

- **85 kg shelf load:** for work clothing, electrical installation items or storage boxes, etc.
- **25 mm edge height**
- Ideal for storing light goods and as office shelving

25 mm

Our bestseller

MULTIplus150

The all-rounder

- **150 kg shelf load:** e.g. for tools, paint, metal goods
- Unique for the shelf load, **edge height of only 25 mm**
- Increase the shelf load to **220 kg** through optional reinforcing bearers

25 mm

MULTIplus250

The muscle man

- **250 kg shelf load:** e.g. for canisters, rolls of foil, cable bundles
- **40 mm edge height**
- Increase the shelf load to **330 kg** through optional reinforcing bearers

40 mm

MULTIplus330

The Titan

- **330 kg shelf load:** e.g. for machine parts, motors, ball bearings
- **40 mm edge height**
- Increase the shelf load to **410 kg** through optional reinforcing bearers

Planning

For complete shelving units, T-profiles and depth beams are supplied as standard in the version **MULTIplus** pluggable.

All complete shelving units include cross braces, cover caps and clamping feet.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep for an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:
Nominal length + 60 mm

Extension shelving:
Nominal length + 6 mm

Total frame depth:
Nominal depth + 36 mm

Buckling length:
All order proposals are statically designed for a maximum buckling length of 600 mm. Larger buckling lengths are possible on request.

Product features

- Bracing with cross brace
- simple alignment of the rack using turnbuckles on the cross braces
- Ideal for constructing rows of shelving in front of walls and as back-to-back double shelving
- Height of the shelves can be adjusted in increments of 25 mm
- Individual adaptation to spatial conditions and to the stored items with three shelf widths
- Faster assembly thanks to simple plug-in system for the shelves
- Economically priced bracing variations
- Increasing the Bay load possible, due to additional depth bolts

Bracing with cross brace

Cross braces to brace the shelving units make them optimal for single-sided use.

25 mm grid perforation

The perforation of MULTIplus T-profiles in a 25 mm grid guarantees an optimal storage capacity utilisation.

The new Expressline for top sellers

48 hours shipping from stock for the top sellers of complete shelves **MULTIplus150**.

What is shelf load and what is bay load?

The **shelf load** describes the maximum load of a single shelf with evenly distributed load.

The **bay load** describes the maximum permissible load of a shelf bay. It depends on the load capacity of the T-profile frames.

IMPORTANT: The sum of the actual shelf loads may not exceed the maximum bay load - according to DGUV regulation 108-007 (BGR 234).

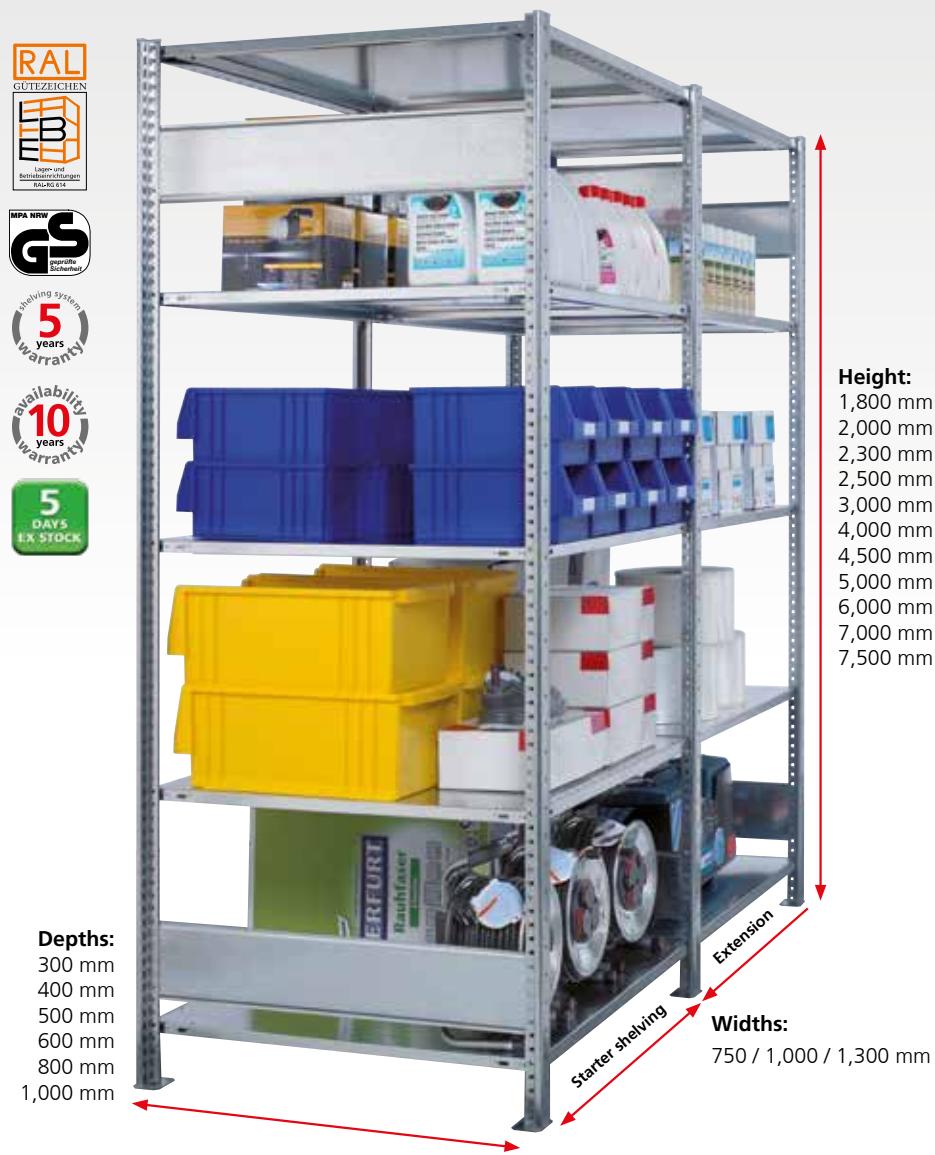

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

» Small parts storage
with optimum adjustment

» Shelving system

double-sided use · bracing with face beam

Planning

For complete shelving units, T-profiles and depth beams are supplied as standard in the version **MULTIplus** pluggable.

All complete shelving units include protective caps and clamping bases.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep at an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:

Nominal length + 60 mm

Extension shelving:

Nominal length + 6 mm

Total frame depth:

Nominal depth + 36 mm

Buckling length:

All order proposals are statically designed for a maximum buckling length of 600 mm. Larger buckling lengths are possible on request.

Bracing with face beams

Assembly using face beams makes it possible to use the shelving from both sides.

25 mm grid perforation

The perforation of MULTIplus T-profiles in a 25 mm grid guarantees an optimal storage capacity utilisation.

Product features

- Bracing with face beams
- Loading and unloading of the stock items possible from both sides
- Individualadaptation to spatial conditions and to the stored items with three shelf widths
- Height of the shelves can be adjusted in increments of 25 mm
- Faster assembly thanks to simple shelf plug-in system
- Shorter picking distances thanks to access from both sides
- Possible to increase the bay load through additional side elements

Why are shelves with face beams usable on both sides?

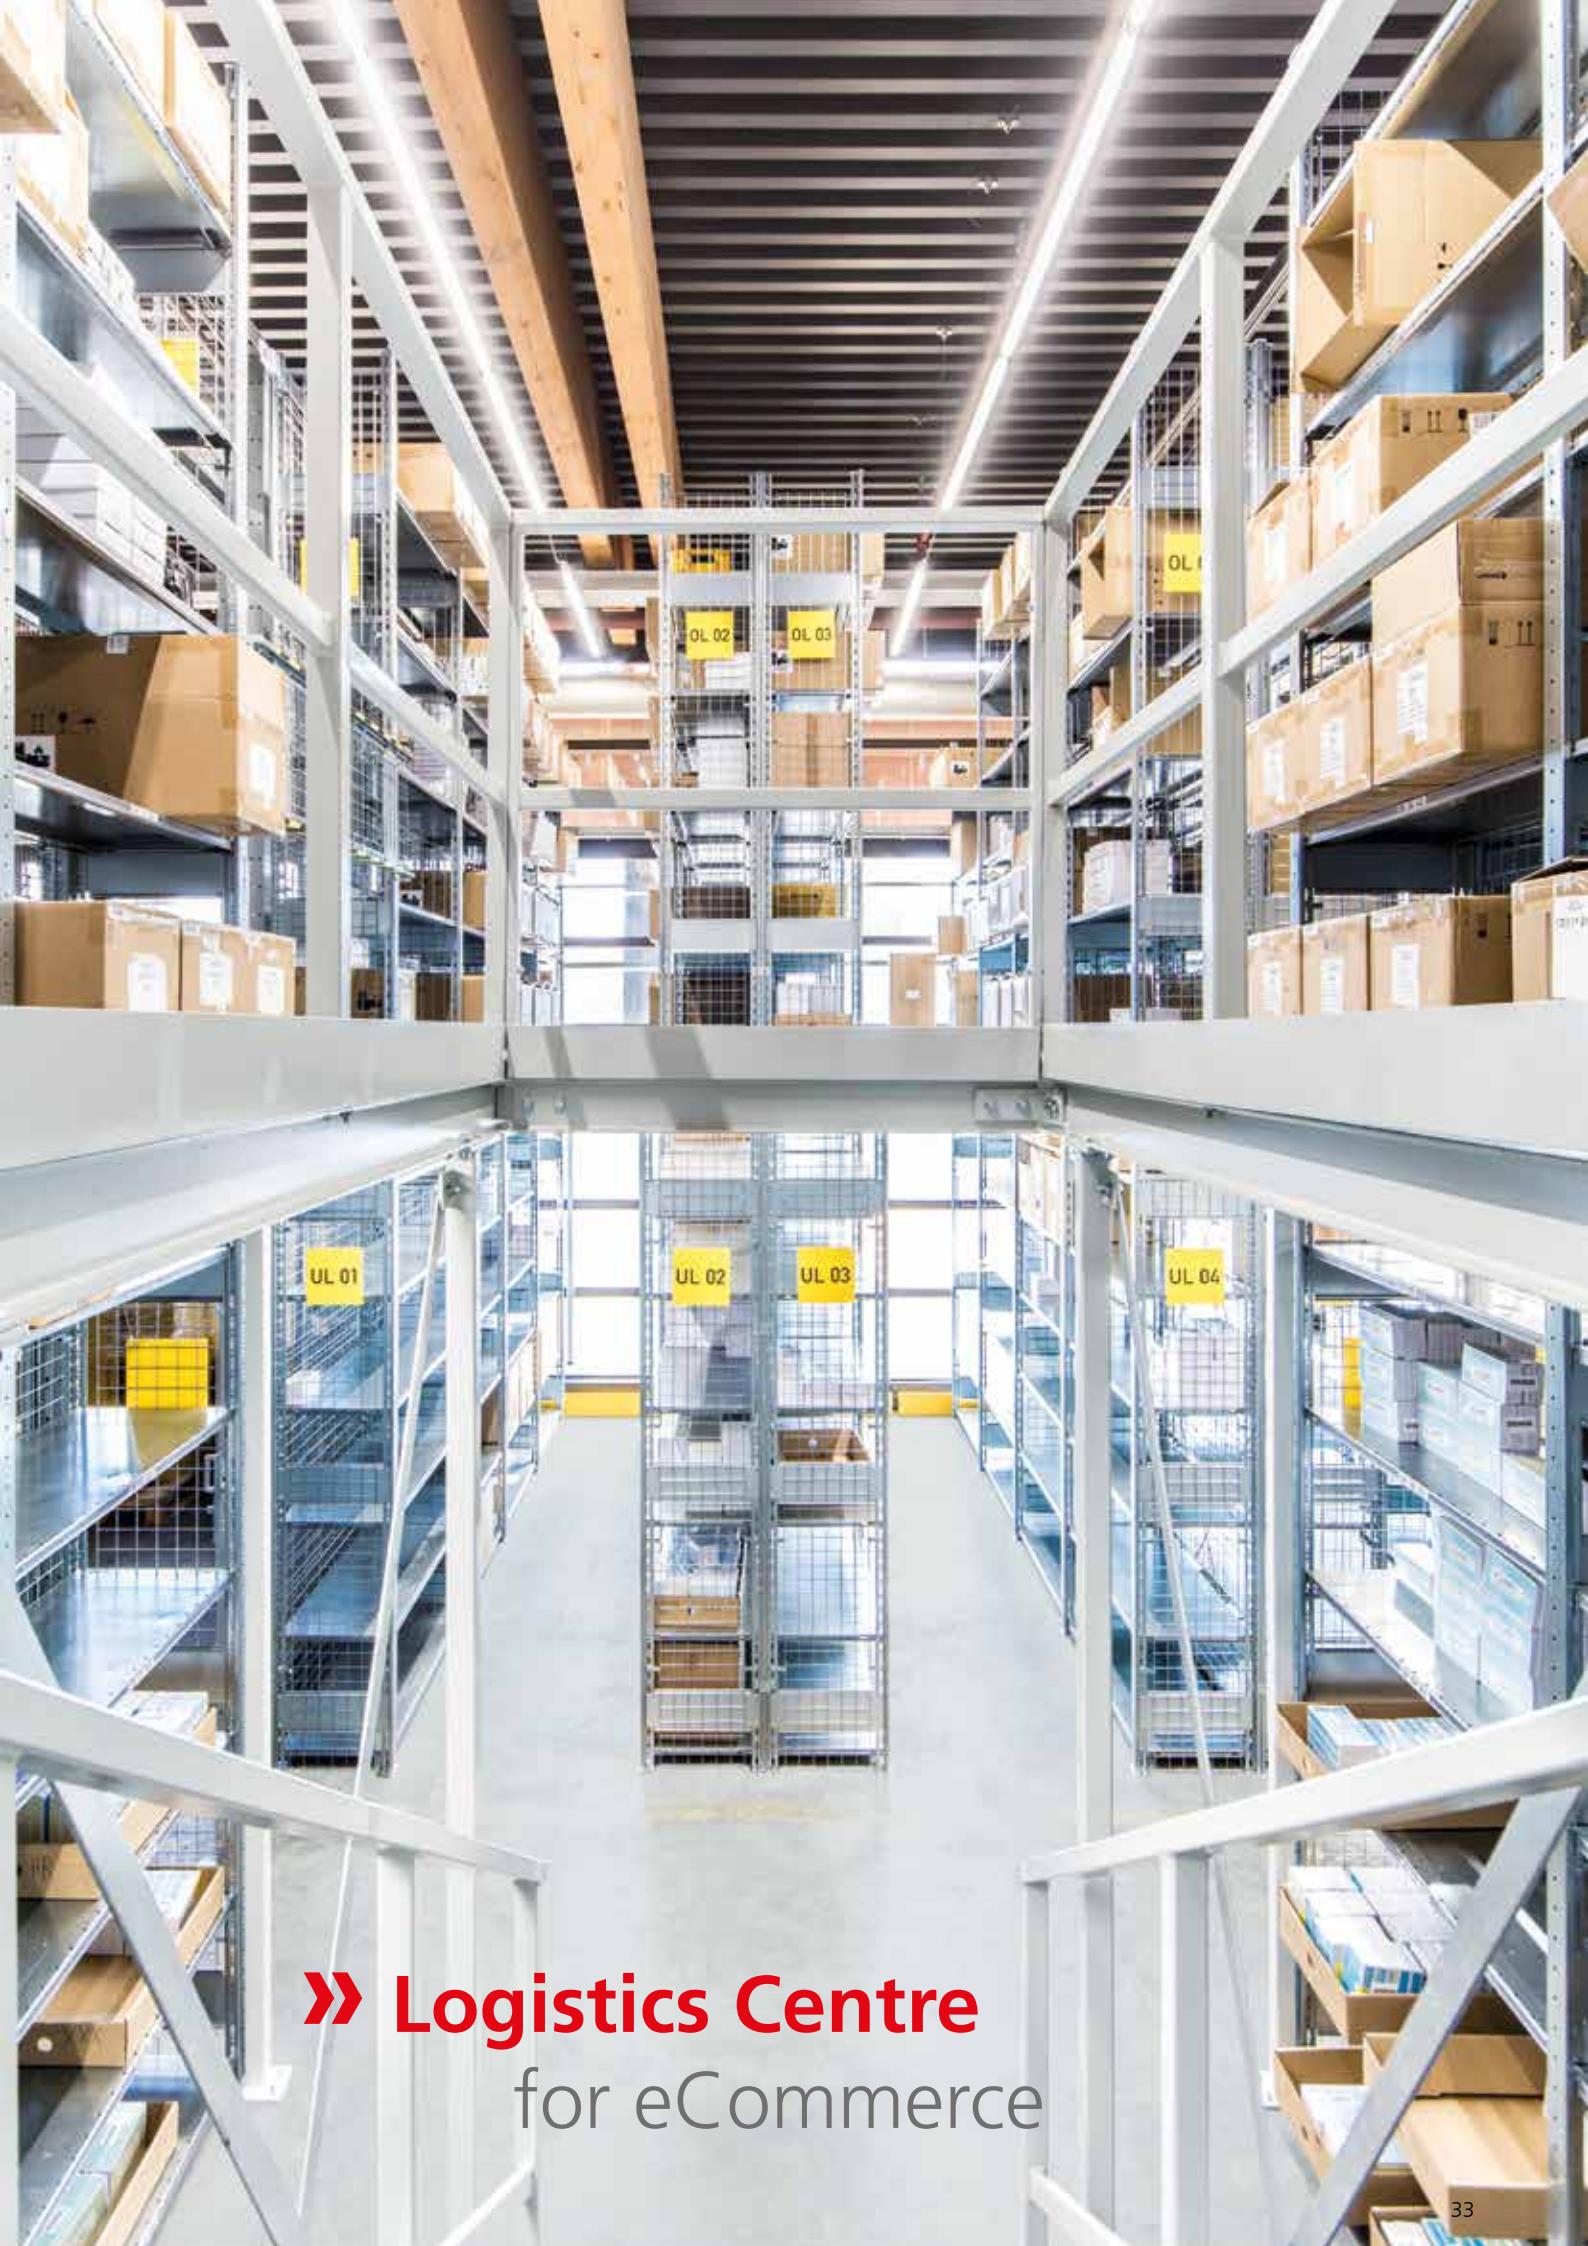

Racks that are braced with face beams, can be operated from both sides, the cross brace is not applicable here. This means that the stock goods are in particularly more accessible on deep shelves.

INFO: Shelves up to 2,000 mm height are assembled with 2 pairs face beams stiffened. Shelves up to 3,000 mm receive 3 pairs of face beams.

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Planning

For complete shelving units, T-profiles and depth beams are supplied as standard in the version **MULTIplus** pluggable.

All complete shelving units include protective caps and clamping bases.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep at an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:

Nominal length + 60 mm

Extension shelving:

Nominal length + 6 mm

Total frame depth:

(nominal depth + 36 mm) x 2

Buckling length:

All order proposals are statically designed for a maximum buckling length of 600 mm. Larger buckling lengths are possible on request.

Product features

5
DAYS
EX STOCK

- Structurally connected
- Heights available from 1,800 to 7,500 mm
- Back-to-back rows of shelving
- Large storage volume in a small area
- quick assembly by simply plugging in the shelves
- Possible to increase the bay load through additional side elements
- Height of the shelves can be adjusted in increments of 25 mm
- Bracing with cross brace

Connecting the individual shelving

The cross braces are attached with a connection plate and the T-profiles are directly mounted to one another.

» Double shelving

double-sided use · bracing with face beam

Planning

For complete shelving units, T-profiles and depth beams are supplied as standard in the version **MULTIplus** pluggable.

All complete shelving units include protective caps and clamping bases.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep for an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:

Nominal length + 60 mm

Extension shelving:

Nominal length + 6 mm

Total frame depth:

(nominal depth + 36 mm) x 2

Buckling length:

The free buckling length must not exceed 600 mm. Larger buckling lengths are possible on request.

Uninterrupted utilisation of the storage levels

The construction with face beams enables loading of the goods on the entire storage level up to 2 x 1,000 mm depth.

Height:
2,000 mm
2,500 mm
3,000 mm

Planning

For corner shelving units, T-profiles and depth ledgers are supplied as standard in the version **MULTIplus** pluggable.

All complete shelving units include protective caps and clamping bases.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep for an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Corner shelving bay A:
nominal length + 60 mm

Corner shelving bay B:
nominal length + depth bay A + 48 mm

Extension shelving bay C:
Nominal length + 6 mm

Total frame depth:
Nominal depth + 36 mm

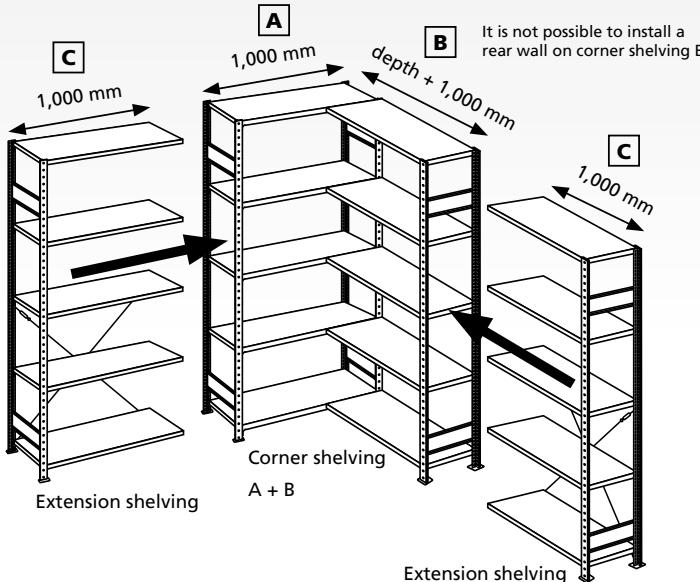

Corner solutions with suspension bracket

By mounting the shelves with suspension console, problem-free access is guaranteed up to the corner.

DAYS
EX STOCK

Product features

- Corner shelving with suspension brackets comprising A + B bays
- **All MULTIPLUS150** shelves of the corner shelving bay **A** are braced using face beams
- Stabilisation of the corner extension bay **C** with cross braces
- Optimal capacity utilisation of your storage spaces
- Faster assembly thanks to simple plug-in system of the levels
- Load capacity per shelf up to 150 kg
- The bay load for corner shelving is up to 1.2 tons
- The height of the levels can be adjusted in increments of 25 mm

» Faster isn't possible

AGRAVIS Technik is the leading service and technology specialist in the field of agricultural engineering in eastern and northern Germany. AGRAVIS Technik Sachsen-Anhalt/ Brandenburg GmbH covers the entire area of Saxony-Anhalt. Here, 190 qualified employees ensure that the customers' agricultural technology runs reliably. The central spare parts warehouse of AGRAVIS Technik-Gesellschaft, which operates nationwide, is located in Köthen.

Agricultural machines and vehicles work under the toughest conditions and AGRAVIS customers cannot afford to have a breakdown.

In order to prevent this from happening or to end it quickly in an emergency, AGRAVIS takes care of the fast and reliable supply of spare parts to its customers from its location in Köthen. These come from the region, but also to a large extent from the countries of Eastern Europe, to which AGRAVIS exports. In order to increase efficiency in the spare

parts business and to simplify and accelerate logistics processes, AGRAVIS invested in a new spare parts warehouse. SCHULTE Lagertechnik was commissioned with the planning and implementation. Customer consultant and planning specialist Frank Bier, in close coordination with the customer, attached particular importance to short distances and fast processes.

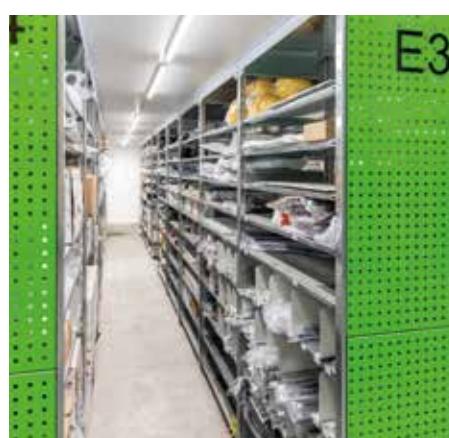

Short distances and fast processes

Since the warehouse stocks from two halls were to be concentrated in one, it was decided to use a two-storey system. Thanks to the clever combination of different shelf types from the SCHULTE storage technology portfolio, all parts are now clearly arranged in a very small space for fast access. The spectrum ranges from MULTIdplus shelving systems for small and medium-sized parts to pallet shelving for

long goods and large parts.

The highlight of the racking system is the combination with a conveyor technology. In the warehouse, the orders are assembled and then transported via conveyor systems to the shipping department in the adjacent hall. This saves walking distances and speeds up the overall process considerably. A further highlight, in addition to the colour design in company colours (RAL 6018), is the illumination by energy-saving, movement-controlled LED light strips.

What ultimately inspired the customer? The clever planning, the saving of space, the convincing aesthetics of the plant, the acceleration of the processes due to the clarity in combination with the conveyor technology, the integration of a lockable area for expensive GPS parts as well as the fast, smooth assembly by SCHULTE Lagertechnik involving all trades.

At a glance

Requirements

- » Fast spare parts handover into dispatch
- » Storage of spare parts of different sizes and weights
- » Clarity through clear structure
- » Easy to find and Order picking

Scope of work

- » Consulting, planning, delivery and assembly

Object data

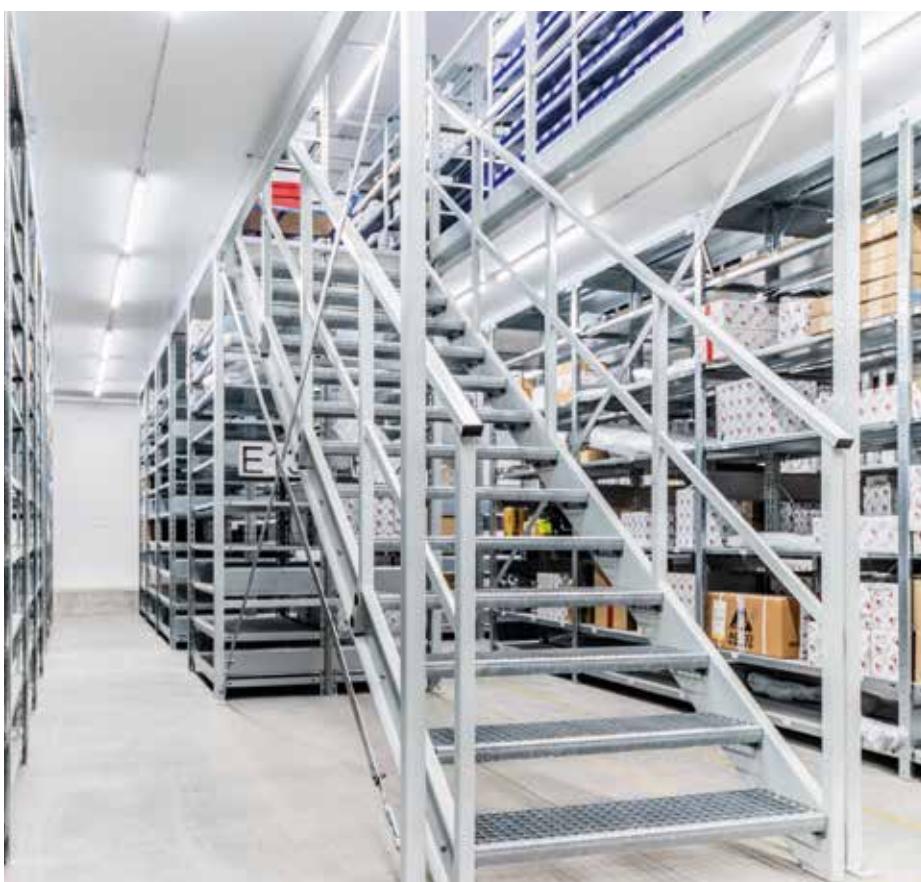

- » New construction of the spare and wear parts warehouse as a compact rack system
- » Use of 457 shelf frames, 5.000 MULTIplus shelves, 160 m² particle board (pallet racks), side panels in RAL 6018, 142 linear metres. LED light strips with sensor technology
- » Integration of conveyor technology

Special features

- » Consolidation of a two-hall warehouse into one hall
- » Coordination of all trades in planning and assembly

Benefits

- » Shorter distances and accelerated processes
- » Faster dispatch to the customer

» Special shelving

for specific applications

Plug-in shelving system

Divider guides

Side guides

Kanban shelving

With / without divider and side guides

Double-sided use

Properties

- 8 **MULTIplus150** shelves, of which 7 are sloped with 14° inclination and 1 straight cover base
- Optionally with 5 divider guides, 2 side guides (for width of 1,000 mm) or 7 divider guides, 2 side guides (for width of 1,300 mm)
- Ideal for plastic picking containers, storage boxes, cardboard boxes
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with face beams
- T-profile frames with 3 side elements and bases galvanised, face beam RAL 7035 light grey

Benefits

- ideal for "first-in-first-out" storage, as stored goods can slide on the smooth, galvanised shelves
- Optimal organisation of the stock items through horizontally adjustable divider guides (50 mm grid)
- Direct view and easy access through the slope of the shelves
- Faster assembly thanks to simple shelf plug-in system
- The front face beam is raised 15 mm and prevents the goods falling out

With divider and side guides

Side guides	10381-25	10382-25	10383-25
	2.16 €	2.36 €	2.76 €

The corresponding face beam can be found on page 83.

Image shows the 1,300 mm width version.
Suggested placement: 9 Euro stacking boxes 600 x 400 x 320 mm as shown, see page 111

Sloping shelving

For containers and boxes

Double-sided use

Properties

- 3 sloping levels **Multiplus150** shelves
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with face beams
- T-profile frames with 3 side elements galvanised, shelves galvanised, face beam RAL 7035 light grey

Benefits

- Direct view and easy access through the slope of the shelving levels
- The front face beam is raised 15 mm and prevents the goods falling out

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm		Starter shelving		Extension shelving
2,000	1,000	600		13697	221.05 €	13698
Additional level*	1,000	600		13699	38.37 €	13699
2,000	1,300	600		13680	255.50 €	13681
Additional level*	1,300	600		13684	49.85 €	13684

* Additional level consists of: 1 shelf, 1 standard face beam, 1 special face beam
see page 83 in accessories

Suggested placement: 30 Euro stacking boxes 400 x 330 x 210 mm as shown, see page 111

Sloping shelves XL

For containers and boxes

Double-sided use

Properties

- 5 sloping levels each with 2 **Multiplus150** shelves
- max. 150 kg shelf load per level
- Co-rotating and counter-rotating double shelving on request
- The height of the levels can be adjusted in increments of 25 mm
- Reinforcement by special face beams
- T-profile frame with 3 depth ledgers RAL 5010 gentian blue, face beams RAL 7035 light grey, shelves galvanised

Benefits

- Ideal for "first-in-first-out" warehouses, as stock items can slide through on the smooth, galvanised shelves
- direct view and easy access due to the inclined position of the shelves
- The front face beam is raised 15 mm and prevents the goods falling out

Shelf load 150 kg / bay load 900 kg

Additional level	1,300	1,200		38868	100.94 €	38868

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Supply shelving

With roller tracks for containers and boxes

Double-sided use

Properties

- 4 levels each comprising 1 front crossbar, 1 rear crossbar and 9 roller tracks
- Max. 180 kg shelf load per level
- Side elements mark the end of the levels
- The height of the levels can be adjusted in increments of 25 mm
- Bracing through front and rear crossbeams
- Guiderails optionally available as dividers
- T-profile frame with 4 depth ledgers RAL 5010 gentian blue, galvanised cheeks and roller bars

Benefits

- Ideal for first-in-first-out storage, as stock items slide across the roller tracks
- direct view and easy access due to inclined position of the levels

Shelf load 180 kg / bay load 1.2 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving
2,000	1,300	1,300	38870 1.275.32 €	38871 1.173.31 €

Guiderails as divider			38873 17.43 €	
Front crossbar 1,300 mm			33010 52.03 €	
Rear crossbar 1,300 mm			33011 52.03 €	
Roller tracks			33012 18.20 €	

*Additional level consists of: 1 front cheek, 1 rear cheek, 9 roller bars

* Max. load capacity per roller track 20 kg

Combination shelving

Shelves and sloping shelves with dividers

Double-sided use

Properties

- 6 **MULTIplus150** shelves, including 3 sloping levels each with 5 dividers incl. tilt protection and 3 straight levels
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with face beams
- Rack galvanised, face beam RAL 7035 light grey

Benefits

- Optimal distribution of the goods through horizontally adjustable dividers
- Stock items can slide through on the smooth, galvanised shelves
- Direct view and easy access through the slope of the shelves
- Front face beam and tilt protection to prevent the goods falling out

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving
2,000	1,000	500	14280 322.74 €	14285 277.04 €

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Long-goods shelving

For vertical storage of items up to approx. 2,200 mm

Single-sided use

Properties

- 1 **Multiplus150** shelf
- 2 universal kits each with 4 partitioning pipes 400 mm
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with face beams
- Galvanised

Benefits

- Optimal for wood strips, pipes, panels etc.
- Soft foam covering to protect sensitive items, e. g. refined metals

Shelf load 150 kg · bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving

Drawer shelving

With set of 3 drawers

Single-sided use

Properties

- 5 **MULTIplus150** shelves, 3 drawers each 100 mm and 1 ribbed rubber mat
- The height of the levels can be adjusted in increments of 25 mm
- Drawers and cover load capacity up to 70 kg each
- Up to 150 kg shelf load capacity per level
- Telescopic drawer slide with 100% extension of the drawers with inner dimensions of 856 x 425 mm
- Bracing with face beams
- Shelving unit galvanised, shelving drawers RAL 7035 light grey

Benefits

- Optimal and closed storing of small parts
- Drawers can be combined with insert boxes and slotted tray sets (pages 106-107)
- Handle strip with inscription label and protective foil

Shelf load 150 kg · bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Wire mesh basket shelving

For storage of small parts

Single-sided use

Properties

- With 4 mesh wire baskets 2,000 mm height and 5 mesh wire baskets 2,300 mm height each with 2 partition grids and 2 **MULTIplus150** shelves
- 35 kg load capacity per wire mesh basket
- Mesh size 27 mm
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with cross brace and face beam
- Shelving galvanised, wire baskets gloss galvanised

Benefits

- Direct view and easy access
- Variable application options
- Flexible partitioning by means of partition grids

Shelf load 150 kg · bay load 1.1 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving

Small parts shelving

With bulk goods trays and shelves

Single-sided use

Properties

- 6 **MULTIplus150** shelves
- 3 levels of bulk goods trays, each with 3 dividers
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with cross brace
- Galvanised

Benefits

- For organised storage of bulk goods and small parts
- Fast loading and unloading
- Inserting of additional dividers for further division of the bulk material possible (page 99)

Shelf load 150 kg · bay load 1.4 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving
2,000	1,000	400	14271 399.71 €	14276 350.45 €
		500	14270 421.44 €	14275 370.95 €

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Beverage crate shelving

For all conventional beverage crates

Single-sided use

Properties

- extremely robust, can be loaded up to 60 kg per level
- The height of the levels can be adjusted in increments of 25 mm
- Bracing through crossbeams
- T-profile frame in black, beverage crate inserts in silver-plated

Benefits

- Clearly displayed storage of different crates
- Beverage bottles can be taken out individually
- Faster assembly thanks to simple plug-in system of the levels

Shelf load 60 kg · bay load 300 kg

Height mm	Width mm	Depth mm	Levels	Crates per level	Starter shelving		Extension shelving	
1,800	400	300	3	1	37000-S	134.41 €	37002-S	93.04 €

Due to the dynamic load, wall or foot anchoring is necessary for these shelves (see pages 85, 89).

Wine racks

For storing bottles on their side

Single-sided use

Properties

- Up to 96 bottles per rack and 1 level for cardboard boxes
- The height of the levels can be adjusted in increments of 25 mm
- Bracing through crossbeams
- T-profile frame in black, bottle inserts and shelf in silver-plating

Benefits

- Fast loading and unloading
- Clearly displayed storage
- Faster assembly through simple inserting the bottle inserts

Bay load 300 kg

Due to the dynamic load, wall or foot anchoring is necessary for these shelves (see pages 85, 89).

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Garment wardrobe shelving

For professional and protective work wear

Double-sided use

Properties

- 3 **Multiplus150** shelves and 1 clothes rail
- The height of the levels can be adjusted in increments of 25 mm
- Bracing with face beams
- T-profile frames, face beam and bases galvanised
- clothes rail gloss galvanised

Benefits

- Optimal for hanging and flat storage of professional and protective work wear
- Ideal for changing rooms, workshops etc.
- Flexibility through option of changing the height of the individual storage bays

Shelf load 150 kg - bay load 500 kg

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving

Load capacity of the clothes rail: 750 mm = 50 kg, 1,000 mm = 45 kg, 1,300 mm = 40 kg

Hinged door cabinets

from plug-in system elements

Single-sided use

Properties

- 5 **MULTIplus150** shelves or for 1,000 mm depth
- 5 **MULTIplus250** shelves
- 1 hinged door incl. 3-point locking, keyed alike
- 1 rear wall and 2 side panels
- The height of the levels can be adjusted in increments of 25 mm
- available up to 1,000 mm depth
- Bracing with cross brace
- T-profile frames RAL 7035 light grey, shelves galvanised

Benefits

- Goods can be safely locked
- Dust-free and concealed storage
- Storage of cartons and articles up to 1,000 mm depth
- Easy to integrate into rows of shelving

» Small parts shelving sets

for optimal management of small parts

**SHELVING
INCLUDING
SHELVING
CONTAINERS**

Our small parts shelving sets offer you completely fitted-out shelving for the greatest possible storage density. Equipped with a range of shelving containers, you can perfectly organise your small parts on 15 levels with the **MULTIplus150** shelves.

Small parts shelving set 1

with 150 shelving containers

Properties

- 15 **MULTIplus150** shelves with shelving containers and 1 **MULTIplus150** cover shelf
- Bracing with cross brace
- Shelving galvanised

Benefits

- Optimal storage of small parts
- Greatest possible utilisation of the storage area

Set 1 comprising:

Plug-in shelving system

150 containers red (H x W x D): 83 x 93 x 300 / 400 / 500 / 600 mm

Shelf load 150 kg · bay load 2.4 t

Accessories for shelving containers can be found on page 110.

Small parts shelving set 2

with 110 shelving containers

Properties

- 15 **MULTIplus150** shelves with shelving containers and 1 **MULTIplus150** cover shelf
- Bracing with cross brace
- Shelving galvanised

Benefits

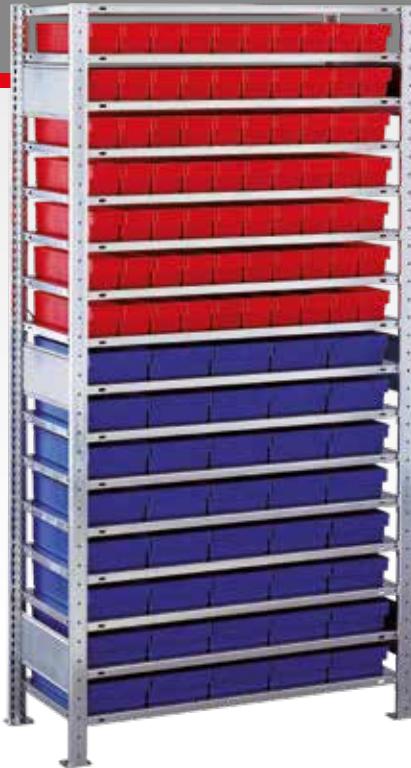

- Optimal storage of small parts
- Greatest possible utilisation of the storage area
- Use of colour to organise the items

Set 2 comprising:

Plug-in shelving system

70 shelving containers red (H x W x D): 83 x 93 x 300 / 400 / 500 / 600 mm

40 shelving containers blue (H x W x D): 83 x 186 x 300 / 400 / 500 / 600 mm

Accessories for shelving containers can be found on page 110.

» Quick and secure Spare parts logistics

Around 40,000 different spare parts items for agricultural machinery and equipment are kept in the new logistics centre of Landtechnik Vertrieb- & Dienstleistung Bernard Krone GmbH (LVD Krone). In the truest sense of the word "carried", the spare parts are carried by pallet and shelving systems of the company SCHULTE Lagertechnik, which meets the high requirements of the spare parts logistics of LVD Krone with a special racking concept.

The new LVD Krone Spare Parts Logistics Centre was built in just nine months. Up to 40,000 different spare parts now find their place on an area of approx. 3,900 m² and in the various shelving systems. In just under three weeks, the specialist fitters from SCHULTE Lagertechnik installed pallet shelving with 2,000 storage locations for narrow-aisle operation and shelving systems in which spare parts can be stored in 10,000 storage locations.

The extensive and diversified range of spare parts is assigned to the appropriate rack systems. This ensures that each storage space is used optimally and efficient order picking is also possible. In the pallet warehouse,

mainly larger parts are stored on pallets in the corresponding packaging.

In the shelving system, equipped with MULTIplus shelves, which offer 20 percent more storage capacity, smaller spare parts find their place in storage view boxes. For an optimal use of space, the individual shelving systems are currently arranged on two levels and are accessible via a storey system designed by SCHULTE Lagertechnik with a steel construction platform in front.

Located in a specially designed room that complies with the hazardous goods regulations, the oil storage area houses containers on pallets.

A well thought-out storage concept, developed in partnership between user and shelf manufacturer, ensures flexible reaction to customer requirements and a reliable spare parts supply 365 days a year and around the clock.

At a glance

Requirements

- » New logistics centre for safe and efficient spare parts storage

Scope of work

- » Consulting, planning, delivery and assembly

Object data

- » 40,000 different spare parts over 3,900 metres²
- » 2,000 storing positions on pallet racks
- » 10,000 storage locations from shelving systems with MULTIplus shelves
- » Storage areas with cantilever racking and steel platforms

Special features

- » Logistics centre consisting of four different storage systems

Benefits

- » Reliable spare parts supply with sophisticated storage systems
- » Optimal storage of spare parts of different sizes

» Automotive racking

for warehouses, workshops and garages

The storage of car parts requires both solutions for the storage of bulky goods and the possibility of storing sensitive goods (such as already painted body parts) without damage. Whether packaged goods, body parts, tyres or rims – with installation kits from SCHULTE Lagertechnik everything is in perfect hands.

Planning

In wheel racks, two tyre crossbeams form one storage level each. These are to be hooked into the T-profiles like face beams. Tyre racks are suitable for the material-friendly storage of wheels and tyres. The 25 mm grid allows flexible adaptation to all inch sizes.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Recommendation:

Due to the dynamic load, we recommend securing all tyre racks against tipping.

The specified loads apply to evenly distributed loads per storage level.

Assembly measurements

Starter shelving:
Nominal length + 60 mm

Extension shelving:
Nominal length + 6 mm

Total frame depth:
Nominal depth + 36 mm

Storage that is gentle on the tyres

Due to specially shaped tyre crossbeams wheels, tyres and rims are optimally and carefully stored.

Rounded wide span beams

The storage of the large compartment wheel racks takes place on rounded beams with spans up to 2,500 mm.

Product features

- tyre-friendly storage through optimised tyre crossbars or storage on rounded wide-span beams
- Shelving for small, medium and large parts
- All automotive racks have grid perforations at increments of 25 mm
- Can be combined with the complete plug-in system
- Full range of accessories
- Special automotive racking sets
- Can be individually adjusted to the different sizes of the wheels, tyres and rims
- Faster assembly thanks to simple plug-in system of the levels

» Garage shelving set

Packaged ready for pickup in cardboard box

Garage shelving set ... for wheels and more

Properties

- Double-sided use
- incl. 2 **MULTIplus150** shelves and 2 wheel levels with 150 kg shelf load each
- Depth 400 mm, shelf width 1,000 mm
- Delivery includes separate T-profiles
- Conveniently packaged in a cardboard box
- Bracing through tyre crossbeams
- Galvanised

Benefits

- Space-saving storage of your summer or winter tyres as well as tools and small parts in the garage
- Ideal for transporting by car and for sending with a parcel service
- quick assembly by simply plugging the shelves and crossbeams

Wheel racking

With crossbeams that are gentle on the tyres

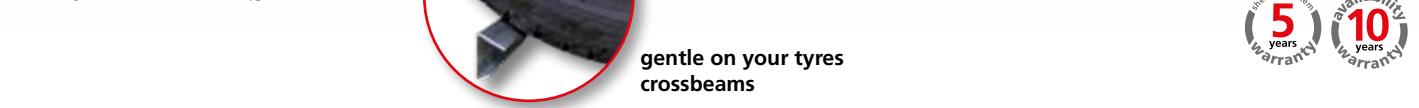

Double-sided use

Properties

- insertion and removal of the wheels on both sides
- can be combined with the **MULTIplus** Plug-in system and the large compartment wheel rack
- Up to 150 kg load capacity per level
- The height of the levels can be adjusted in increments of 25 mm
- Bracing through tyre crossbeams
- Galvanised

Benefits

- Storage that is gentle on the wheels through specially shaped crossbeams
- optimised height 2,750 mm for storage of SUV wheels
- Can be variably used for wheels with 550-750 mm Ø

Storage levels	3	3	3	3	3	3	3
Tyres per rack	12	12	12	12	12	12	18

The racking assemblies are only examples. For other tyre sizes, the number of tyres in the different rack widths can also increase.

» Container shelving sets

suitable for 20 and 40 foot containers

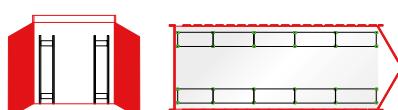

The racks are designed for non-portable systems. The container must not be transported with assembled tyre racking.
Container and assembly not included in delivery.

Container shelving set

For 20 foot containers

■ **1 set comprises:**

- 8 bays each 1,150 mm wide, each with 3 levels for 4 wheels up to 245 mm
- 2 bays each 1,000 mm wide, each with 3 levels for 4 wheels up to 205 mm
- Height of uprights 2,000 mm
- Capacity: 30 set / 120 wheels
- Load capacity per level 150 kg
- Optimal storage thanks to tyre crossbeams
- Galvanised

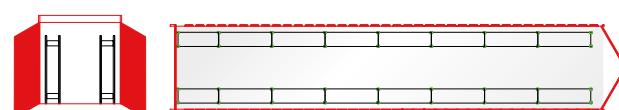

Galvan.- pos.	Height mm	Width mm	Depth mm	Capacity Set	Rows of racking
	2,000	5,684	400		
				30 sets 120 wheels	20979
					1,070.57 €

Container shelving set

For 40 foot containers

■ **1 set comprises:**

- 14 bays each 1,500 mm wide, each with 3 levels for 6 wheels up to 225 mm
- 2 bays each 1,150 mm wide each with 3 levels for 4 wheels up to 245 mm
- Height of uprights 2,000 mm
- Capacity: 69 set / 276 wheels
- Load capacity per level 150 kg
- Optimal storage thanks to tyre crossbeams
- Galvanised

Galvan.- pos.	Height mm	Width mm	Depth mm	Capacity Set	Rows of racking
	2,000	11,752	400		
				69 sets 276 wheels	20980
					1,882.85 €

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Large bay wheel racking

with wide-span beams

Double-sided use

Properties

- Loading and unloading of the wheels possible from both sides
- Up to 400 kg load capacity per level
- A central side connector per level connects the levels together
- Can be combined with all plug-in shelving systems
- The height of the levels can be adjusted in increments of 25 mm
- Bracing through wide-span side rails
- Galvanised

Benefits

- Storing of min. 2 sets per level possible
- optimised height 2,750 mm for storage of SUV wheels
- Can be variably used for wheels with 550-750 mm Ø

» Wellness holidays for wheels with gentle tyre crossbeams

The owner-managed automobile trading company Stegelmann, incidentally the sixth oldest Volkswagen dealer in the world, has succeeded in accommodating 5,000 wheel sets in a space 5.5 metres high, 50 metres long and 18.8 metres wide.

This system allows the company to optimally map its seasonal business and all its processes from a practical and economic point of view over a six-month time-frame. The system is two-storey and makes full use of the room's height. Both levels are 2.70 metres high and all tyres are within easy reach.

Three four-row shelves form the core of the system. The hall width is optimally utilised with two double-row and one single-row rack row, each towards the hall wall. In the four-row racks, the sets are stored in pairs one behind the other, in the two-row racks in

sets next to each other. This means that there is 80 cm of space in the aisles when the shelves are full. This is sufficient to transport the wheels with trolleys. Crossways ensure short distances, stairs and a floor lift transport several wheel sets to the upper floor level.

The warehouse consists of a plug-in system that can be used very flexibly especially for wheel storage. Four different shelf widths cover all tyre sizes and offer high variability. The height can also be changed in a 25 mm grid during operation. The shelf levels carry a load of 150 kg and can therefore also store tyres with rims. A special advantage of the system: The crossbeams, on which the weight is pressed for six months, are adapted in their shape to the stored goods and thus protect the wheels.

At a glance

Requirements

- » Installation of a newly built warehouse with a two-storey tyre rack system

Realisation

- » Consulting, planning and assembly

Object data

- » approx. 400 wheel racks for the careful storage of approx. 5,000 sets of wheels in various dimensions
- » Shelving from 1,050 to 1,200 mm wide and 5,200 mm high with 150 kg tyre crossbeams
- » Integrated shelf lift for safe transport of the wheels to the upper level

Special features

- » Careful storage due to special tyre crossbeams

Benefits

- » Efficient handling of the high expenditure during the seasonal peak periods

» Environmental shelving

for certified safety

The safe storage of substances hazardous to water is a particular challenge. Oils, paints and thinners can be stored in small containers in a professional and environmentally friendly way thanks to the environmental shelving from SCHULTE.

Planning

For complete shelving units, T-profiles and depth ledgers are supplied as standard in **MULTIplus** pluggable.

If you require pre-assembled frames, these are riveted at the factory up to 2,500 mm high and 600 mm deep for an extra charge (see page 83).

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 300 mm and a height of 2,000 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:

Nominal length + 60 mm

Extension shelving:

Nominal length + 6 mm

Total frame depth:

Nominal depth + 36 mm

containment tray:

Starter shelving: 1,096 x 570 mm

Extension shelving: 1,005 x 570 mm

Tray base

Any potential leaking liquids are safely collected.

Spill containment

The spill containment tray prevents seepage of liquids into the ground.

Wire mesh base

Direct run-off of leaking liquids through wire mesh base into the fully weld-sealed containment tray.

Product features

- Proper storage of water-polluting substances
- Small container shelving, available in different versions
- Containment trays with declaration of conformity (ÜHP) according to StawaR
- in case of leaking liquids, the containment trays prevent seepage into the soil or ground water

Water Resources Act - WHG

Storing water-polluting substances in containment trays

The purpose of this law is to ensure the sustainable water management the water bodies as part of the balance of nature, as the basis of human life, as habitat for animals and plants and as a usable resource to protect.

Small container shelving

With shelves and containment trays

Double-sided use

Properties

- 5 **MULTIplus150** shelves and 1 containment tray
- Containment tray volume (height: 83 mm):
Starter shelving = 37 litres / Extension shelving = 34 litres
- Incl. declaration of compliance in accordance with German regulations on steel containment trays
- Height of the shelves can be adjusted in increments of 25 mm
- Bracing with face beams
- Galvanised

Benefits

- tightly welded containment tray made of 3 mm galvanised sheet steel prevents liquids from seeping into the floor
- Shorter warehouse walking times thanks to two-side access

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving		Extension shelving	
2,000	1,000	500	14944	427.86 €	14945	369.61 €

Containment tray extension bay	1,005	570			14944-A	195.62 €

Small container shelving

With grating shelf and containment tray

Double-sided use

Properties

- 4 grating shelves, each 150 kg shelf load,
1 MULTIplus150 cover shelf and 1 containment tray
- Containment tray volume (height: 83 mm):
Starter shelving = 37 litres / Extension shelving = 34 litres
- Incl. declaration of compliance in accordance with German regulations on steel containment trays
- Mesh 30 x 30 mm, bearing bar 25 x 2 mm
- Height of the grating shelf can be adjusted in increments of 25 mm
- Bracing with face beams
- Galvanised

Benefits

- direct drainage of escaping liquids through grating shelves into a tightly welded containment tray made of 3 mm galvanised sheet steel
- Shorter warehouse walking times thanks to two-side access

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving		Extension shelving	
2,000	1,000	500	14946	724.12 €	14947	665.87 €

Containment tray starter shelving	1,096	570	14944-G	208.18 €		
Containment tray extension bay	1,005	570			14944-A	195.62 €

Environmental spill containment shelving

Safety at all levels

Double-sided use

Properties

- 4 environmental container trays and 1 **MULTIplus150** Cover shelf
- Up to 150kg load capacity of the tray with 60 mm edge height
- Incl. declaration of compliance in accordance with German regulations on steel containment trays
- Volume of the environmental container trays:
depth 500 mm = 18 litres / depth 600 mm = 22 litres
- Height of the containment tray can be adjusted in increments of 25 mm
- Bracing with face beams
- Galvanised

Benefits

- Environmental container trays made of 3 mm galvanised sheet steel safely catch any leaking liquids
- Shorter warehouse walking times thanks to two-side access

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving
2,000	1,000	500	14870	921.21 €
Additional container tray with 4 universal supports	1,000	500	14872	198.36 €
2,000	1,000	600	14875	989.16 €
Additional container tray with 4 universal supports	1,000	600	14877	214.07 €

Spill containment shelving

Safety at all levels

Double-sided use

Properties

- 4 containment trays and 1 **MULTIplus150** cover shelf
- Up to 150kg load capacity of the tray with 60 mm edge height
- Volume of the containment trays:
depth 500 mm = 18 litres / depth 600 mm = 22 litres
- Height of the containment tray can be adjusted in increments of 25 mm
- Bracing with face beams
- Galvanised

Benefits

- Container trays made of 1.5 mm galvanised sheet steel safely catch any leaking liquids
- Shorter warehouse walking times thanks to two-side access

Shelf load 150 kg / bay load 1.3 t

Height mm	Width mm	Depth mm	Starter shelving	Extension shelving
2,000	1,000	500	14940	585.23 €

2,000	1,000	600	14942	618.25 €
Additional container tray with 4 universal supports	1,000	600	14992	121.35 €

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

» Food shelving

made of stainless steel or anodised aluminium

Properties

- Suitable for catering and food processing businesses
- Shelves up to 150 kg load capacity

Benefits

- Stainless steel: food safe, also suitable for the storage of unpackaged food
- Stable thanks to height-adjustable bases and cross braces

- Hygienic and easy to clean
- Quick to install by simply plugging in the bases
- Flexible use through option of corner installation

Planning

The complete racks are supplied with pre-assembled frames.

The specified load capacities apply to evenly distributed loads per shelf.

The shelves have an edge height of 40 mm.

Hint:

Not compatible with the SCHULTE plug-in system.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf with a depth of 300 mm and a height of 2,000 mm must be secured by wall anchoring.

Assembled dimensions

Starter shelving: Nominal length + 50 mm

Extension shelving: Nominal length + 25 mm

Total frame depth:

Nominal depth = frame depth
Base dimension = nominal depth - 59 mm

Bay load:

Aluminium shelves up to 800 kg
Stainless steel shelves up to 1,200 kg
Shelves can be hung at increments of 150 mm

» The **accessories** from **SCHULTE Lagertechnik** for optimised management of your stored goods

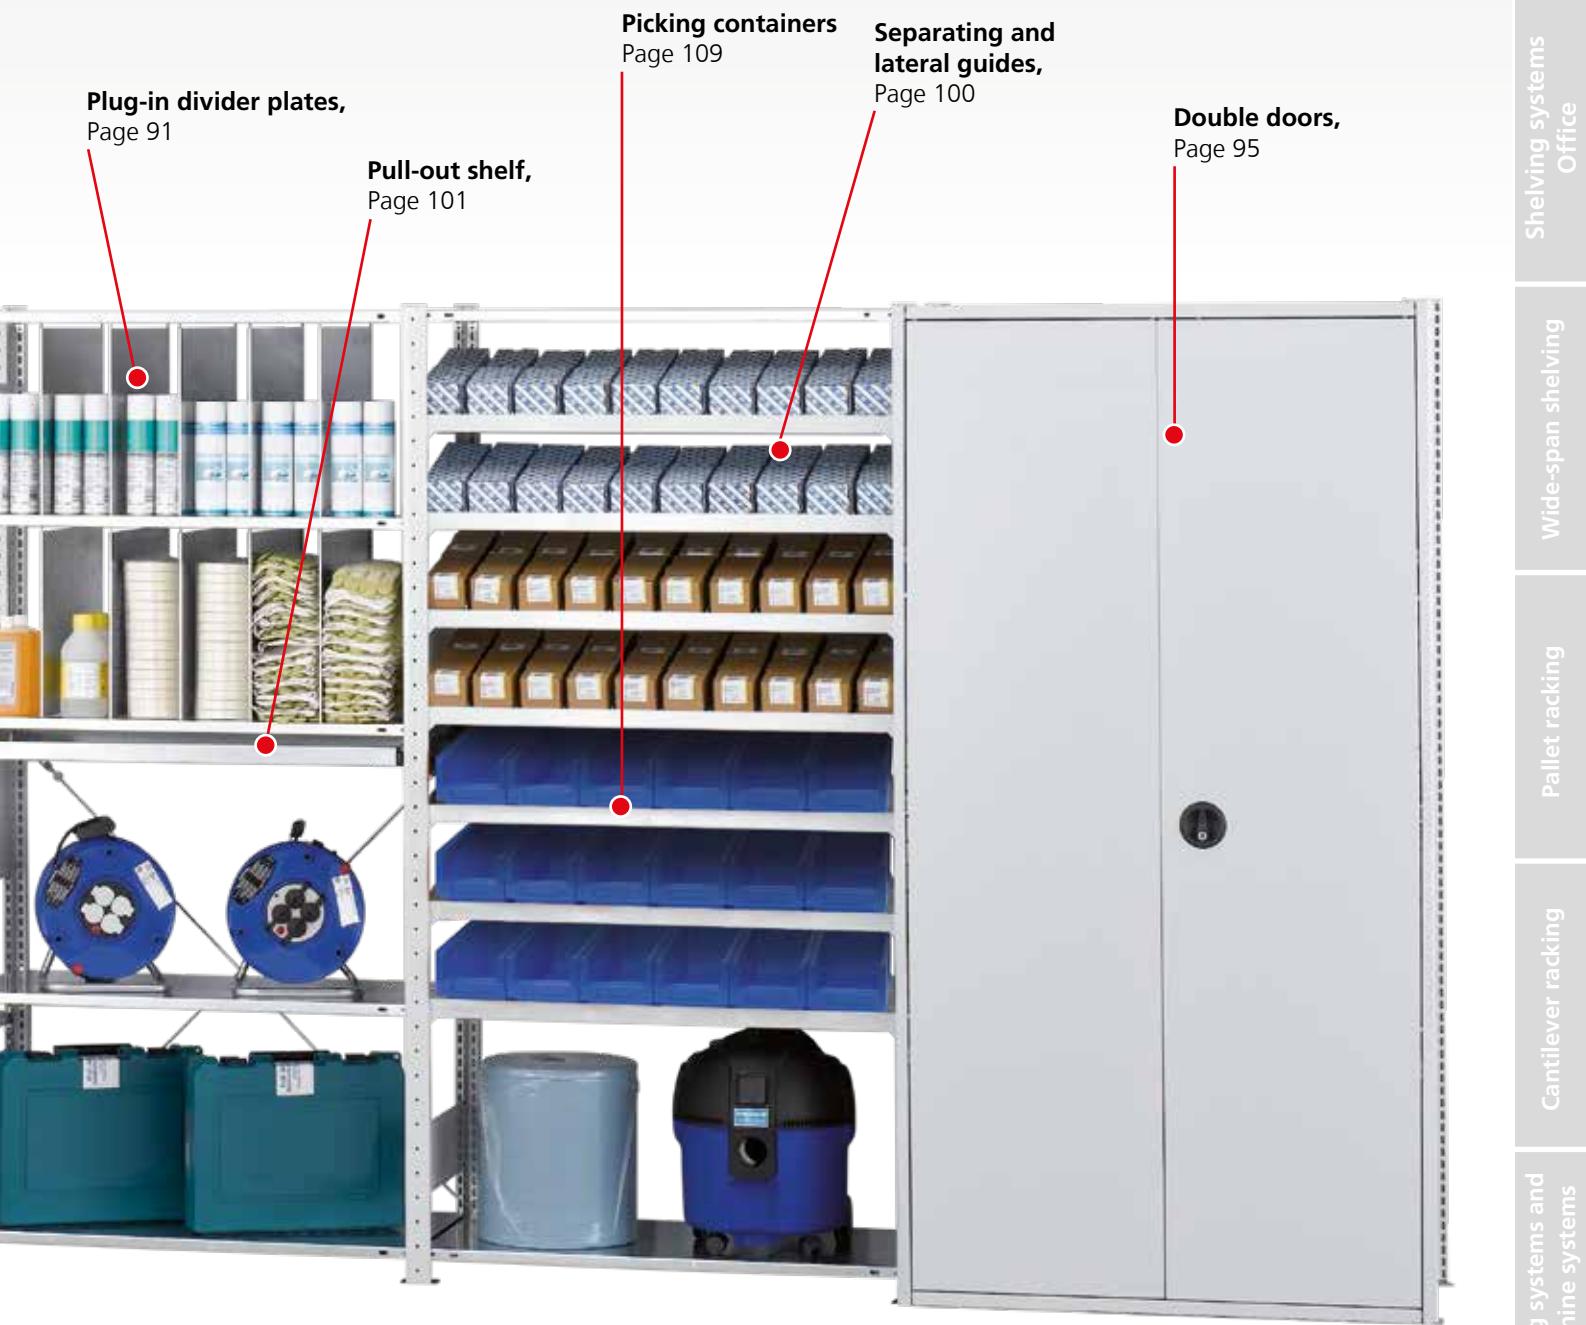

With versatile system modules and accessories specially tailored to the target groups, SCHULTE Lagertechnik enables you to organise your storage space more efficiently and thus optimise small parts management. Small parts are in your direct field of vision and quickly at your fingertips. This saves space and valuable time. This instantly increases workflow efficiency.

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

Your benefits at a glance

- Increase speed of the picking process
- Optimise the shelving according to the application
- Storage of hazardous goods in compliance with the standards
- Flexible partitioning
- Clearly organised storage room

» Das **MULTIplus** plug-in system

efficient utilisation and ergonomic advantages

The perforation of the **MULTIplus** T-Profile in the Plug-in shelving system from SCHULTE Lagertechnik takes place in a 25 mm increment. In combination with the **MULTIplus85** and **MULTIplus150** shelves, which also have an edge height of 25 mm, there is a unique flexibility of height adjustability and storage capacity utilisation.

The coordination between grid and shelves allows optimal adaptation to the goods to be stored and thus allows the highest possible utilisation of the shelf volume.

Due to the low 25 mm edge you can also create more levels per bay than with comparable higher insert edge heights and achieve a lower positioning of the shelves. This leads to order picking with much more ergonomic operability.

» More storage levels with same shelf height

- Increase in storage levels with the same rack height
- with over 10 shelf bays you save a whole shelf

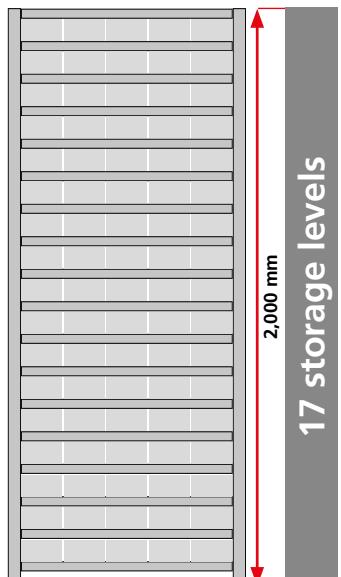

» Ergonomic operation due to lower overall height

- ergonomically advantageous operation due to optimised gripping heights
- shorter picking distances due to faster removal of the goods

High quality and high load capacity

5 DAYS EX STOCK

- **Environmentally friendly connection technology:** Clinching instead of welding

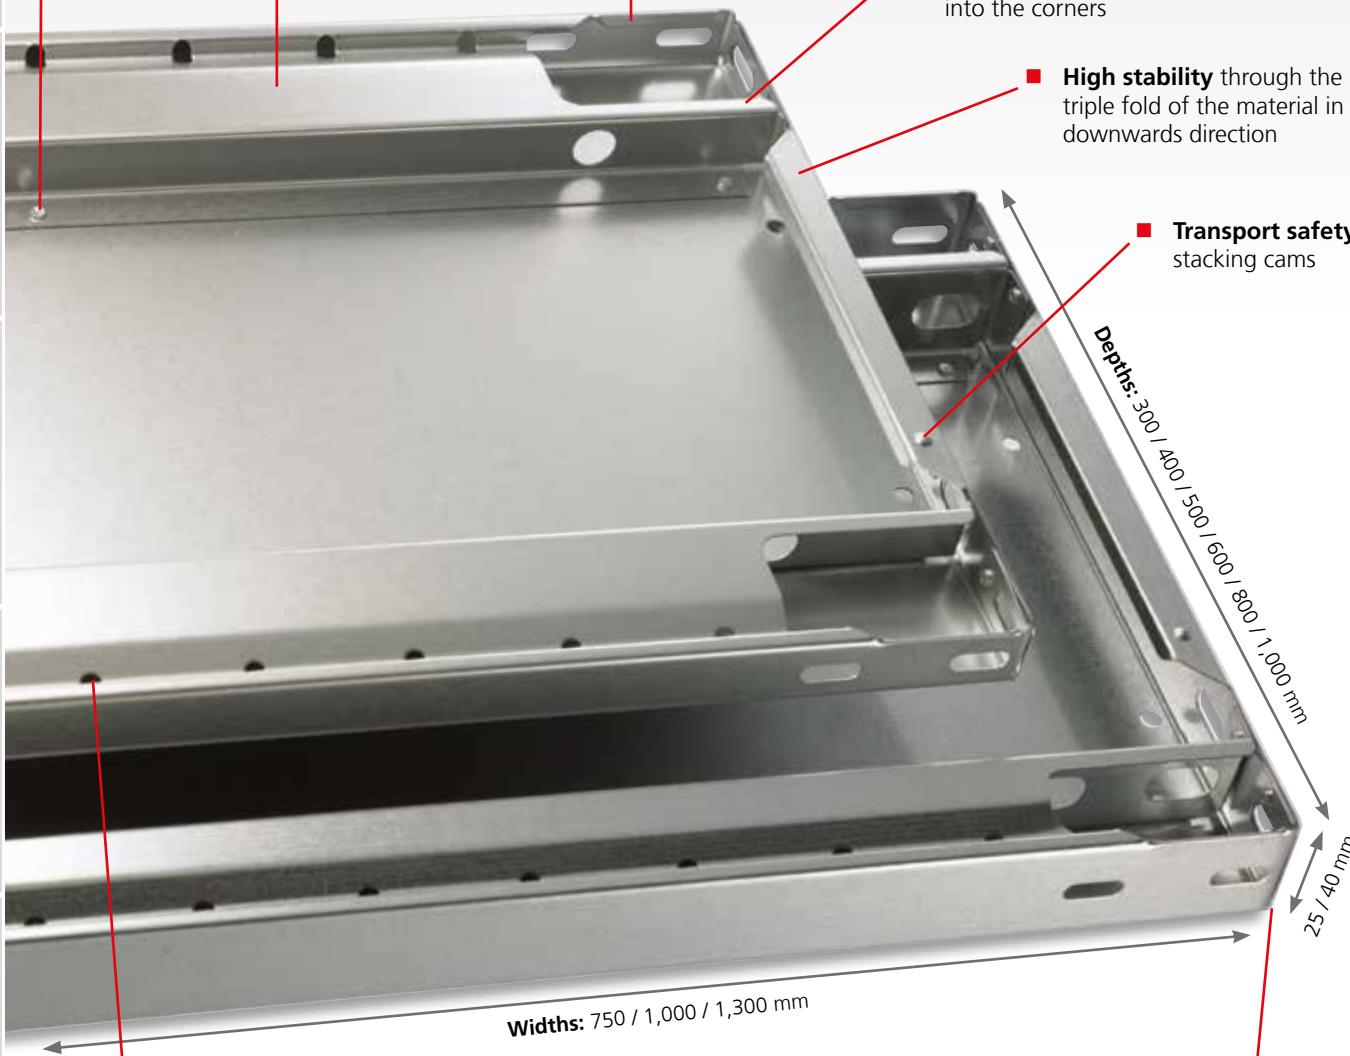

- **Optimised box shape** increases the load capacity per shelf by up to 25%

- **Additional bracing** through material doubling at the supporting edges
- **Easy to plug** into the shelf supports

- **Maximum stability** by extending the box profile right into the corners

- **High stability** through the triple fold of the material in downwards direction

- **Transport safety** by stacking cams

- **Perforation system** for easy attachment of accessories such as plug-in dividers or plug-in wire mesh panels.
Distance of the system perforation: 50mm

» Multiplus T-profiles

High quality and high precision

25 mm perforation and edge height

Optimum combination of the 25 mm grid perforation of the **MULTIplus** T-profiles and the 25 mm edge height of **MULTIplus85** and **MULTIplus150** shelves.

System perforation

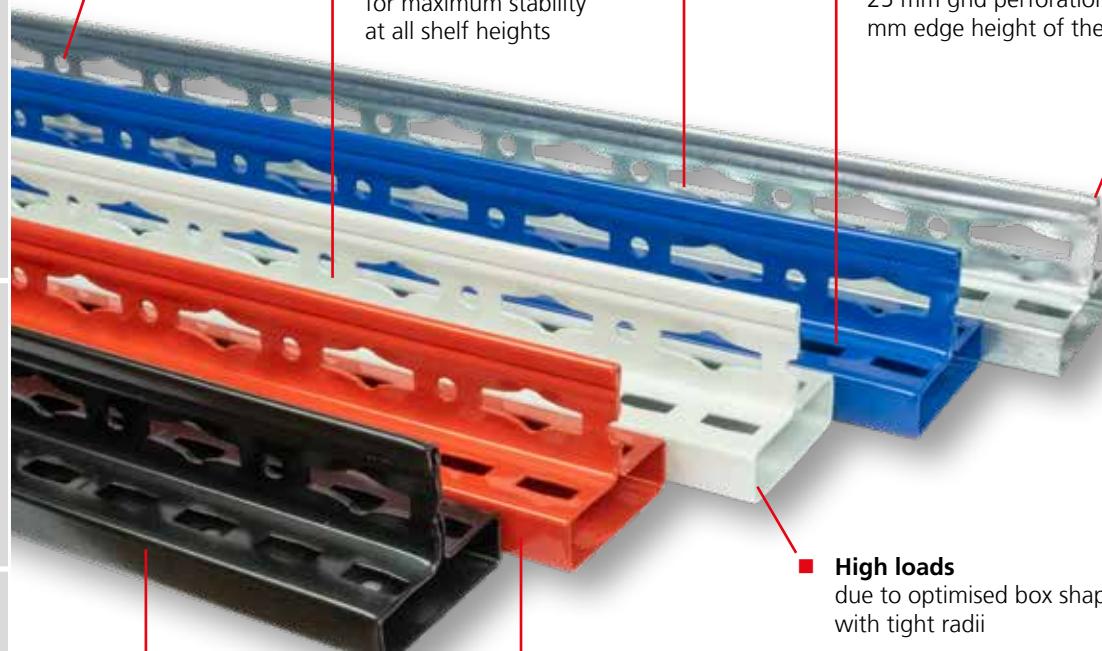

with height markings for easy connection of the system components

Butterfly perforation

for mounting the depth ledgers

Optimal use of space through 25 mm grid perforation and 25 mm edge height of the shelves

Maximum stability through flanged web with additional beading

5 colours
available as standard

Meets the highest requirements
for manufacturing tolerances, in particular parallelism, crowning and freedom from torsion

High loads
due to optimised box shape with tight radii

MULTIplus T-profile

Plug-in

- For assembly of **MULTIplus** T-profile frames
- From a height of 3,000 mm, suitable for subsequent addition of another storey (multi-tier shelving)

When using 330 kg shelves, please request special T-profile frames with an amended number of side elements.

Complete shelving units with preassembled T-profile frames

For complete shelving units, the T-profiles and side elements are not supplied assembled.

If you would like preassembled frames, these are riveted at the factory at an additional charge. Due to transport reasons, we only riveted frames up to a height of 2,500 mm and depth of 600 mm. Please add an "-M" to the article number (e.g. 12750-M).

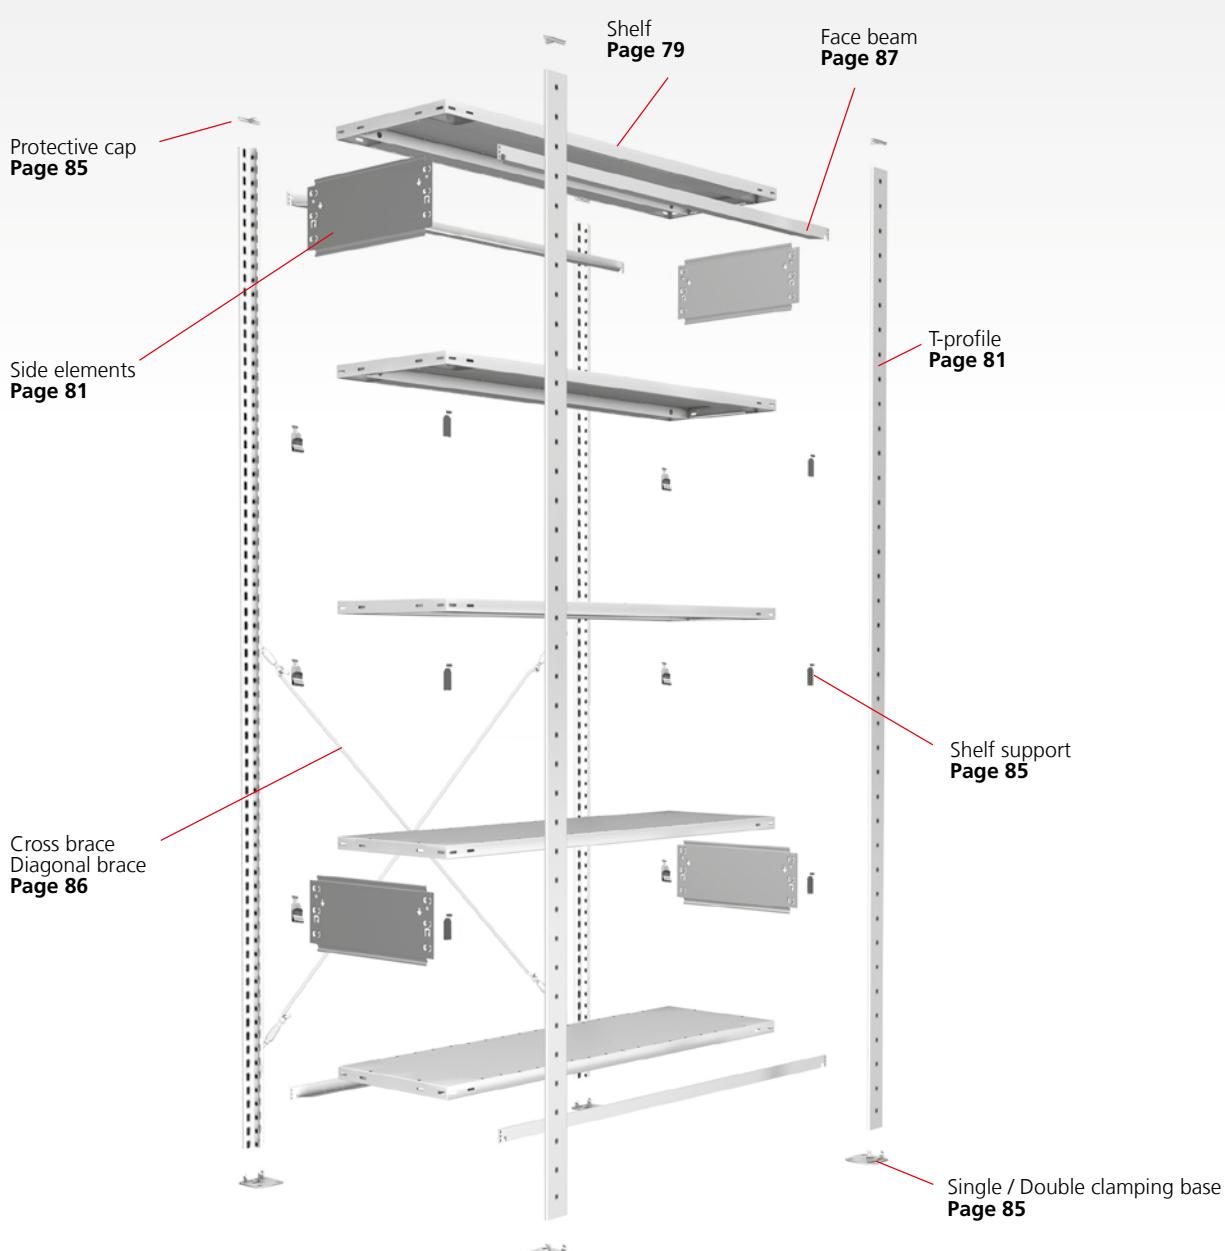

Shelf height:	Additional charge Starter shelving:	Additional charge Extension shelving
2,000 mm	17.40 €	8.70 €
2,300 mm	20.60 €	10.30 €
2,500 mm	26.30 €	13.15 €

Prices apply only to T-profile frames with shelves up to 250 kg.

Accessories

Overview of the plug-in system

Components and component parts

Shelf support for MULTIplus shelves

- for hooking the shelves into T-profile frames
- 4 pieces required for each shelf
- Galvanised

for MULTIplus85 MULTIplus150	29150	0.25 €
for MULTIplus250 MULTIplus330	39250	0.48 €

Universal supports

For wooden shelves and wire-mesh shelves, etc.

- for the laying of wooden floors etc. in T-profile frames
- 4 pieces required for each shelf
- Up to 200 kg load capacity per level
- Galvanised

For wooden shelves, wire-mesh shelves	10337	2.76 €
--	-------	--------

Single clamping base For MULTIplus T-profiles

- For secure assembly of plug-in shelving
- Galvanised

For shelves containing magnesium, separating foil must be laid underneath the clamping bases.

Clamping base	15280	0.49 €
Separating foil	12693-TF	2.37 €

Double clamping base

For MULTIplus T-profiles

- For secure assembly of the middle T-profile for double shelving bays
- Galvanised

For shelves containing magnesium, separating foil must be laid underneath the clamping bases.

Clamping base	15281	0.96 €
Separating foil	12692-TF	3.94 €

Base plate

For single and double clamping bases

- 2 mm thick, to compensate for floor unevenness
- Galvanised

Base plate Single clamping base	12694	0.49 €
Base plate double clamping base	12695	0.96 €

Protective cap

For MULTIplus T-profiles

Faster assembly of the shelving bay in just a few steps

Bracing with cross braces

Every 2nd shelf must be braced with cross braces. For assembly, use the prescribed minimum number of cross braces:

Up to a shelving height of 2,500 mm = 1 cross brace
Up to a shelving height of 3,000 mm = 2 cross braces
Up to a shelving height of 4,500 mm = 3 cross braces

Bracing with face beams

For assembly of shelving systems with face beams, use the provided minimum number of cross braces:

Up to a shelving height of 2,000 mm = 2 cross braces
Up to a shelving height of 3,500 mm = 3 cross braces
From 3,500 mm shelving height = on request

When using 330 kg shelves, the specified number of cross braces or face beams changes!

All prices without fitting. The tables show ordering examples. Other dimensions and versions on request.

» Drawer units

Ideal workplace addition for storage of small parts

Ribbed rubber
für Schubladenblöcke optional

For plug-in shelving systems or freestanding

- Welded steel construction
- Handle strip with labelling field and cover foil
- Drawers with single pull-out stop
- 70 kg load capacity per drawer with evenly distributed load
- Division of the stored goods by drawer dividers and dividers optionally available
- safe storage through central locking
- Special drawer unit for combining with wing doors 1,000 mm

Planning

- Freestanding or integrated into the SCHULTE Lagertechnik plug-in system.
- Drawer units must be installed when the shelves are assembled.
For subsequent installation is the partial disassembly of the existing shelves is necessary!

Safety

- Freestanding drawer units and shelves with drawer units must be **secured against tipping**.
- Single pull-out stop
- Roller guide rails, extendable up to 90 %
- Drawers with end stop

Assembly measurements

Drawer base:
856 x 425 mm

Aluminium handle strip:
800 mm wide

Total height of the drawer unit:
Sum of drawer heights
+ 100 mm cabinet height

» Aluminium Ladders

for safe operations at the shelving units

SCHULTE Lagertechnik provides a wide range of aluminium ladder models to ensure safe access to the upper shelf levels. Whether mobile with rollers or firmly fixed to the shelving unit, all our ladders are easy to use and extremely stable. All ladders feature ribbed steps for a high degree of anti-slip safety.

Aluminium step ladders

Single-sided access, with rollers

- High degree of anti-slip safety with 80-mm deep, ribbed steps
- permanent step/beam connection
- safe stand due to 4 self-locking spring rollers, diameter 80 mm
- Load capacity per step 150 kg
- Rigid connection through metal stays on both sides, which can be released
- optimised ladder-joint 'safe-cap'
- 6-fold riveting and higher wall thickness for even more stability and durability of the ladder
- non-slip nivello®-ladder shoes
- Ladder widths from 620 to 800 mm, step distance 235 mm
- Ladder inclination 20°

Wide-span shelving

Pallet racking

Cantilever racking

Shelving systems and
mezzanine systems

» Bolted system

robust, versatile, inexpensive

- The economically priced system for one-story rows of shelving
- Assembly through bolting in the angle profiles and shelves
- All shelving can be used from both sides
- high flexibility and easy changing of accessories due to system perforation with **MULTIplus** shelves
- Manual loading and unloading
- The load capacity of the **MULTIplus** shelves can be immediately identified by the stamped mark on the front edge. This prevents overloading.

» Angle profiles

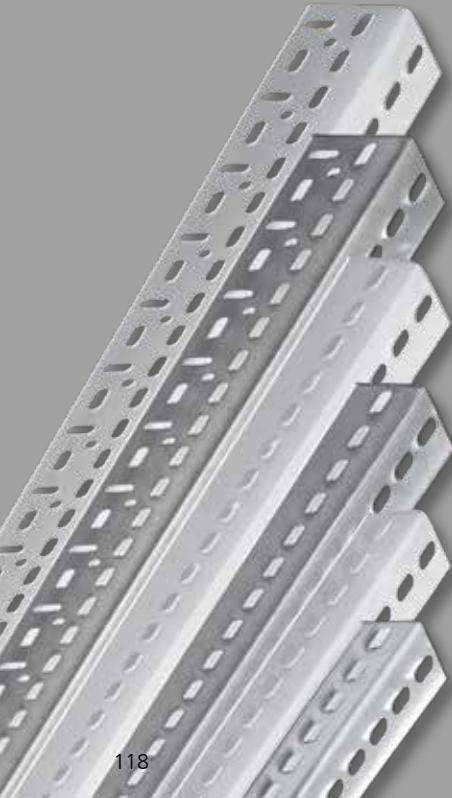

Height can be varied by increments of 25 mm

The angle profiles are available in two different versions, depending on the intended application.

A range of dimensions and material strengths ensure high stability for every shelving unit.

The perforation of the angle profiles in the SCHULTE bolted system takes place in a 25 mm grid. In combination with the **MULTIplus85** and **MULTIplus150** shelves, this enables unique flexibility when it comes to adjusting the height.

You save space due to small assembly dimensions with long shelf rows due to slim angle profiles.

SHELVING RACKS BOLTED SYSTEM

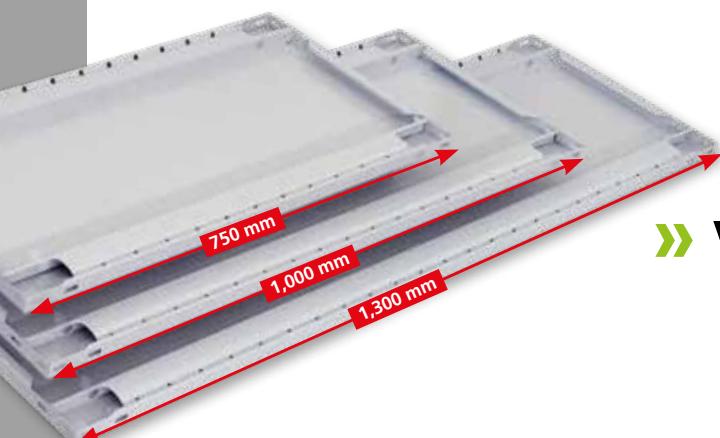

» MULTIplus shelves

With edge heights of 25 and 40 mm

The shelves from SCHULTE Lagertechnik are available with edge heights of **25 mm and 40 mm**.

The load capacity of the shelves can be immediately recognised by the stamped mark in the front edges.

TIP Our **MULTIplus85** and **MULTIplus150** shelves with their 25 mm edge height offer you in combination with our 25 mm grid of T-profiles an optimal use of the storage space.

» Variable widths and depths for optimum adaptation

Shelves for the bolted system are available in four different widths and a wide range of depths. This enables optimal customisation to the existing storage area and the stored items.

» Surfaces

two variants

All shelves and angle profiles are sendzimir galvanized or powder-coated in RAL 7035 light grey available.

Galvanised

RAL 7035
light grey

SHELVING RACKS BOLTED SYSTEM

» Double-sided use

Bracing through corner angle

The bolted system by SCHULTE Lagertechnik is assembled using **corner angles**; the angle profiles and shelves are connected to one another.

This achieves optimal bracing for the shelving. For the number of levels to be braced, please refer to the assembly instructions.

» Scope of delivery

Already coordinated with the shelving unit

All shelving with **MULTIplus85** and **MULTIplus150** shelves is delivered with 35 x 35 mm angle profiles and plastic feet.

Fillister head bolts with hexagon head are included for assembly.

Shelving with **MULTI250 shelves** shelves are supplied with 40 x 40 mm angle profiles and steel bases. Assembly is carried out using a hexagon socket wrench.

» Three edgy characters

with 25 and 40 mm shelf edges

Our bestseller is the **MULTIplus150** shelf with its unique edge height of 25 mm for this shelf load. It handles loads of 150 kg and enables high storage density thanks to the combination of the angle profiles with 25 mm grid perforations.

The **MULTIplus85** is particularly suited for light items and storage boxes with a shelf load of 85 kg.

The **MULTIplus250** can handle loads of 250 kg and is therefore particularly suited for heavy goods.

MULTIplus85

The sturdy one

- **85 kg shelf load:** including for workwear, electrical installation articles or storage boxes
- **25 mm edge height**
- Ideal for storing light goods and as office shelving

25 mm

Our bestseller

MULTIplus150

The all-rounder

- **150 kg shelf load:** e.g. for tools, paint, metal goods, packaged goods
- Unique for the shelf load,
edge height of only 25 mm

25 mm

MULTIplus250

The muscle man

- **250 kg shelf load:** for example for canisters, foil rolls, cable bundles
- **40 mm edge height**

40 mm

» Shelving systems

Double-sided use · bracing through corner angles

Planning

The specified load capacities apply to evenly distributed loads per shelf. For bolted shelving, the load capacity and stability is achieved by the corner angles. For the number of levels to be braced, please refer to the assembly instructions.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

With the bolted system, the anti-tilt device (screw connection to the wall) can be made directly through the perforation of the angle profile. Additional fastening materials on the shelf are then not necessary.

Assembly measurements

Starter shelving:
Nominal length + 6 mm

Extension shelving:
nominal length + 3 mm

Total frame depth:
Nominal depth + 6 mm

Buckling length:
The first shelf must be inserted at a height of 100 mm. The free buckling length shall not exceed 500 mm. Larger buckling lengths are possible on request.

Bracing through corner angle

The bracing of the shelves with corner angles is optimal for use on both sides.

Product features

- Bracing with corner angles
- Loading and unloading of the stock items possible from both sides
- Short picking routes
- Assembly through bolting in the shelves
- Height of the shelves can be adjusted in increments of 25 mm
- Individual adaptation to spatial conditions and to the stored items with 3 shelf widths
- Economically priced alternative to the plug-in system

Shelf load or bay load?

The shelf load describes the maximum load capacity of an individual shelf with a uniformly distributed load.

The bay load describes the maximum permitted load capacity of a shelving bay.

IMPORTANT: The sum of the actual shelf loads may not exceed the maximum bay load - according to DGUV regulation 108-007 (BGR 234).

» Angle profiles

Variable classic in streamlined design

25 mm perforation and edge height

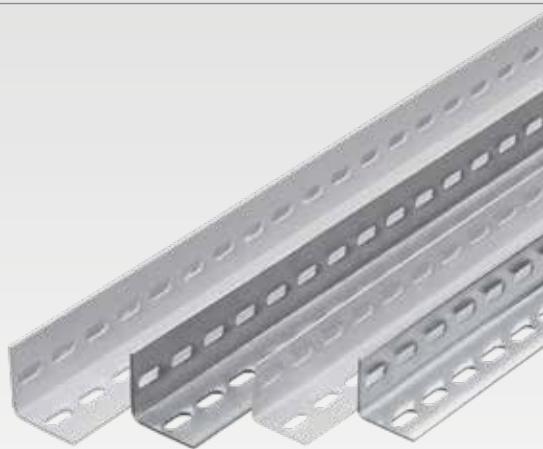

Optimal combination of the 25 mm grid perforations of the **MULTIplus** T-profiles and the 25 mm edge height of the **MULTIplus85** and **MULTIplus150** shelves.

Angle profiles

bolted

» Office shelving

Lots of space for organisation

- For up to 192 folders per bay (at a height of 2,300 mm)
- Optimal use of space thanks to the height adjustability of the shelves in increments of 25 mm
- Single-sided and double-sided use
- Option of plug-in or bolted system
- Shelving with **MULTIplus85** or **MULTIplus150** shelves
- for an attractive appearance: Plug-in system office shelving with non-perforated frame fronts and shelves

TIP In the office shelving sector, both shelves have an edge height of 25 mm and with increments of 25 for the T-profile, offer an ideal height adjustment system to your archive material.

25 mm

» Two versions of shelves

MULTIplus85

The sturdy one

- **85 kg shelf load:** For use with single-sided use office shelving at a depth of 300 mm
- **25 mm edge height**
- The **central stopper** prevents the files and documents from sliding through

Our bestseller

MULTIplus150

The all-rounder

- **150 kg shelf load:** For use with double-sided use office shelving at a depth of 600 mm
- Unique for the shelf load,
edge height of only 25 mm
- The **central stopper** prevents the files and documents from sliding through

» Stop bars and central stoppers to ensure everything stays in place

With office shelving from SCHULTE Lagertechnik, the falling out or pushing of folders through a **stop bar** or a **central stopper** is prevented.

For 300 mm deep shelves, the stop bar prevents the folders from being pushed through.

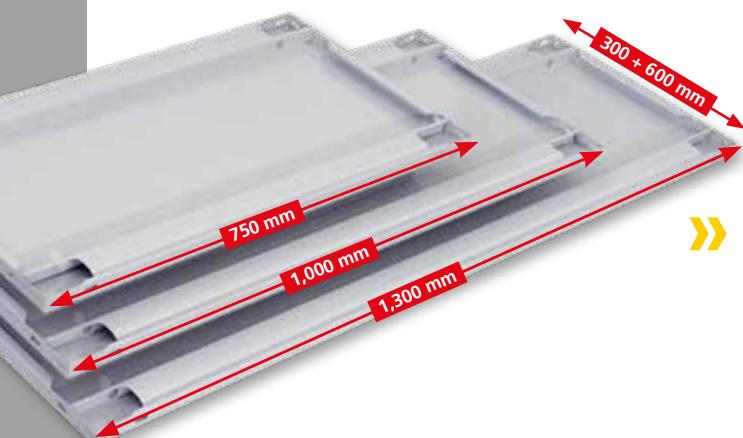

For 600 mm deep shelves, the central stopper prevents the files from being pushed through. All shelves with a depth of 600 mm have a standard **central stopper perforation**.

Stop bar

Central stopper

» Variable widths and depths for optimum adaptation

Shelves for the office shelving are available in four different widths and a wide range of depths. This enables optimal customisation to the existing storage area and the stored items.

» Surfaces in a diverse range

The standard version of all shelves and profiles are supplied as sendzimir galvanised or powder coated in RAL 7035 light grey. The T-profile frames are also available in black.

Surface versions:

sendzimir-galvanised

RAL 7035 light grey

Black
Only T-profile frames

Plug-in system

» Office shelving plug-in system

Modular, flexible, innovative

- Fast and simple installation, flexible retrofitting possible
- If desired with stop bar or central stopper to prevent the files sliding through or falling out
- Modular adaptation of the shelving thanks to comprehensive range of system accessories and compatibility
- Suitable for constructing multi-level shelving systems
- 300 mm shelf depth: up to 96 files per shelf bay at a height of 2,300 mm
600 mm shelf depth: up to 192 files per shelf bay at a height of 2,300 mm

» MULTIplus T-profiles

flexible in height
through 25 mm grid

The perforations in **the MULTIplus T-profiles** in the SCHULTE plug-in system are arranged in a **25 mm grid**. In combination with the **MULTIplus** shelves, which also have an edge height of 25 mm, this results in a unique flexibility of the height adjustability.

The coordination between grid and shelves enables optimal adaptation to the goods to be stored and thus allows the highest possible utilisation of the shelf volume.

» Single-sided use

Bracing with cross brace

Stop bar for 300 mm shelf depth

For 300 mm deep shelves, the **stop bar** prevents the folders from being pushed through.

Benefits:

- More economical bracing variation for single-sided use
- Stop bars (optional accessory) prevent folders or documents from being pushed through
- Optimal adjustability as a result of **MULTIplus85** shelves
- Ideal for installing rows of shelving in front of walls

» Double-sided use

Bracing using face beams

Central stopper for shelf depths of 600 mm

Face beams are simply inserted into the perforation grid of the **MULTIplus** T-profile frames and ensure a high degree of stability.

For 600 mm deep shelves, the **central stopper** prevents the folders from sliding through. The shelves have a standard **central stopper perforation**.

Benefits:

- Bracing variations for double-sided use
- The central stopper (optional accessory) prevents the files and documents from sliding through
- Optimal adjustability as a result of **MULTIplus150** shelves
- Ideal for constructing freestanding rows of shelving

Central stopper

Bolted system

» Office shelving bolted system

robust, versatile, economically priced

- The economically priced system for one-story rows of shelving
- Assembly through bolting in the angle profiles and shelves
- If desired with stop bar or central stopper to prevent the files sliding through or falling out
- 300 mm shelf depth: up to 96 files per shelf bay at a height of 2,300 mm
600 mm shelf depth: up to 192 files per shelf bay at a height of 2,300 mm

» Angle profiles

Height can be varied by increments of 25 mm

The angle profiles are available in two different versions, depending on the intended application. A range of dimensions and material strengths ensure high stability for every shelving unit.

The perforations in **the angle profiles in the SCHULTE bolted system** are arranged in a **25 mm grid**. In combination with the **MULTIplus** shelves there is a unique flexibility of height adjustment.

You save space due to small assembly dimensions for long rows of shelves through slim angle profiles.

» Single-sided use

Bracing through corner angle
Stop bar for 300 mm shelf depth

For 300 mm deep shelves, the **stop bar** prevents the folders from being pushed through.

Benefits:

- More economical bracing variation for single-sided use
- Stop bars (optional accessory) prevent folders or documents from being pushed through
- Optimal together with **MULTIplus85shelves**
- Ideal for installing rows of shelving in front of walls

» Double-sided use

Bracing through corner angle
Central stopper for shelf depths of 600 mm

For 600 mm deep shelves, the **central stopper** prevents the folders from being pushed through. The shelves have a standard **central stopper perforation**.

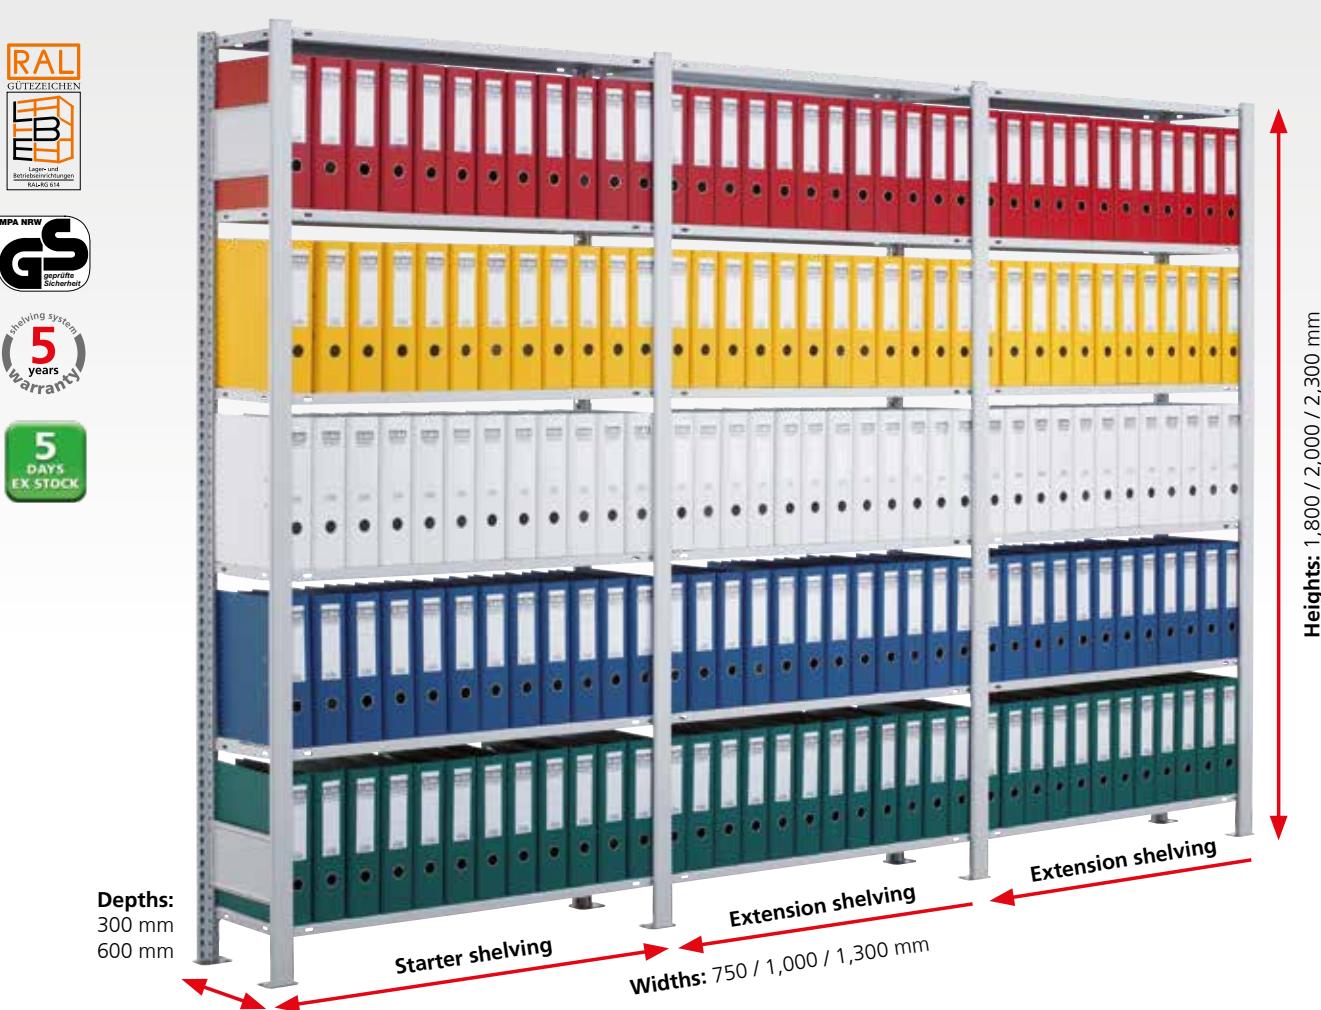

Benefits:

- Bracing variations for double-sided use
- The central stopper (optional accessory) prevents the files and documents from sliding through
- Optimal together with **MULTIplus150** shelves
- Ideal for constructing freestanding rows of shelving

» Office shelving plug-in system

for storing and organisation in the office and archives

Planning

The specified load capacities apply to uniformly distributed loads per shelf. Folder heights (OH) determine the number of storage levels. For complete shelving units, T-profiles and depth ledgers are supplied as standard in **MULTIplus** pluggable. If you require pre-assembled frames, these are riveted at the factory at an extra charge (see page 83).

Safety

Shelving with a height/depthratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A single-sided use office shelf unit with a depth of 300 mm and a height of 1,800 mm must be secured by wall anchoring. An office shelf unit with a depth of 600 mm that can be used on both sides may be set up to a height of 3,000 mm without anti-tilt protection.

Assembly measurements

Starter shelving:
Nominal length + 60 mm

Extension shelving:
Nominal length + 6 mm

Total frame depth:
Nominal depth + 36 mm

Buckling length:
All order proposals are statically designed for a maximum buckling length of 600 mm. Larger buckling lengths are possible on request.

Stop bars

For one-sided office shelving with a depth of 300 mm, a stop bar can be used.

Central stopper

A central stopper can be used for two-sided office shelving with a depth of 600 mm. The shelves have a central stopper perforation as standard.

Non-perforated T-profile frames

To ensure an elegant appearance, all plug-in office shelving systems are supplied with non-perforated frame fronts and shelves.

Product features

Single-sided use

- Reinforcement by cross braces
- Stop bars (optional accessory) prevent folders or documents from being pushed through
- Optimal adjustability as a result of **MULTIplus85** shelves
- 300 mm shelf depth: contains up to 96 files per bay at a height of 2,300 mm
- attractive appearance due to unperforated T-profile fronts and shelves
- Ideal for installing rows of shelving in front of walls

Double-sided use

- Bracing using face beams
- The centre stoppers (optional accessory) prevent the files and documents from sliding through
- Optimal adjustability as a result of **MULTIplus150** shelves
- 600 mm shelf depth: contains up to 192 files per bay at a height of 2,300 mm
- attractive appearance due to unperforated T-profile fronts and shelves
- Ideal for constructing freestanding rows of shelving

The right shelf?

For all office shelving, the shelves have already been adapted to suit the load.

For double-sided use office shelving with a depth of 600 mm a **MULTIplus150** shelf is used.

MULTIplus85 shelves are used for one-sided office shelving with a depth of 300 mm.

Office shelving bolted system

for storing and organisation in the office and archives

Planning

The specified load capacities apply to evenly distributed loads per shelf. Folder heights (OH) indicate the number of storage levels.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A single-sided use office shelf unit with a depth of 300 mm and a height of 1,800 mm must be secured by wall anchoring.

An office shelf unit with a depth of 600 mm that can be used on both sides may be set up to a height of 3,000 mm without anti-tilt protection.

Assembly measurements

Starter shelving:
Nominal length + 6 mm

Extension shelving:
Nominal length + 3 mm

Total frame depth:
Nominal depth + 6 mm

Buckling length:
The first shelf must be inserted at a height of 100 mm. The free buckling length must not exceed 500 mm. Larger buckling lengths are possible on request.

Stop bars

For one-sided office shelving with a depth of 300 mm, a stop bar can be used.

Central stopper

A central stopper can be used for two-sided office shelving with a depth of 600 mm. The shelves have a central stopper perforation as standard.

Bracing through corner angle

The bracing of the shelves with corner angles is optimal for use on both sides.

Product features

Single-sided use

- Stop bars (optional accessory) prevent folders or documents from being pushed through
- Optimal adjustability as a result of **MULTIPLUS85** shelves
- 300 mm shelf depth: contains up to 96 files per bay at a height of 2,300 mm
- Ideal for installing rows of shelving in front of walls
- Bracing through corner angle

Double-sided use

- The central stopper (optional accessory) prevents the files and documents from sliding through
- Optimal adjustability as a result of **MULTIplus150** shelves
- 600 mm shelf depth: contains up to 192 files per bay at a height of 2,300 mm
- Ideal for constructing freestanding rows of shelving
- Bracing through corner angle

Bracing using face beams, cross braces or corner angles

Please refer to the assembly instructions for the number of levels to be braced. Office shelving as bolted systems are braced using corner angles. Office shelving units as a plug-in system are used for one-sided use with a cross brace, stiffened by face beams for use on both sides.

Hint: The bay load specifications only apply to starter shelving. For the combination of starter shelving with extension shelving, the bay loads of the starter shelving are reduced by 50 %!

Suspension file shelving unit, bolted system

Single-sided use

Properties

- Suitable for the most popular filing systems (Elba / Leitz or Zippel)
- Suspension rod load capacity of up to 45 kg
- Bracing through corner angles
- Angle profiles and shelves in RAL 7035 light grey, suspension rod galvanised

Benefits

- Space saving and organised storage of folders and files

Threaded rod, bolted shelving

Double-sided use

Properties

- Threaded rod load capacity of 70 kg applies to uniformly distributed loads
- Bracing through corner angles
- Angle profiles and shelves in galvanised or RAL 7035 light grey, threading rods galvanised

Benefits

- Organisation through 3 bays per shelf, with 4 threaded rods pre shelf
- No falling out at the side through boundary with angle profiles

Shelves with doors must always be secured against tipping (see page 157)!

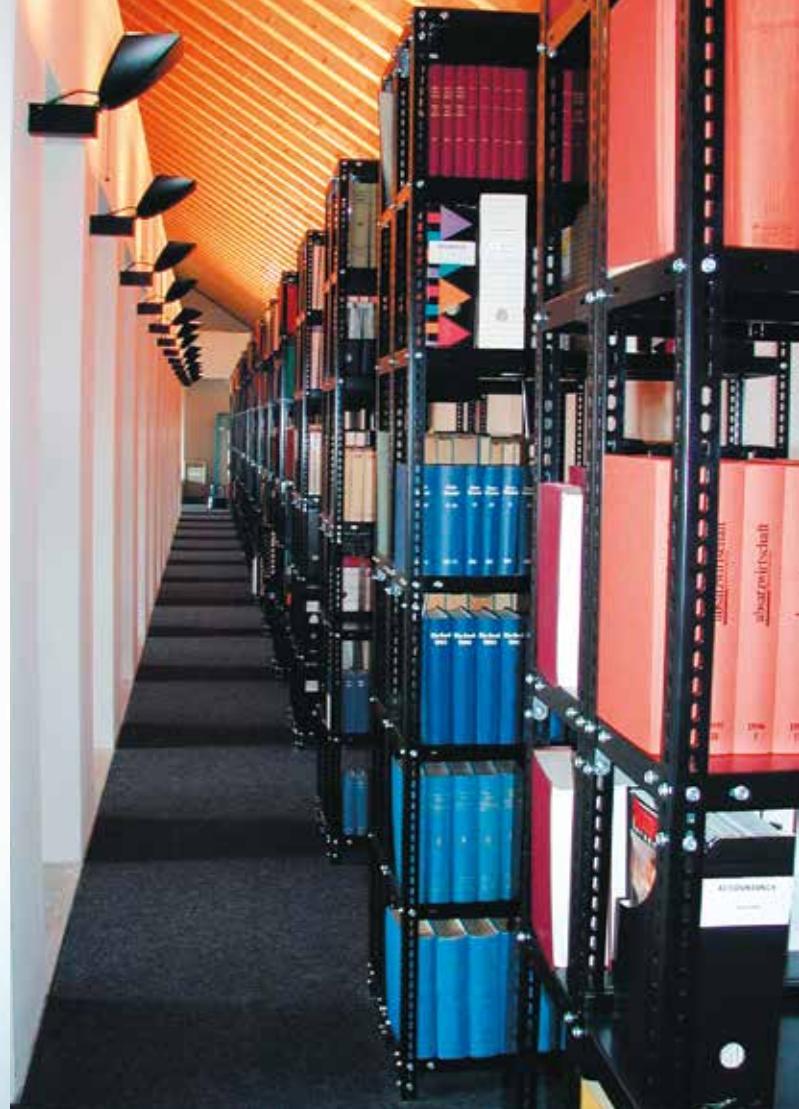

Store important documents safely!

Hinged doors can be installed in front of plug-in system shelving units 1,000 mm wide and in combination with side and rear walls make lockable office cabinets.

The hinged doors visually enhance your office furnishings and help you to keep confidential documents locked up.

» Study and archive in a **classic** and modern **ambience**

At EBS Business School, a private higher education institution in the German town of Oestrich-Winkel, around 1200 students are working towards their degrees in business studies. And from both an academic and architectural perspective, these scholars in the Rheingau region are really offered something special. The historic campus is spread across a castle, a fortress and a palace.

The redesign of the library was therefore a particular challenge: A functional shelving system should not only accommodate the more than 35,000 media, but also reflect the architectural character of the Bauhaus Palais. A perfect task for SCHULTE Lagertechnik. In order to incorporate the shelving into the room concept

with a sloping ceiling, SCHULTE Lagertechnik installed single and double racks containing over 2,000 shelves using the bolted system.

Thanks to two tricks, a visual highlight was achieved: The shelves are plastic powder-coated in black, whereby galvanised hexagonal bolts deliberately stand out visually and give the shelves a "Bauhaus style". With this, in a classic modern ambience all requirements for the storage of monographs, doctoral theses, manuals, scripts or working papers are met. The shelves have stop bars or central stoppers to hold the books in position. In addition, a custom bookend design makes it easier to handle the literature.

At a glance

Requirements

- » Archiving the books from the library collection in a way appropriate to the Bauhaus style of the building

Scope of work

- » Consulting, planning, delivery and assembly

Object data

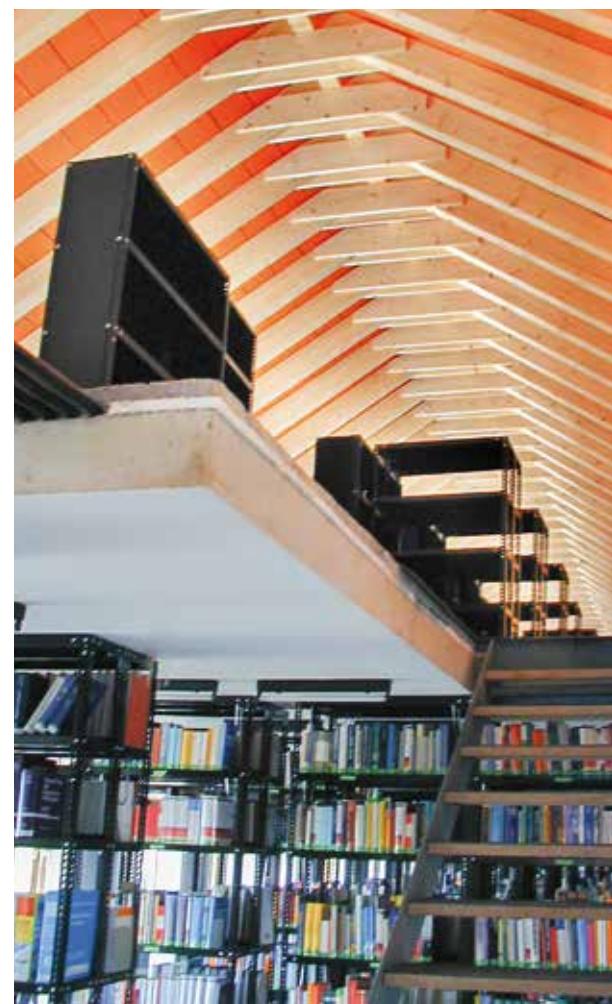

- » Single and double rack rows with stop bars, central stoppers and book brackets
- » approx. 2,000 BASIC70 and MULTIplus150 shelves

Special features

- » Adaptation of the shelves to the specified architectural style in the special colour black in combination with galvanised hexagonal bolts. Shelf dimensions were already taken into account during the planning stage, in order to fit them into free-standing components.

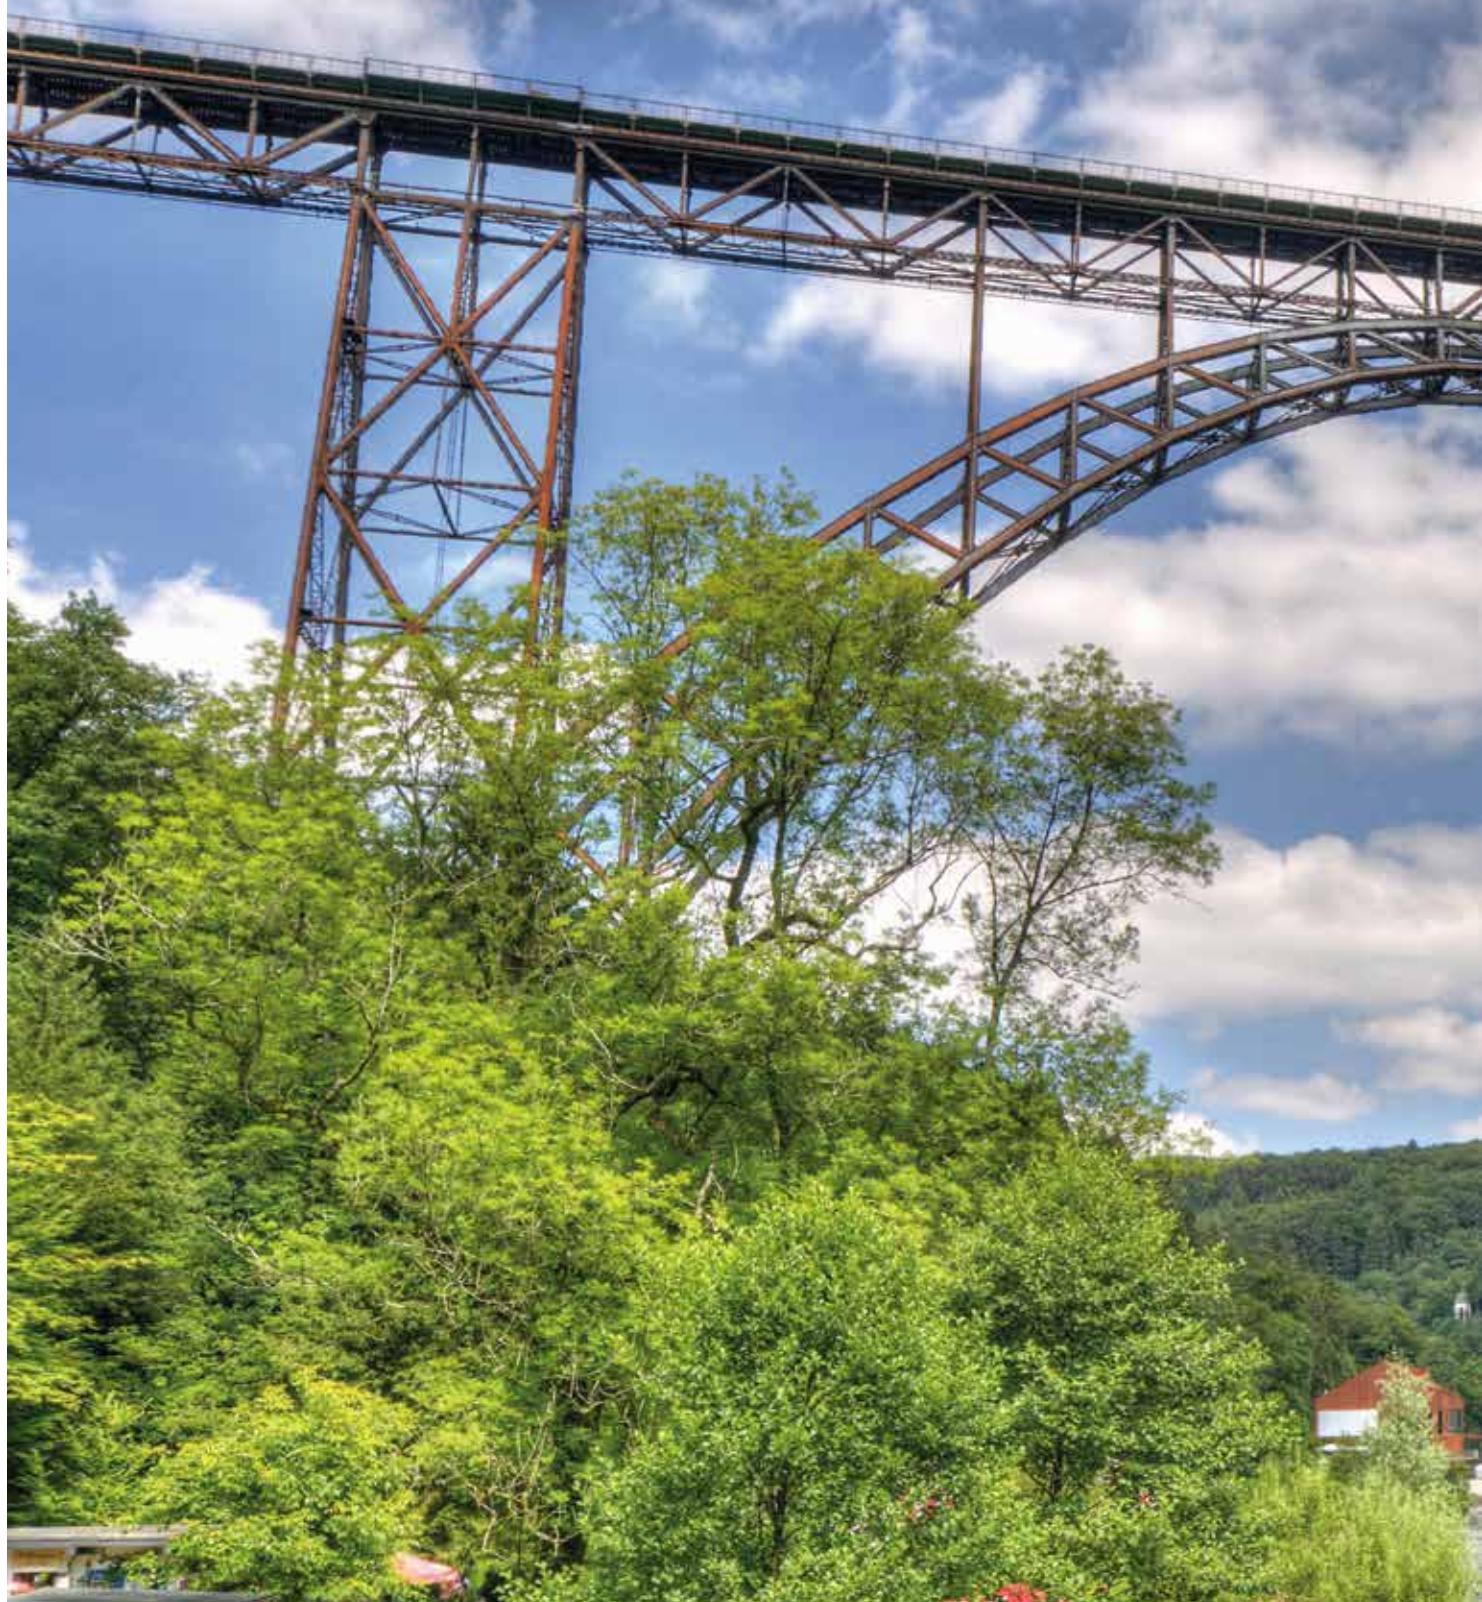

Benefits

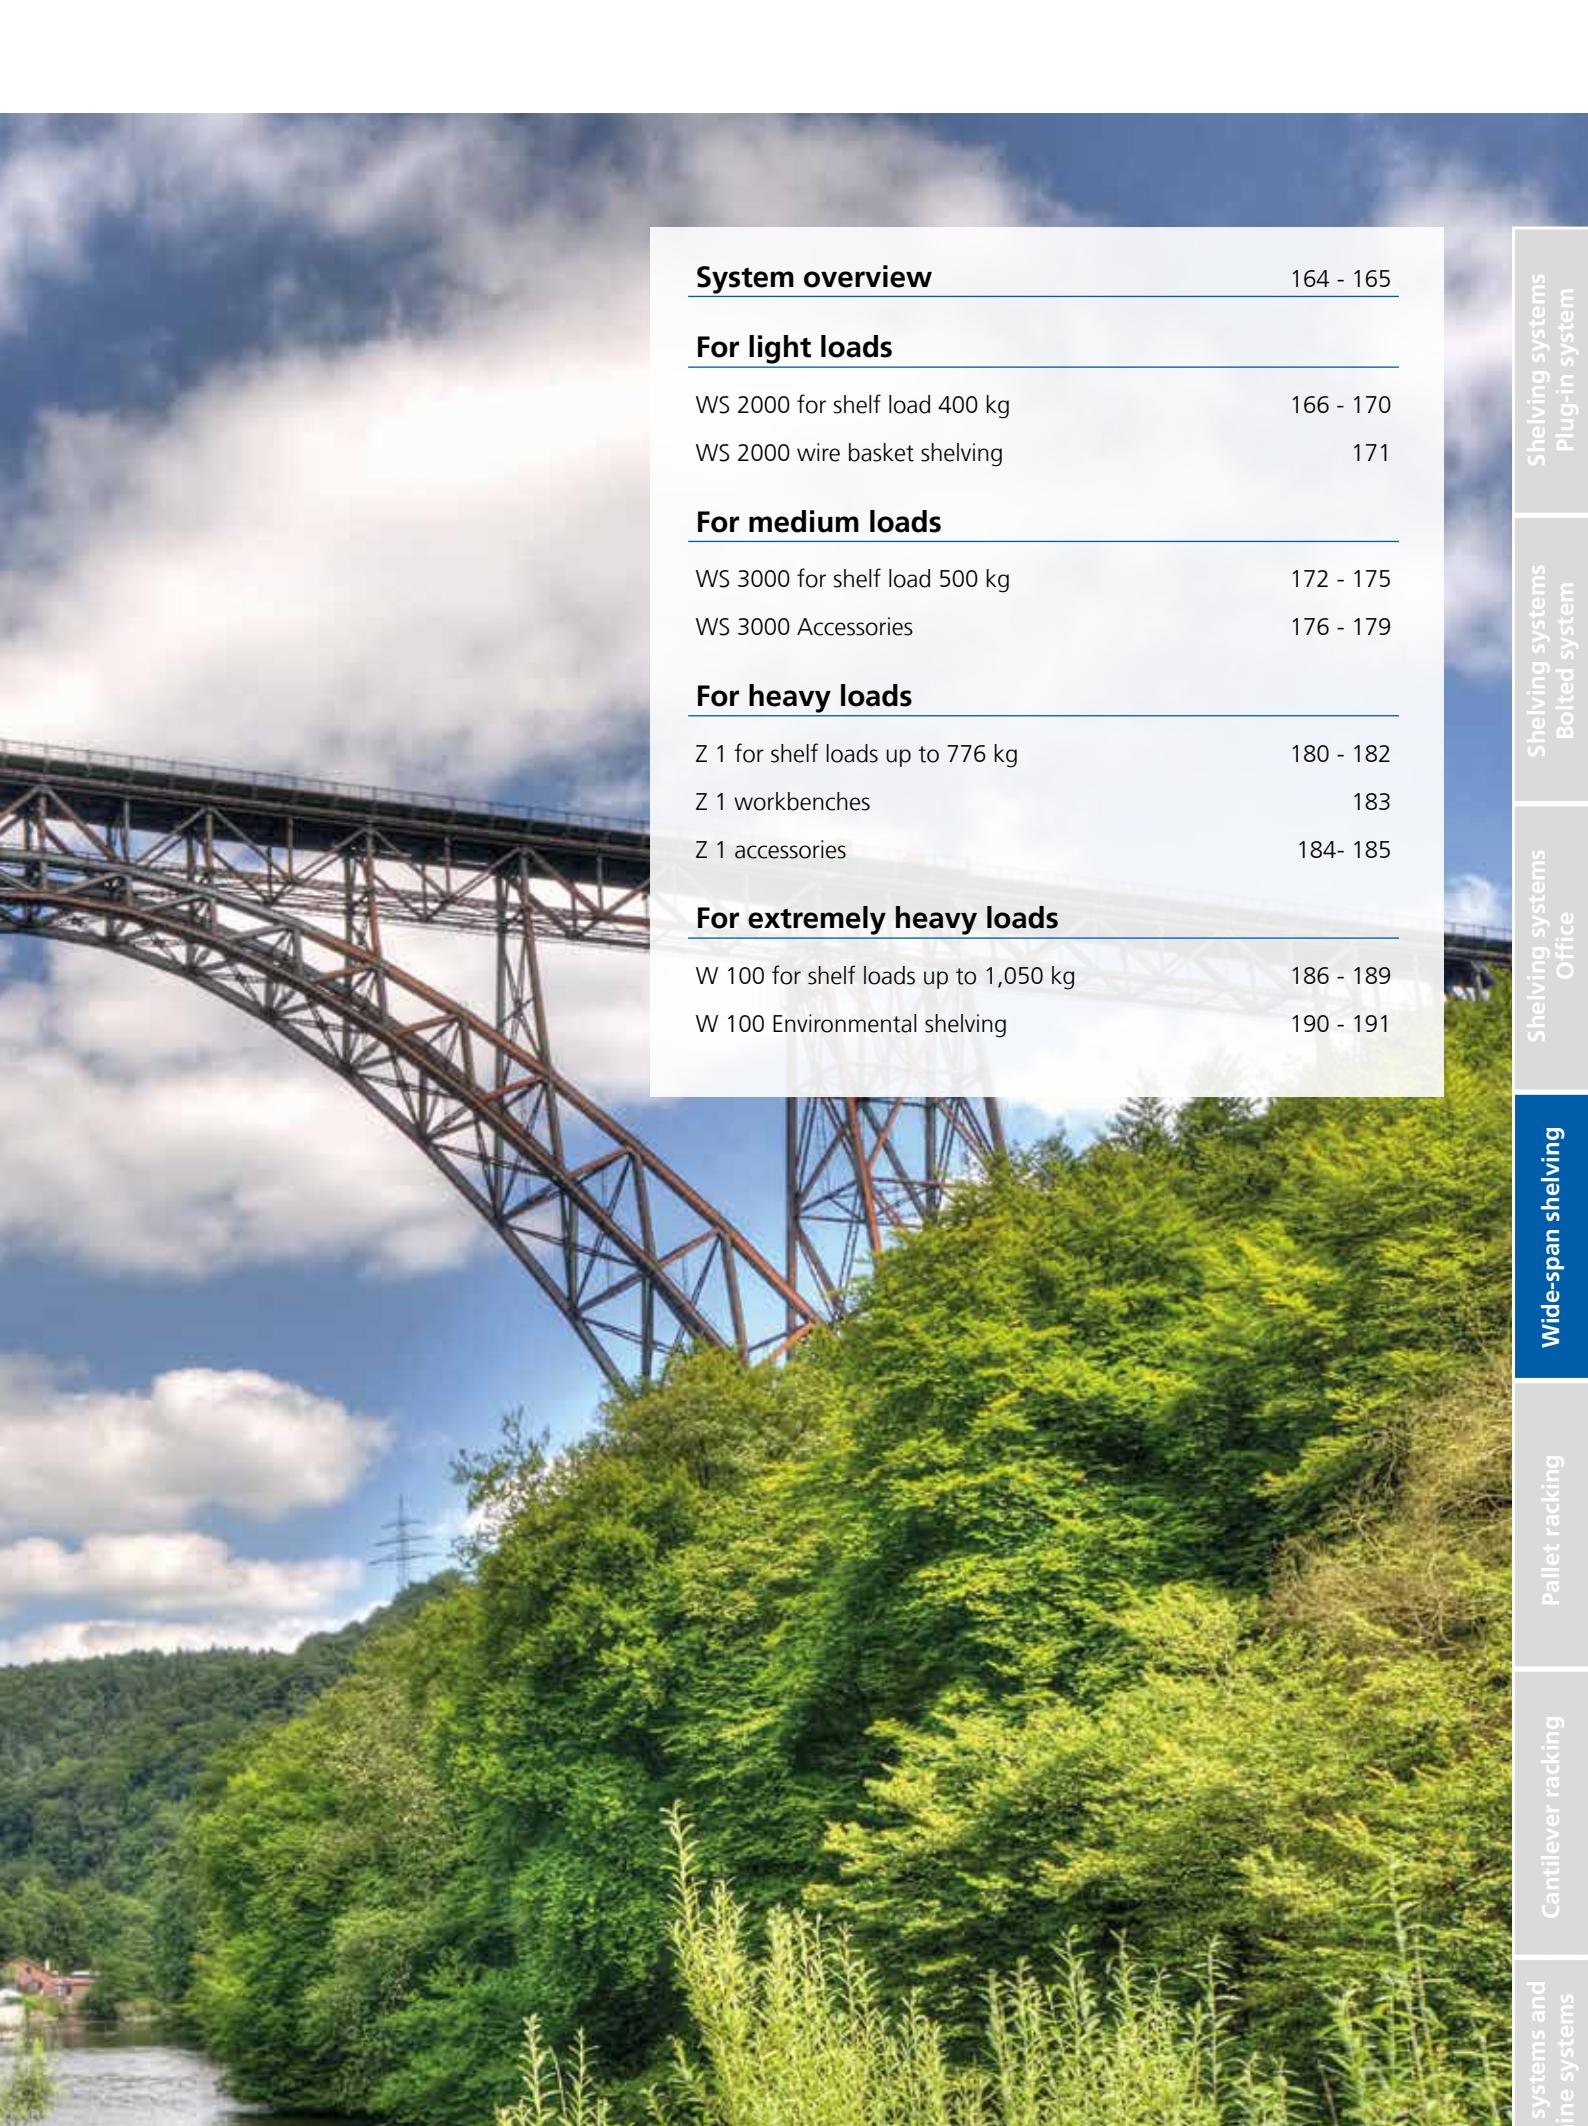

- » Optimal storage capacity with simultaneous harmonious integration of the shelves into the architecture of the building

» Wide-span shelving

– Bridging large requirements

WIDE-SPAN SHELVING

» **4 systems** for every application

WS 2000

Shelf load 400 kg

Can be combined
with Shelving units
Plug-in system

- Maximum **shelf load 400 kg**
- Maximum **bay width 2,500 mm**
- With **MULTIplus** T-profile frames
- Can be combined with the plug-in system by SCHULTE Lagertechnik

WS 3000

Shelf load 500 kg

- Maximum **shelf load 500 kg**
- Maximum **bay width 2,500 mm**
- With multifunctional columns

For light loads

WS 2000

WS 2000 wide-span shelving is designed for long loads and to span large widths. Construction heights of up to 7.5 metres can be achieved.

Its compatibility with the plug-in system and the available accessories makes the WS 2000 an ingenious shelving system for a range of applications.

For medium loads

WS 3000

The WS 3000 wide-span shelving system has frames made of multi-functional uprights that allow construction heights of up to 12 metres.

The special beams and partitioning options of the WS 3000 offer lots of space for the most varied of loads.

Z1

Shelf loads up to 776 kg

- Maximum **shelf load 776 kg**
- Maximum **bay width 2,450 mm**
- Quick and fully pluggable assembly using angle profiles with keyhole slots

W 100

Shelf loads up to 1,050 kg

- Maximum **Shelf load 1,050 kg**
- Maximum **bay width 2,500 mm**
- Extremely high load capacity through robust truss framework

For heavy loads

Z1

Z1 wide-span shelving has a load capacity of up to 776 kg per level and is particularly well suited for storing medium-heavy stored loads.

The simple plug-in construction offers fast and easy assembly.

For highest loads

W 100

W 100 is the most stable wide-span shelving we offer. Only pallet racking has a higher load capacity. If you want to store heavy goods conveniently you can't go past the W 100.

Two different beam types are available depending on the required shelf load.

» WS 2000 wide-span shelving

Shelf load 400 kg · Bracing through beams

Planning

Wide-span shelving may only be loaded manually.
Compatible with the plug-in shelving system.
Due to transport reasons, the frames are delivered disassembled.
For complete shelving units, T-profiles and depth ledgers are supplied as standard in version **MULTIplus** pluggable.

Safety

Shelving with a height/depthratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 400 mm and a height of 2,500 mm must be secured by wall, foot or head bracing (see fixing accessories, pages 85 - 89).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:
Nominal length + 60 mm

Extension shelving:
Nominal length + 6 mm

Total frame depth:
Nominal depth + 36 mm

Height of the beams: 65 mm

Buckling length:
The free buckling length must not exceed 600 mm.

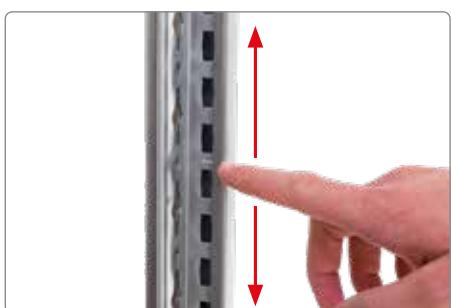

Bracing through beams

Bracing of the shelving is carried out using special beams to bridge wide distances.

Shelving with wire mesh baskets

Special fine-mesh wire baskets allow a wide range of different small-part products on one level to be stored.

25 mm perforation grid

Thanks to the small grid perforation of only 25 mm, it is possible to almost infinitely adjust the levels.

Product features

- maximum shelf load 400 kg
- Large storage volume in a small space
- Easy to store bulky and voluminous items
- Savings in time thanks to short picking sequences as a result of double-sided use
- Easy to erect by simply plugging in the beams
- Storage either on steel shelf levels, 19 mm chipboard or in wire baskets
- The height of the levels can be adjusted in increments of 25 mm
- individual adaptation to spatial conditions and to the stored goods through 4 shelf widths

WS 2000 wire basket shelving

with wire baskets and shelves

Single-sided use

Properties

- 6 levels with wire baskets and 5 compartment dividers each with mesh size: 10 mm
height at the front: 120 mm
height at the rear: 170 mm
shelf load per basket level up to 210 kg
- 1 to 3 shelf levels with **MULTIplus250** steel shelves
shelf load per shelf 400 kg
- Individual height adjustment of the levels
in increments of 25 mm
- Mesh basket levels are supplied segmented (division as for steel shelves and chipboards, see page 168/169)
- Frames and beams galvanised
wire baskets gloss galvanised

Benefits

- For organised storage of loose small parts
- Ideal for warehouses and salesrooms

Height:
2,000 mm
2,500 mm
3,000 mm

Widths: 1,500 / 2,000 / 2,250 / 2,500 mm

**Planning**

Wide-span shelving may only be loaded manually.
The specified load capacities apply to evenly distributed loads per shelf.
Due to transport reasons, the frames are delivered disassembled.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 400 mm and a height of 2,500 mm must be secured by wall, foot or head bracing (see fixing accessories, page 176).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:
Nominal length + 84 mm

Extension shelving:
Nominal length + 42 mm

Total frame depth:
Nominal depth

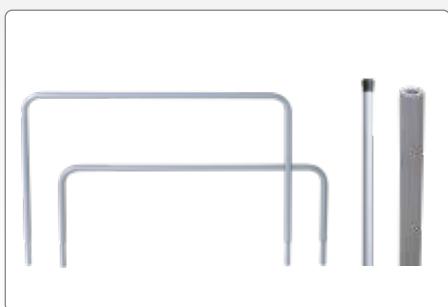

Height of the beams: 70 mm

Buckling length:
All order proposals are statically designed for a maximum buckling length of 600 mm.

Bracing through beams

Bracing of the shelving is carried out using perforated beams to bridge large distances.

Highly flexible thanks to various division options

The system perforation of the beams makes various division options a possibility.

Multifunction frames

The multifunction frames have perforations at 25 mm increments, meaning the levels can be adjusted almost infinitely.

Product features

- With multifunction frames MF-40
- Maximum shelf load 500 kg
- Optimal storage on steel panels or 19 mm chipboards
- Height of levels can be adjusted in increments of 25 mm
- Lateral beams with perforations every 200 mm
- Individual adaptation to spatial conditions and to the stored items with three shelf widths
- Flexible partitioning
- Large storage volume in a small space
- Time saved thanks to short picking sequences as a result of double-sided use
- Easy to adapt to the items being stored by simply plugging in the beams

Quick finder

Complete shelves	174 - 175
System components & individual parts	176 - 179

Aim high with multifunction frames

The new SCHULTE multifunctional frame provides even greater flexibility for optimum use of space.

As wide-span shelving, the multifunction frames have been designed for a broad range of applications. Multifunctional uprights allow construction heights up to 12 m and bay loads up to 10 tons.

Wide-span shelving

Pallet racking

Cantilever racking

Shelving systems and
mezzanine systems

Planning

Wide-span shelving may only be loaded manually.

The specified load capacities apply to evenly distributed loads per shelf.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 400 mm and a height of 2,500 mm must be secured by wall, foot or head bracing (see fixing accessories, page 184).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Starter shelving:

Nominal dimension = Outer dimension

Total frame depth:

Nominal dimension = Outer dimension

Height of the supports and crossbars:

for bay width 1,536 mm = 72 mm

for bay width 1,841 mm = 79 mm

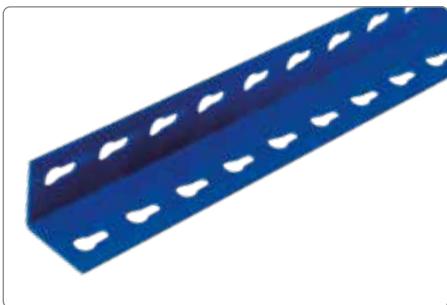

Bracing with supports and crossbars

Bracing of the shelving is carried out using supports and crossbars to bridge large distances.

Steel panels or chipboards

Depending on the application and the required shelf load steel panels or chipboards can be used for all Z1 shelving.

Angle profile with keyhole slots

48 x 48 mm

Product features

- Maximum shelf load 776 kg
- Optimal storage on steel panels or 16 mm chipboards
- Height of levels can be adjusted in increments of 38 mm
- Optimal adjustable according to the spatial conditions and the items with 4 shelving widths and 3 shelving heights
- Easy to store bulky and voluminous items
- Time saved thanks to short picking sequences as a result of double-sided use
- Quick and fully pluggable assembly without bolts using keyhole slots in the profiles

Z1 packing table

with shelving levels

Properties

- Shelf load for table level 320 kg
- Shelf load for shelving level 100 kg
- Individual height adjustment of the levels in increments of 38 mm
- Decked with 16 mm chipboards
- Uprights blue, crossbars orange

Benefits

- Optimal storage of the required tools and materials in the shelving levels
- Individual use for workshop and warehouses, for example for packing and picking
- Quick and fully pluggable assembly without bolts using keyhole slots in the profiles

» W 100 wide-span shelving

Shelf load up to 1,050 kg · Bracing through beams

Uprights
blue

beams
orange

Frame-
work
galvanised

Planning

Wide-span shelving may only be loaded manually.

The specified load capacities apply to evenly distributed loads per shelf.

Due to transport reasons, the frames are delivered disassembled.

Safety

Shelving with a height/depth ratio greater than 5:1 must be secured against tipping in accordance with the DGUV (German statutory accident insurance association) regulation 108-007 (BGR 234).

Example:

A shelf unit with a depth of 600 mm and a height of 3,500 mm must be secured by wall, foot or head bracing (see fixing accessories, page 189).

The specified load capacities apply to evenly distributed loads per shelf.

Assembly measurements

Total length of the shelf:

Number of upright frames x 50 mm + nominal length + 7 mm

Total depth of the shelf:

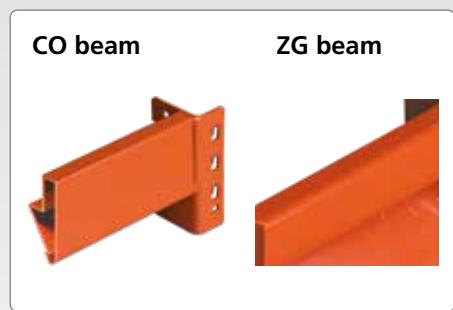

Nominal depth + 2 mm

Height of the beams:

Type ZG 55: 80 mm

Type ZG 85: 110 mm

Type CO: 65 mm

Bracing through beams

The bracing of the shelves is carried out according to Load with CO beam or ZG beam.

The specially profiled ZG beam is optimal for heavy loads.

Steel panels or chipboards

Depending on the intended use, the following can be selected Steel panels or chipboards can be used.

Standard frames

The frames consist of supports and framework bracing and are therefore optimally suited for heavy loads.

Product features

- maximum shelf load 1,050 kg
- Maximum bay load 3.8 t
- Storage of the goods optionally on steel panels or 25 mm chipboards
- Different types of beams according to the required shelf load
- Optimal height adjustment of the storage room in increments of 25 mm
- Optimal adjustable according to the spatial conditions and the items with 3 shelving widths and 3 shelving heights
- Easy to store bulky and voluminous items
- Easy to adapt to the items being stored by simply plugging in the beams
- Loading and unloading of the stock items possible from both sides

Only load and unload wide-span shelving by hand!

In spite of the high load capacity and the similarity to pallet racking wide-span shelving must only be loaded and unloaded by hand and not with a forklift.

W 100 Environmental shelving set for storage of water-polluting substances

Properties

- Load capacity of the storage level 538 kg with uniformly distributed loads
- particularly stable due to framework bracing in the frame
- stable CO-beams for holding wire mesh shelves
- individual height division of the storage space by 25 mm grid
- Incl. containment tray
- Uprights blue, beams orange, framework galvanised

Benefits

- direct discharge of escaping liquids through wire mesh shelves in the tightly welded drum pallet
- Easy transport of the drum pallet with forklift or pallet jack
- Easy to adapt to the items being stored by simply plugging in the beams
- double-sided loading and unloading of the stored goods

Set comprising:

Starter shelving with 2 frames 2,000 x 600 mm (or extension bay unit with only 1 frame)

each 3 levels 1,250 mm with CO-beams and wire mesh shelves

respectively 1 containment tray 1,200 x 800 x 360 mm with 215 l volume incl. wire mesh

CO beams

- for environmental shelving
- Plastic coated, orange

Drum pellets

for storing drums

Properties

- for storing 200 l drums
- 2 drums: W 1,200 x D 800 x H 360 mm
Collection volume: 215 l
- 4 drums: W 1,330 x D 1,200 x H 260 mm
collection volume: 200 l
- Measurements incl. 100 mm under clearance
- Galvanised grating decking inserts

Benefits

- direct discharge of escaping liquids through wire mesh shelves in the tightly welded drum pallet
- easy transport of the drum pallet with forklift or pallet truck

» Individual solutions for sophisticated storage

"Our credo is: Perfect products are created from the interplay of outstanding function, high material quality and good design" according to the words of company founder Johannes Dallmer. Via the three-stage distribution channel, Dallmer exclusively supplies specialist wholesalers from whom the regional craft businesses can then purchase the products. Wholesalers can no longer stock the ever-expanding product portfolio, so that manufacturers such as Dallmer also offer the availability of small quantities in their own warehouses.

Today's logistics must ensure that both palletized goods and small quantities can be stored and picked efficiently. Strong company growth, combined with the market demands for faster response times and deliveries, prompted the company to expand in terms of space, and so it purchased a site of around 20,000^{m²}.

SCHULTE Lagertechnik was commissioned with the planning up to the installation of the new warehouse. Their competence and professionalism were already highly appreciated in the past - during the planning of the existing warehouses - so that this choice was quickly made. With 2,000 additional pallet spaces, the storage area was expanded by approx. 4,500 m².

The products are mainly stored on single-use and Euro pallets and picked directly on site. For individual picking of the container units, these are moved to the lower shelf levels with wire mesh shelves. Thus, bulk and individual orders can be efficiently picked.

The warehouse staff can be guided to optimise the routes of hand scanners and a warehouse management software. To this

end, picking algorithms were analysed and adapted in advance. In addition, the racking system is designed in such a way that open intermediate zones are taken into account to shorten the walking distance as well as a coordinated walking distance width for picking in the opposite direction.

When planning the new warehouse Dallmer also attached particular importance to occupational safety. For safety reasons, the top three levels of the racking system are equipped with guide frames to both additionally stabilise the pallets in the top rows and prevent the stored goods from falling down. In addition, the entire shelving system is equipped with a sprinkler system, which is mounted shockproof within the shelf level at beam height.

At a glance

Requirements

- » Storage of single use and Euro pallets
- » Storage of small parts
- » Faster picking
- » Fast processing of orders

Scope of work

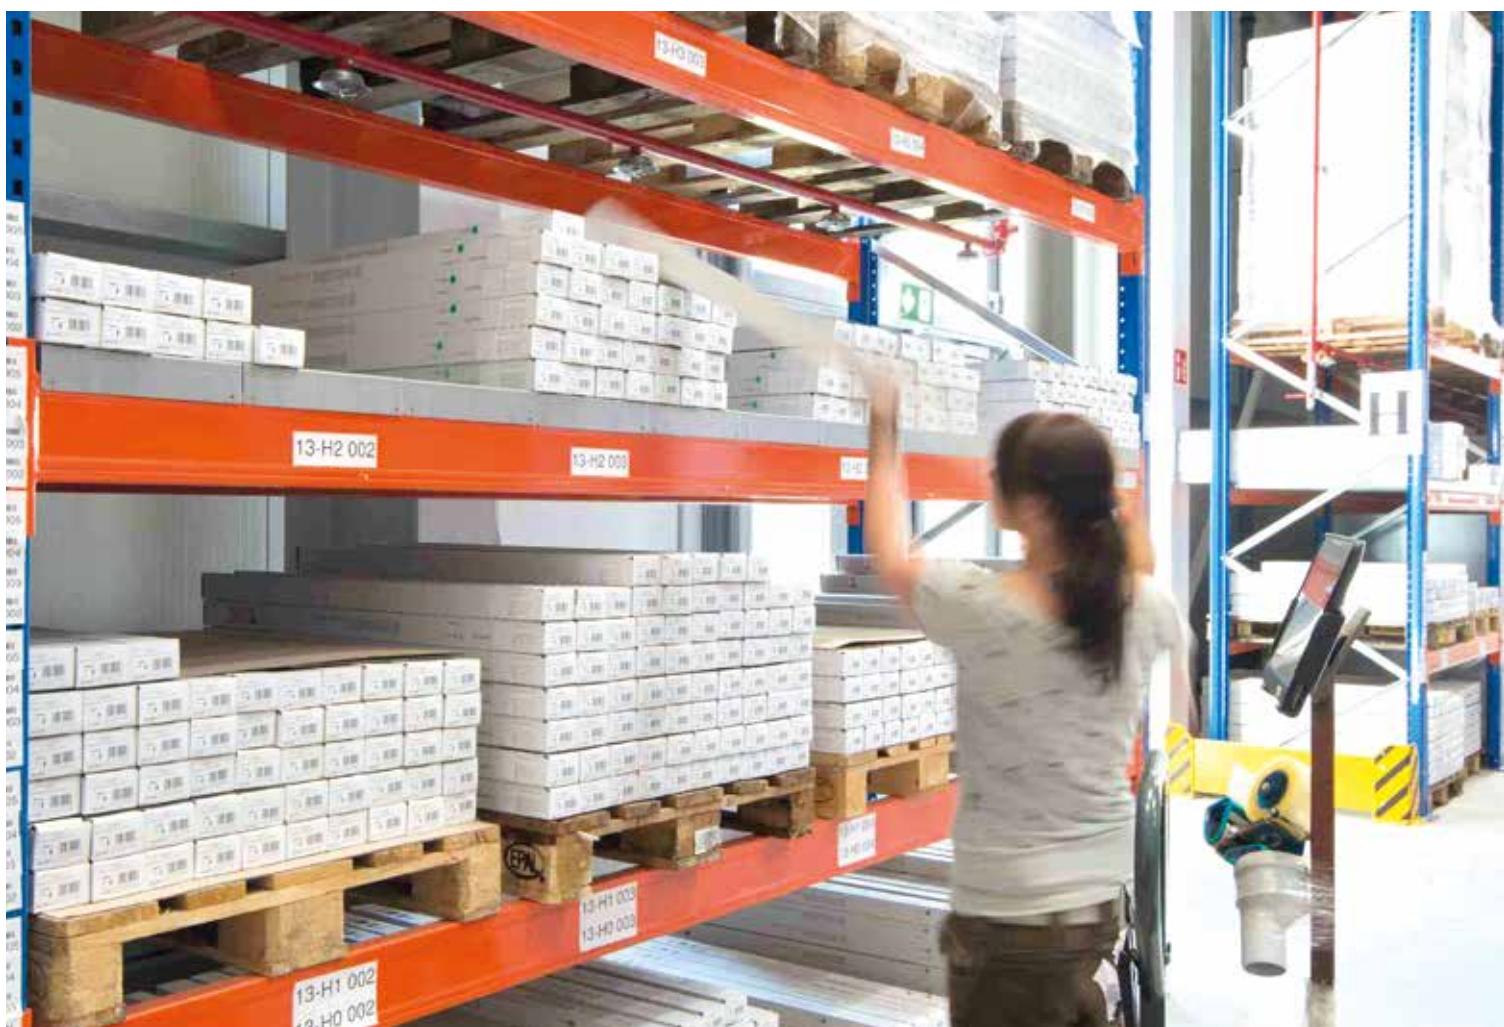

- » Consulting, planning, delivery and assembly

Special features

- » Storage of pallets, bulky goods and small parts in a flexible racking system
- » Planning in an existing property

Benefits

- » Increase of the storage capacity from 2,000 to 4,000 parking spaces
- » Optimised walking routes
- » More efficient picking
- » Improved occupational safety
- » Fastest order picking and storage through wide aisle storage

» Pallet racking

Planning

Necessary planning factors:

- The pallet weight
- The dimensions of the storage goods and the height of the pallets
- The length of the beams (1 to 4 pallets per bay)
- Number of storage levels per bay
- The frame height (clearance room)
- The type of operating devices

Safety

- Pallet racks must always be secured against moving. Suitable ground anchors must be used for this, which are included in delivery (page 206).
- To protect the shelves and safe operation by industrial trucks, we recommend the use of impact protection corners and crash barriers (page 207) according to DUGV 108-007 (BGR 234).

Assembly measurements

Total length of the racks:

- For upright frames S610-M18 : sum of all shelf widths + (number of frames x 86 mm)
- For upright frames S625-A18 + S635-B20 + S645-B25: Sum of all shelf widths + (number of frames x 110 mm)
- allow at least 100 mm distance between the outer frames and walls or parts of the building for base plates

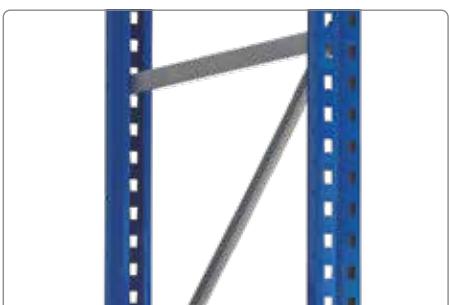

Beams with box profile

Cold-formed profiles with welded-on clasps ensure particularly high stability as well as longitudinal and torsional rigidity.

Versatile decking options

An extremely broad range of items can be stored by using different decking such as steel panels, chipboard, grating, container and drum decking.

Select from 4 types of frames

Depending on the load requirements, you can select from 4 different types of frames.

Product features

- high shelf loads up to 4,450 kg and bay loads up to 24.5 t are standard
- One-piece frame profile up to 12 m high
- The height of the beams can be adjusted in increments of 50 mm
- Static calculation in accordance with DIN EN 15512:2020
- Loading and unloading with stacker cranes and industrial trucks
- Particularly stable with framework strutting in the frames
- High length and joint rigidity through cold-formed box profiles with welded brackets
- Intermediate heights of the frames and intermediate lengths of the beams
- Long-term planning planning security thanks to standard frames
- Easy to erect by simply hanging in the beams
- Optimal storage of flat pallets, lattice boxes or other loading devices thanks to system accessories

PALLET RACKING

» New version of DIN EN 15512:2020

for an increased level of safety in the warehouse

Background and changes

DIN EN 15512 is considered one of the most important regulations for the static design of fixed, adjustable pallet racking made of steel. After its introduction in 2009, it has now been revised and republished in the 2020 version.

The changes were made due to a progressive European harmonisation of standards and regulations as well as a continuous further development and revision of the contents according to the latest scientific findings. This entails various adjustments to the basic principles and calculation methods.

The superficially changed loads for columns and spars are the result of a complex interplay of diverse static influencing variables and evaluations, which together ultimately lead to a significantly higher level of safety for the user.

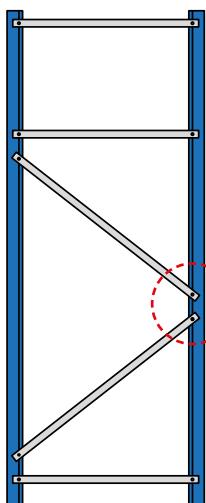

With the publication of DIN EN 15512:2020 and after the expiry of the coexistence phase at the end of 2021, this standard is thus considered state of the art and must be taken into account by all manufacturers, planners and users.

What does this mean for SCHULTE Lagertechnik?

The new load values through the new DIN EN 15512:2020 affect the system and its components. The load values of the frames are reduced. In the area of the tie bars, this has led to increases and decreases. Existing systems are not affected by the revision of DIN. They are still considered safe.

» Framework construction – two types

Frame with U-Framework
S610-M18-U
76 mm column width

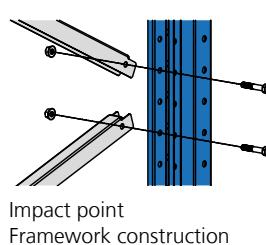

NEW

Optimised frame profile

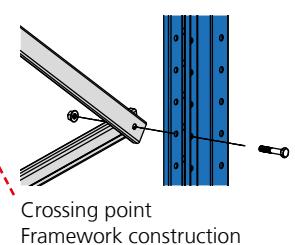

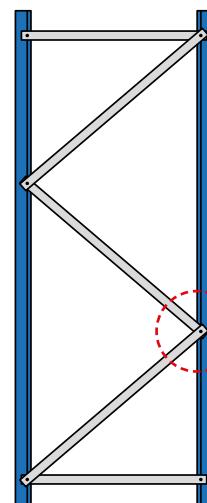

For safe storage and maximum utilisation we have optimised our frame type S610-M18 and changed the type designation to **S610-M18-U**. The frame is of course still compatible with the existing frame type.

since 05.2022	Type S610-M18-U
OLD	Type S610-M18

Frame with C-Framework

S625-A18, S635-B20, S645-B25
100 mm column width

» Important planning bases for pallet racks

Planning dimensions according to DIN EN 15620

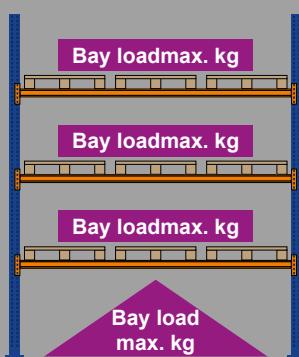

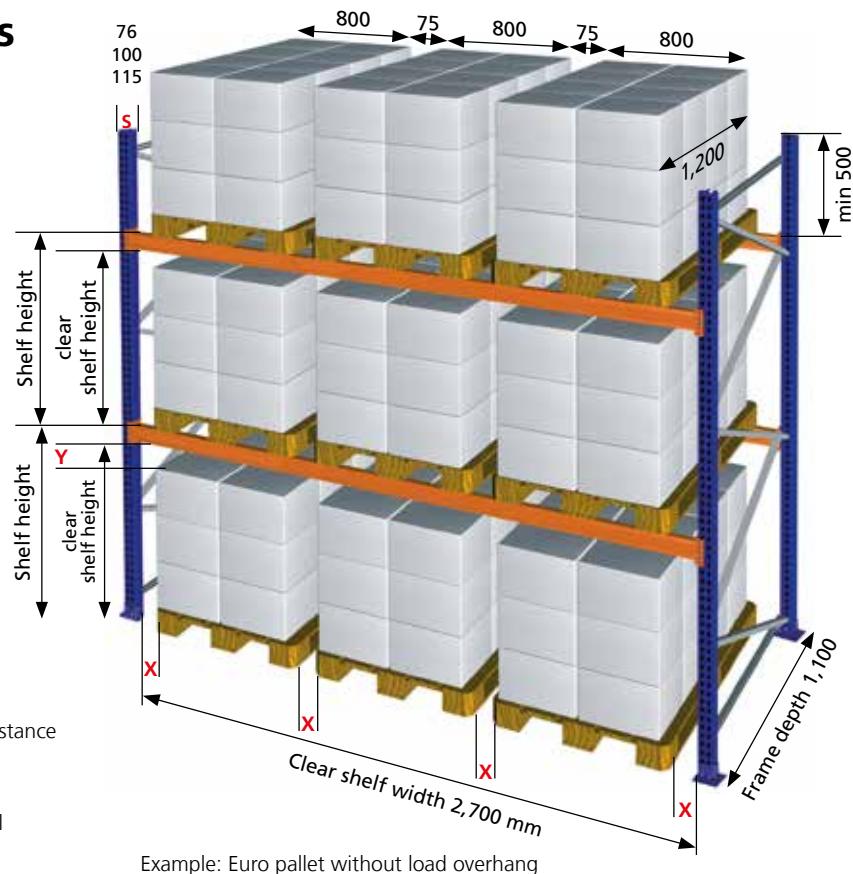

Determine the frame type "S" using the load table for frame types on page 203.

top beam level mm	Distance X min. mm	Distance Y min. mm
0-3,000	75	75
3,001-6,000	75	100
6,001-9,000	75	125
9,001 - 12,000	100	150

* The top edge of the beam apply.

The top level is decisive for the horizontal distance dimensions (X).

The vertical distance dimension (Y) must be determined separately for each bearing level depending on the height.

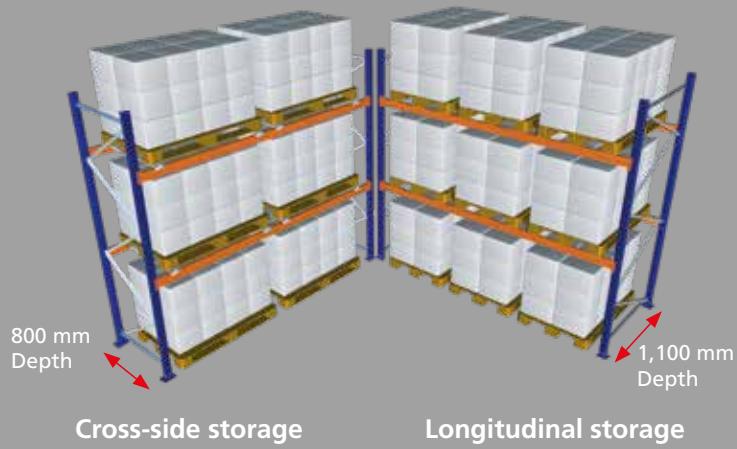

The right choice of frames and beams

For the right pallet rack you have to calculate the weight of your stored goods per level (shelf load). You select the suitable frame based on the total shelf loads (bay load) and the desired shelf height. You will find the right beams for the desired load capacities on page 205, enabling you to put together a pallet rack that is optimally adapted to your requirements.

Longitudinal or transverse storage of the pallets

Due to the storage in transverse or longitudinal direction pallet racks fit perfectly every warehouse requirement perfectly.

Hint: For transverse storage, depth supports should be used (page 212).

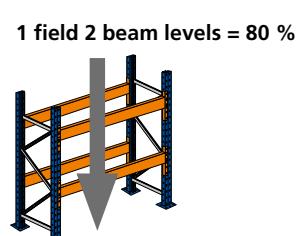

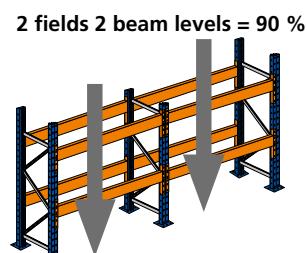

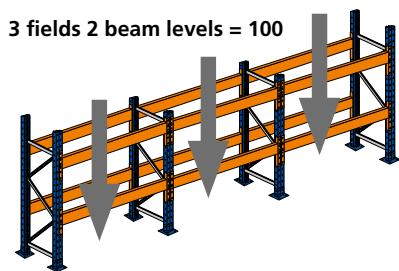

Technical regulations for the construction of a pallet rack

- External uprights must be at least 500 mm higher than the topmost storage level in the case of aisles and traffic routes, to secure aisles against falling stored goods.
- Passages and superstructures must be constructed with a closed level (e.g. gratings, wire mesh decking, chipboards) must be provided.
- The clear passage height must be at least 2,100 mm.
- If the distance between the pallets in the double rack is less than 100 mm, push-through protection must be provided.
- For outdoor uprights and passages, impact protection corners must be installed in accordance with DUGV 108-007 (BGR 234).
- In the case of individual shelving units standing freely in the room, lattice rear walls must be provided at the rear to prevent the stored goods from falling down.
- Concrete quality: at least C 20/25 according to DIN EN 206-1 (DIN 1045-2); concrete thickness at least 200 mm
- Load plates must be attached to each racking system.
- The data only apply to evenly distributed load.
- From 7,500 mm top edge of stored goods, the responsible state building regulations of the individual federal states must be observed by the operator.
- All load specifications apply to indoor installation only. Earthquake loads and wind and snow loads are not taken into consideration and must be requested separately.

Note: Loading values

The load capacity (bay load) is reduced with fewer bays. Please note: the percentage load to the lower load values listed (see drawings above).

The values in the load table are based on 3 shelf bays with at least 2 beam levels each. If fewer bays are set up, the load values are reduced.

Construction type: Racking with one storage level (fixed shelving) and other extension variants on request.

According to new DIN EN 15512:2020

Load capacity table according to types of frames

Bay load specifications only valid for at least 3 shelf bays and 2 beam levels.

Frames

- consisting of: 2 supports, framework consisting of diagonal and horizontal struts, 2 base plates, 4 ground anchors, 2 levelling plates 2 mm
- Up to 12 metres in height
- Height of the beams can be adjusted in increments of 50 mm
- The required load capacity of the rack bay is determined by the type of frame, for this refer to the load capacity table on page 203
- For transport reasons, the frames are delivered disassembled

Separating foil for base plates for surfaces containing magnesium (see page 206)

Please note the technical planning dimensions on page 196 and the load table on page 203.

All load specifications apply to indoor installation only. Earthquake loads as well as wind and snow loads are not considered and must be requested separately.

Beam pairs

- Cold-formed box profiles with welded brackets
- Brackets are fitted with 5 stable hooks for optimal load distribution over the pallet rack uprights
- 2 profile types for optimum price-performance ratio
- 65 mm welding dimension and 50 mm beam depth for all beams
- Shelf loads up to 4,000 kg per pair of beams according to DIN EN 15512:2020
- Incl. Locking pins

* only in combination with frame S645-B25

All beams are only delivered in pairs!

Profile type
LNS-DUO

The profile type LNS-DUO offers load capacities of up to 3,143 kg per pair and is designed for use with medium-heavy storage.

Profile type
EGN-DUO

The profile type EGN-DUO is designed to take maximum loads.

With the SCHULTE 3D Configurator for specialist dealers, you can easily configure your pallet rack with the load values according to the new DIN EN 15512:2020, visualise it in real time and then output it as a finished offer.

Please note the technical planning dimensions on page 196 and the load table on page 203.

All load specifications apply to indoor installation only. Earthquake loads as well as wind and snow loads are not considered and must be requested separately.

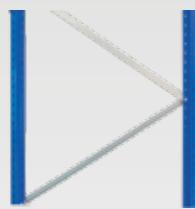

Colour, lengths and load capacities according to your wishes for frames and beams

Have your pallet racking produced in your individual colours. You can get all common RAL tones and also other colours for a one-off, colour surcharge, not based on quantity, from €1,500 per colour (Art.-No. 16040). Delivery times here are 6 weeks. Naturally we can also supply your pallet racking hot-dip galvanised (for a surcharge).

Frames and beams can also be produced in other lengths and load capacities according to your wishes. Please request a price quotation for this.

Telescopic slides for beams and floor levels

This extension system is only suitable for manual picking in pallet racks.

This enables easy handling for the operator and picker.

The following information must be taken into account for use:

- for shelf depth 1,100 mm
- max. 2 levels one above the other
- for beam widths 50 mm
- Pallet extension depth 70%
- always use the same pair of beam pairs
- Beams must be bolted to uprights (anti-lifting device)
- Standard extension for beam levels, tubular construction for shelf level

- only one extension per bay may be pressed at any one time
- Pallet load max. 800 kg per extension with 1 to 3 extensions
- Pallet load reduced to max. 500 kg with 4 extensions!
- Standard extension levels must be bolted to the rear beams and secured
- Floor levels are only anchored to the floor
- Design blue/galvanised

Also available in these colours:

The containment tray must be able to hold the contents of the largest container, but at least 10 % of the total volume of the containers stored in it. Insofar as the storage of substances hazardous to water is permitted in the further protection zone of water protection areas, the containment tray must be able to hold the total contents of the stored containers.

Hook-in troughs for shelf depth 1,100 mm for hanging between the beams

- with galvanised grating (load capacity 1.000 kg/m²)
- from 3 mm sheet steel
- suitable for 35, 40, 50, 55, 60 mm beam depth
- galvanised or RAL 5010

» Environmental shelving

for certified safety

The safe storage of substances hazardous to water is a particular challenge. Liquids can be stored in drums or cannisters in a professional and environmentally friendly way with the environmental shelving from SCHULTE Lagertechnik.

Properties

- Protection of seepage in the case of liquid leakage through welded spill containment tray in the base
- particularly stable due to truss strutting in the frame
- Easy to modify by simply plugging in the beams
- The height of the levels can be individually adjusted in increments of 50 mm
- Shelf only suitable for indoor installation

Benefits

- optimal storage of water-polluting substances
- 8 practice-oriented variants with drum supports
- Possible to fill with liquids directly at the racks

Drum supports For storing drums

- galvanised angle profiles
- for depth 800 mm
- for 50 mm beam depth

For drums		
60 Liter	46980 ■	101.88 €
200 Liter	46981 ■	106.03 €

Roller supports For storing drums

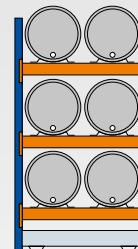

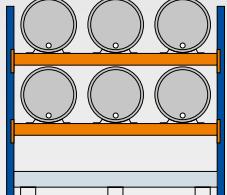

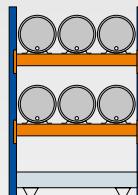

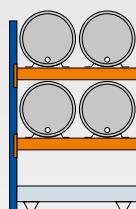

- enables easy rotation and positioning of the drums
- for depth 800 mm
- consisting of:
Drum support
+ roller support

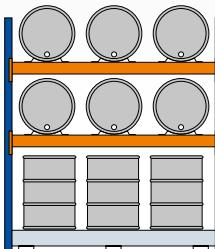

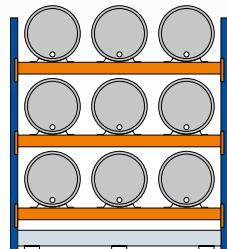

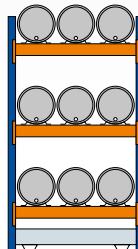

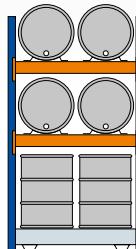

For drums		
60 Liter	46982 □	378.58 €
200 Liter	46983 □	382.71 €

Drum racks for 60- and 200-litre drums

Sheet metal storage box

For storage of sheet metal and panels

Properties

- 7 bays with galvanised sheet metal trays
- Clearance width 100 mm
- Supplied disassembled
- RAL 5010 gentian blue

Benefits

- the smooth-running steel roller ensures easy insertion and pulling out the plates
- The bevelled support tracks ensure secure hold for the items over the entire length
- Clearly arranged, space-saving storage ensures savings in time and costs

Height mm	Width mm	Depth mm	For panel sizes mm	Load capacity / bay kg

■ 5 days from warehouse · □ 5-6 weeks ready for dispatch

Profile storage racks

for upright storage of long items

Properties

- for the vertical storage of light long goods, e.g. roof battens, laying pipes, slats, beams etc.
- 10° inclination
- lateral load/cross load: max. 25 kg per divider arm
- Vertical load: max. 1,135 kg per bay
- Order partitioning arms separately for each shelf
- Due to transport reasons, the frames are delivered disassembled
- Frames blue, beams orange framework galvanised, partitioning arms blue

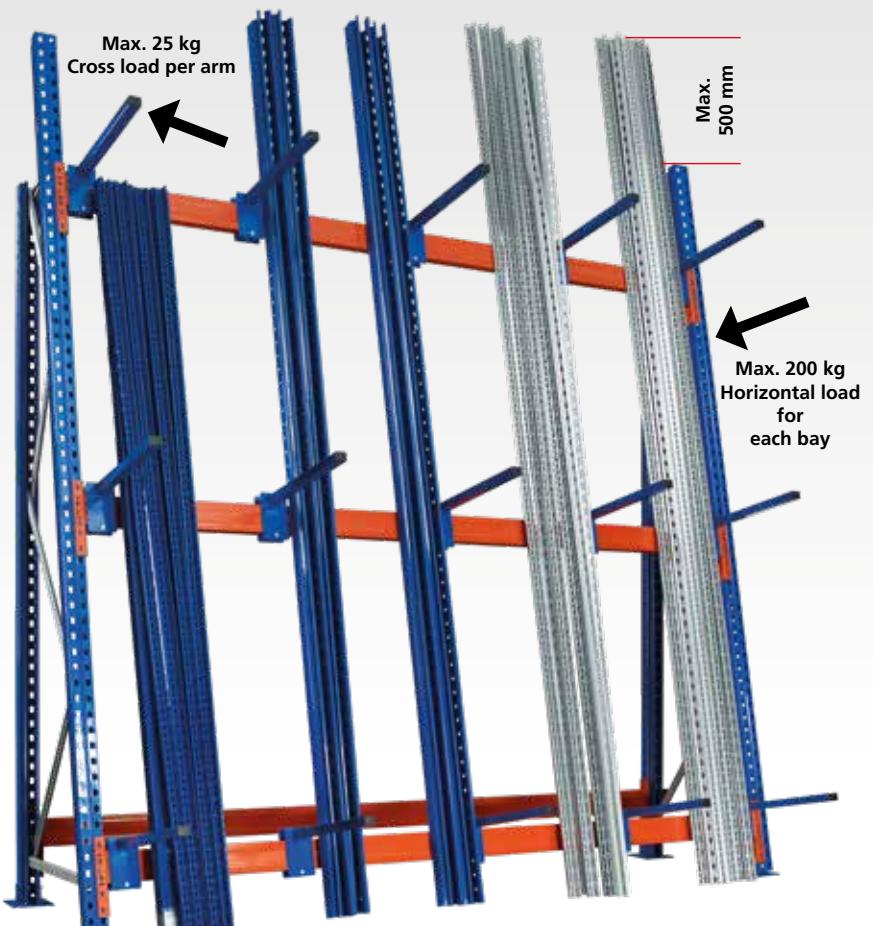

Benefits

- Clearly displayed storage of different materials and types
- Also ideal for use in self-service areas
- variable use of divider tubes enable flexible shelf widths

Scope of delivery

- Starter shelving:
2 frames, 5 beams (100 x 50 mm)
or
- Extension shelving:
1 frame, 5 beams (100 x 50 mm)
incl. base plates and ground anchors

optimised partitioning arm

Only suitable for beam 100 x 50 mm!

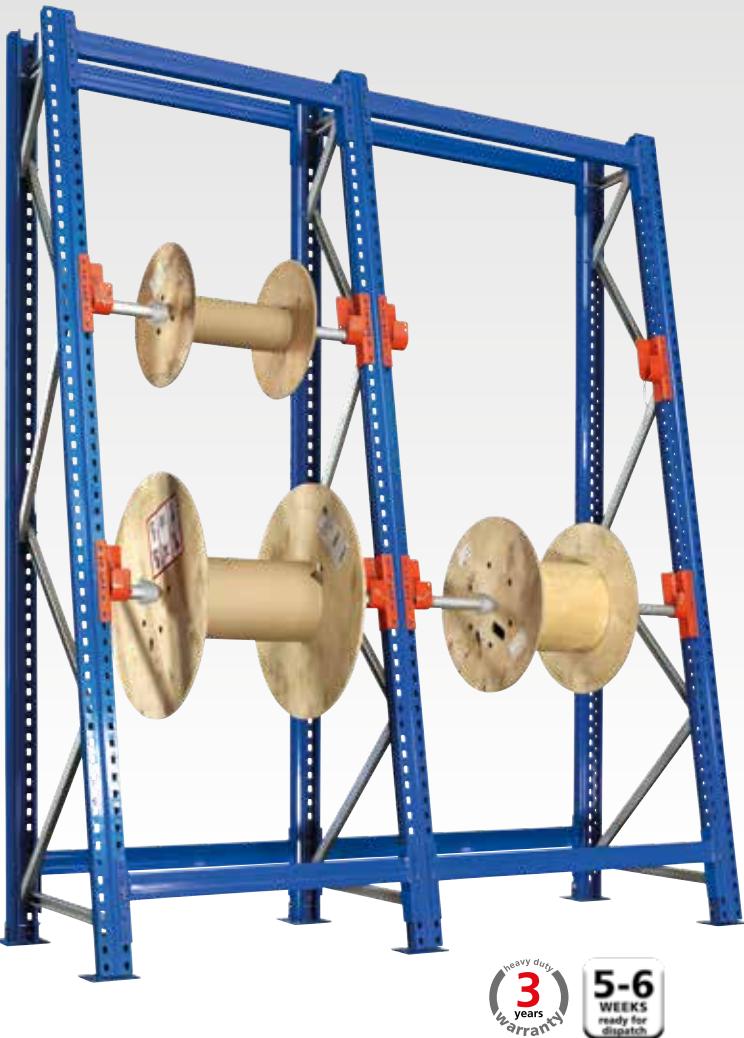

Assembly measurements

Total length of the racks:

- Total of all bay widths + (number of uprights x 86 mm)
- For starter shelving nominal width + 172 mm
- For extension bay nominal width + 86 mm
- allow at least 100 mm distance between the outer frames and walls or parts of the building for base plates

Note:

The items may only be **max. 500 mm** higher than the rack!

Cable drum racking Slanted roller system for light to medium loads

Properties

- unbraked version for exclusively manual operation
- 10° inclination
- Drum weight up to 500 kg
- Bay loads up to 1,500 kg
- Shelf widths 860, 1,160 and 1,360 mm
- Due to transport reasons, the frames are delivered disassembled
- Frame and beams blue, axle installation orange, galvanised framework

Benefits

- clearly arranged, space-saving and safe height storage of the cable drums
- Cable drums with different dimensions and loads can be stored without problems
- proven and expandable shelving system for different shelf widths and heights
- quick and easy to set up, extensions and additions possible at any time

Cable drum raking

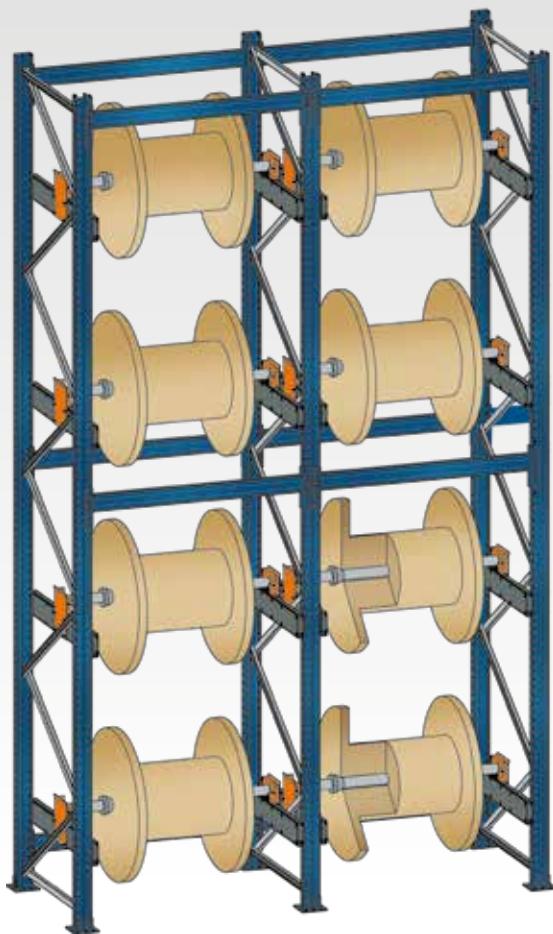

Descender system for heavy loads

Properties

- braked version **BlockRoll Type HB**
- the **Type HB** is suitable for the use of mechanically driven unwinding or winding machines
- Drum weight up to 1,000 kg
- Bay loads up to 6,000 kg possible
- Shelf widths 860, 1,160 and 1,360 mm
- For transport reasons the frames are delivered disassembled
- Frame and beams blue, axle supports RAL 7037 dusty grey, axle shells RAL 3020 traffic red, framework galvanised

Benefits

- clearly arranged, space-saving and safe height storage of the cable drums
- Cable drums with different dimensions and loads can be stored without problems
- proven and expandable shelving system for different shelf widths and heights
- quick and easy to set up, extensions and additions possible at any time

» Hot dip galvanised pallet racks NEW

for outdoor installation

2
WEEKS
ready for inspection

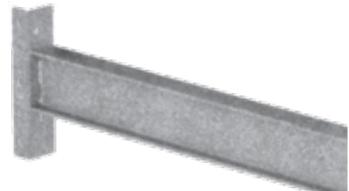

hot dip
galvanised

Starter set comprising 3 bays each 2,700 mm wide or 1,825 mm wide
 - 4 frames: Height 4.500 or 6.000 mm
 - 6, 9, 12 or 15 beam pairs
 - 16 Screw anchors + Foil cartridge
 - 16 levelling plates 2 mm
 - 1 load label DIN A3

Extension set comprising 1 bay
 2,700 mm or 1,825 mm wide
 - 1 frame: Height 4.500 or 6.000 mm
 - 2, 3, 4 or 5 beam pairs
 - 4 Screw anchors + Foil cartridge
 - 4 levelling plates 2 mm

Properties:

- Hot-dip galvanised surface coating
- Pallet weight: 1,000 kg
- for the storage of Euro pallets with a Pallet height of maximum 2,530 mm
- Hot-rolled IPE spars with 5 agraffe hooks
- Minimum requirement: 3 fields with at least 2 beam levels each
- Frame depth 1,100 mm
- Screw anchor incl. Foil cartridge
- Installation location according to load estimates, see page 3. (If you have any questions, please contact the SCHULTE sales engineer).

IPE beam:

- robust and durable design
- hot-rolled IPE 100 + 120
- with 5 agraffe hooks
- incl. securing screw

More information about hot dip galvanised pallet racks

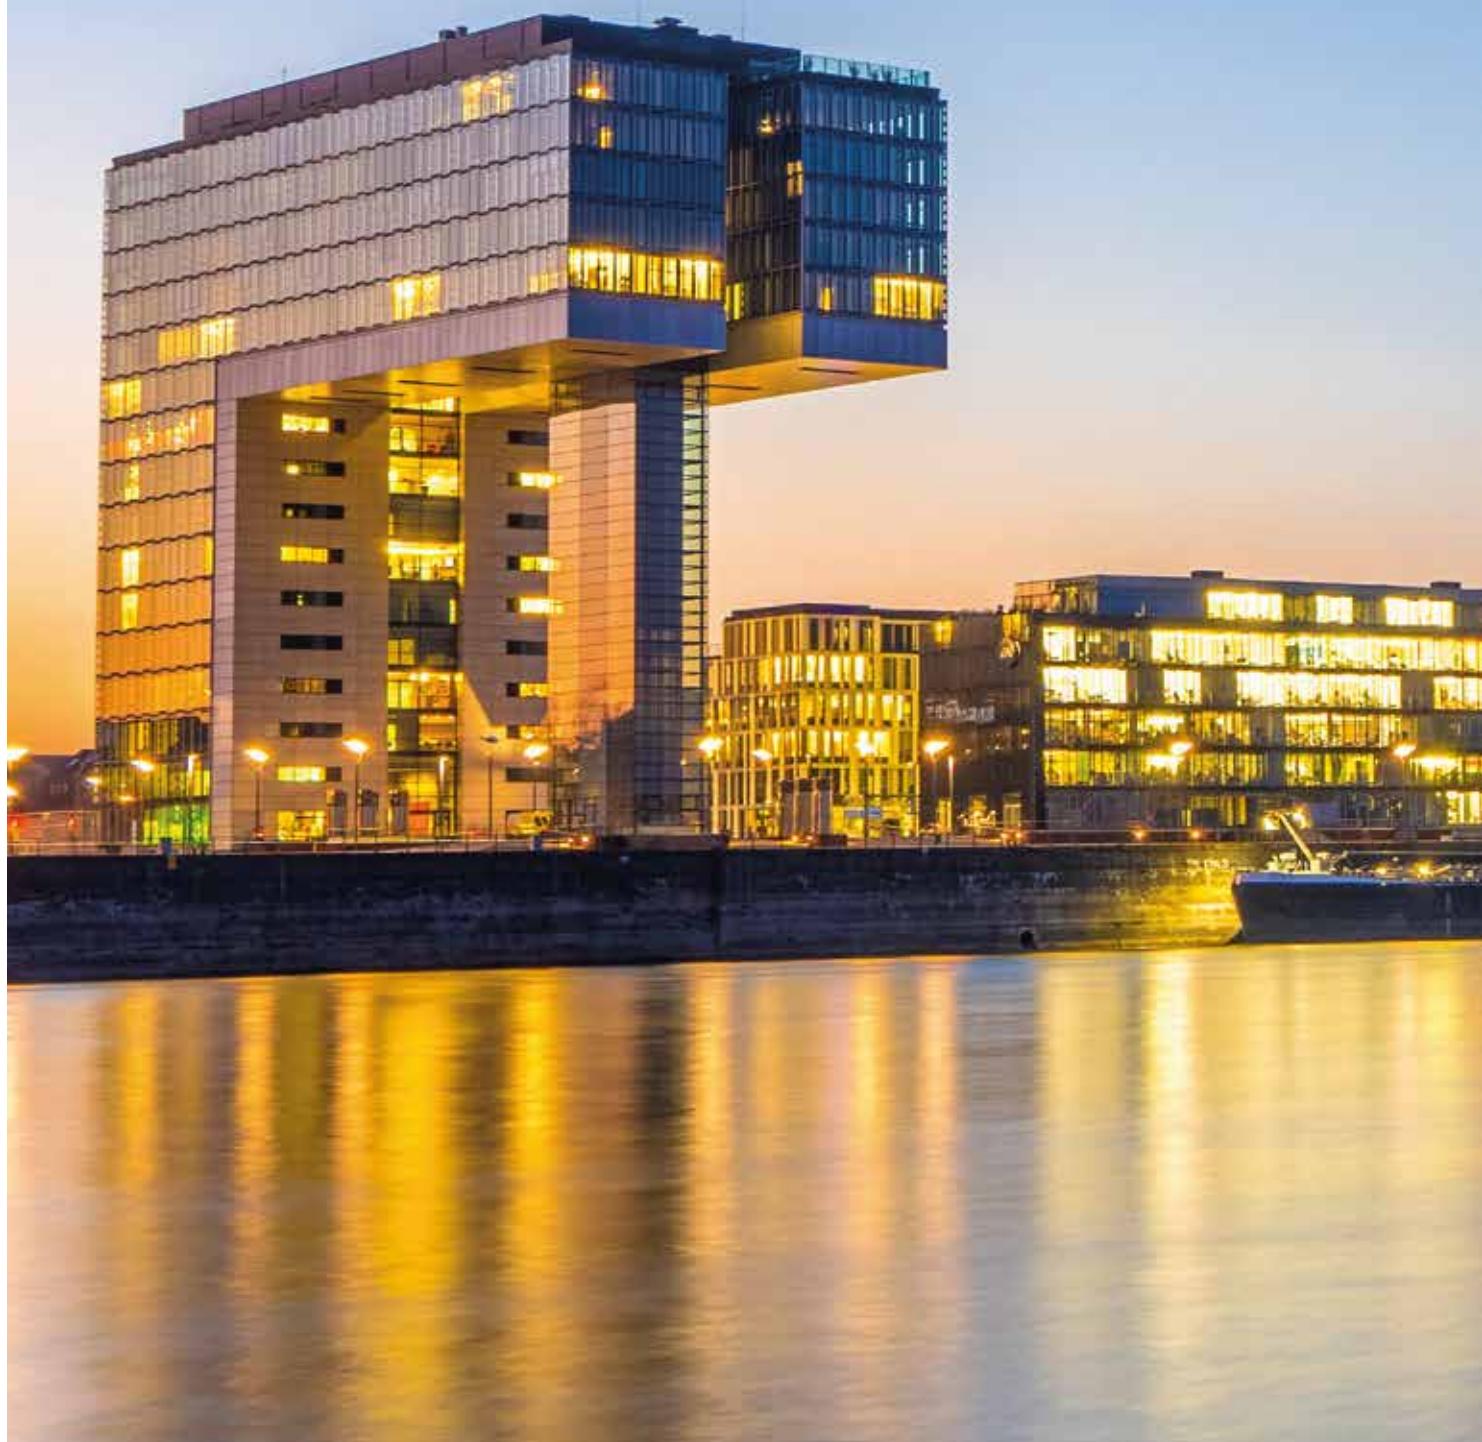

You can find more information and complete racking sets, prices and article numbers in our special brochure „Hot-dip galvanised pallet racking“ in the catalogue portal on our homepage.

Cantilever racking

Shelving systems and
mezzanine systems

» Cantilever racking

Strong, versatile, flexible

- Ideal for long and bulky loads such as pipes, rods or panels
- Particularly strong columns and profiles made of hot-formed IPE profiles
- Any number of rows of racking, one or two-sided use
- Customised solutions for the most varied of stock materials

» Cantilever arm and column profiles

suitable for all storage requirements

A cantilever rack is individually customised to the items. There are 3 different systems to choose from, which differ in their load capacity.

At **K 1000** the cantilever arms are already attached to the upright profiles welded on and thus offer uncomplicated and fast assembly.

For the systems **K 3000** and **K 6000** you can choose the cantilever arms as well as the upright profiles and thus adapt to your stock goods and premises.

The cantilever arms can be individually adjusted in height, so that the cantilever racking can be adapted to your stored goods at a later date.

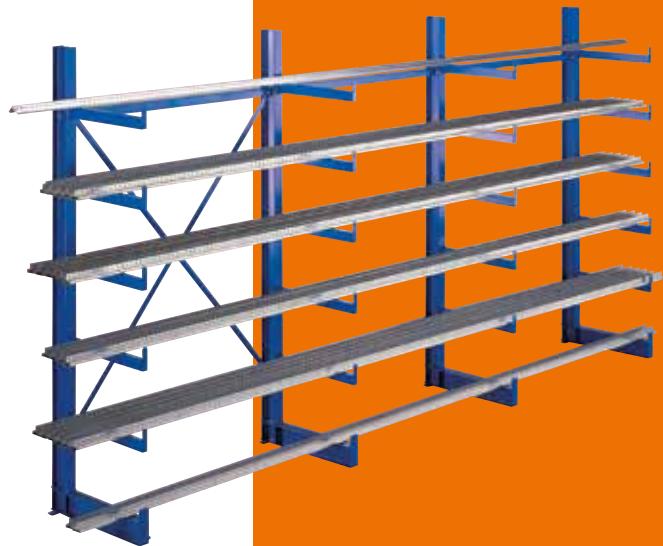

» 3 systems

to suit all requirements

K 1000

Complete set for light items

- Load capacity per arm 200 kg
- Particularly fast assembly thanks to the welded cantilever arms
- RAL 5010 gentian blue
- Available direct from stock

K 3000

For light and medium-heavy items

- Load capacity per arm up to 1,125 kg
- The K 3000 can be customised to meet the customer-specific requirements to ensure optimal utilisation of the surfaces and space
- Cantilever arms from 400 to 800 mm length
- Column profiles from IPE 120 to IPE 160
- Customised colours and sizes optional

K 6000

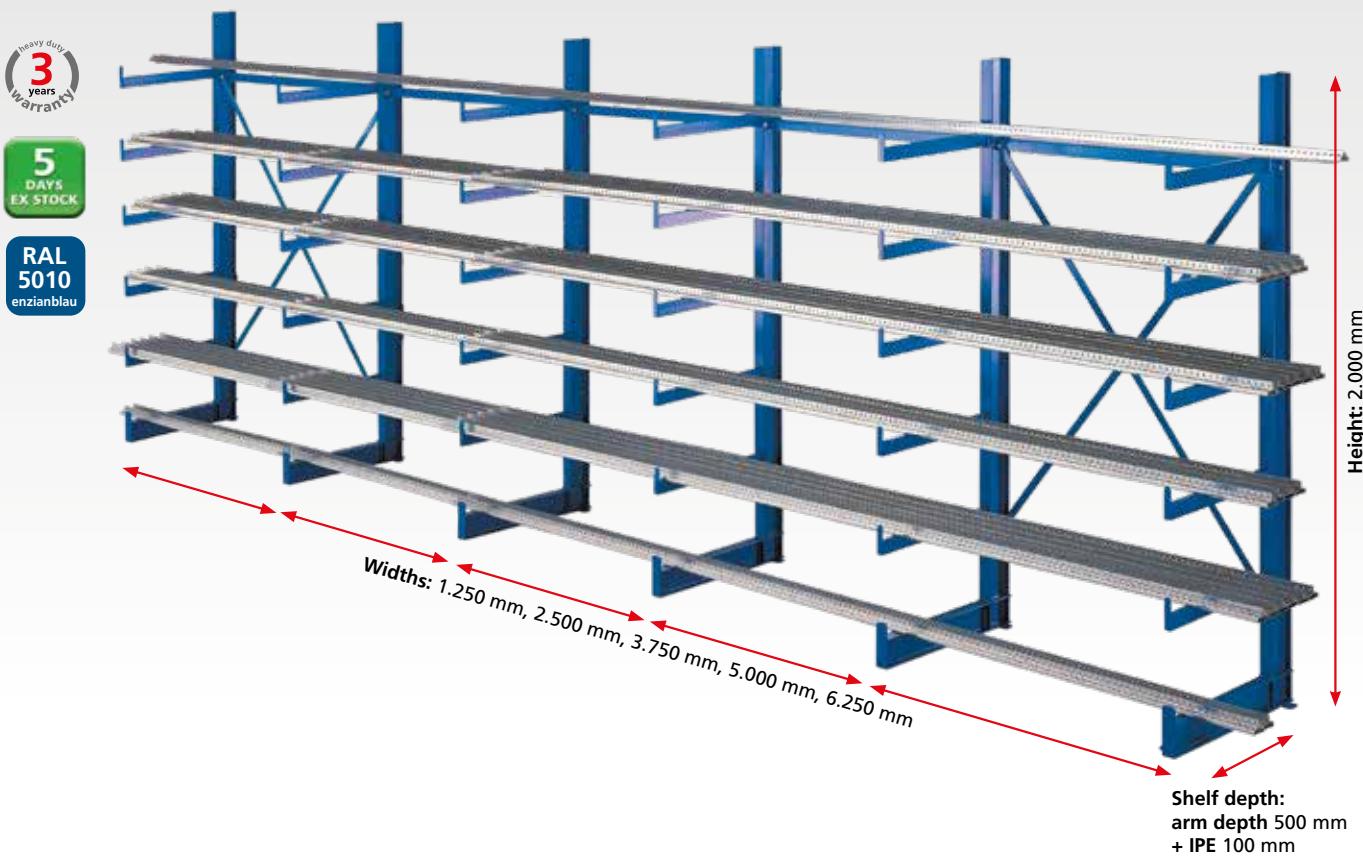

For heavy goods

- Load capacity per arm up to 3,900 kg
- The K 6000 cantilever rack flexibly fulfils all your space and storage requirements
- Cantilever arms from 750 mm to 2,000 mm length
- Column profiles from IPE 180 to IPE 330
- Customised colours and sizes optional

» K 1000 cantilever racks

One-sided or double-sided · for light loads

Properties

- Welded cantilever arms with roll-off protectors
- Load capacity per cantilever arm maximal 200 kg
- Clear height between the cantilever arms 280 mm

- Height: 2,000 mm
Arm depth: 500 mm
Width: 1,250 mm
- stable floor anchoring through supplied screw anchors
- RAL 5010 gentian blue

Benefits

- Optimal storage of profiles, rods and pipes
- Optional one-sided or double-sided use
- Easy and fast assembly with welded cantilever arms
- Available direct from stock

Planning

Necessary planning factors:

The specified load capacities apply to uniformly distributed loads per each cantilever arm.

The cantilever racking units must be braced in every 5th bay with a cross brace.

Safety

Floor anchoring is necessary to ensure the stability of cantilever racks.

Therefore, 2 bolt anchors and 2 holding plates are included in the scope of delivery per stand.

Assembly measurements

The side overhang of the stored items may not exceed max. of half the dimension between axes.

Height:	2,000 mm
Width per bay:	1,250 mm
Rack depth one-sided:	600 mm
Rack depth double-sided:	1,100 mm

K 1000 cantilever racks

One-sided

Basic rack, comprising:

- 2 one-sided columns each with 5 welded cantilever arms
- 1 cross brace for bracing
- 2 horizontal connectors
- 4 screw anchors and 2 holding plates for floor anchoring

Extension bay like starter shelving:

- However only 1 column
- Without cross braces

K 1000 cantilever racks

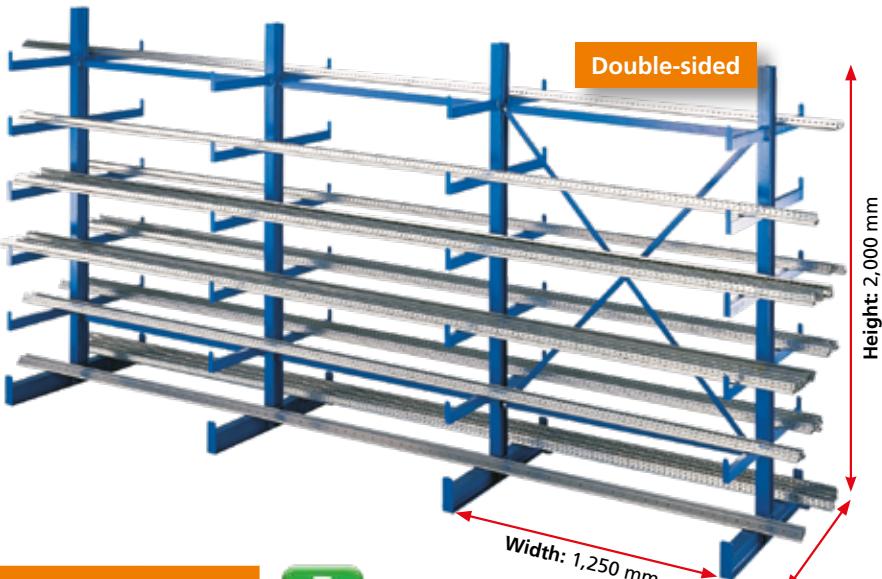

Double-sided

Basic rack, comprising:

- 2 two-sided columns each with 10 welded cantilever arms
- 1 cross brace for bracing
- 2 horizontal connectors
- 4 screw anchors and 2 holding plates for floor anchoring

Extension bay like starter shelving:

- However only 1 column
- Without cross braces

» K 3000 cantilever racks

One-sided / double-sided · IPE 120 - 160 for medium loads

Other colours on request

Properties

- of the standing, lying or hanging storage of pipes, profiles and other bulky materials
- The height of the cantilever arms can be adjusted in increments of 100 mm
- Any number of rows of racking, single or double-sided use
- Roll-off protectors for safe storage optionally as welded or plug-in
- Customised dimensions and higher load capacities on request
- Optimised load capacity values through bolting of base and columns
- Delivery of the cantilever arm uprights disassembled

Benefits

- customised manufacturing for an optimal adaptation to the stored goods and the spatial conditions
- Height flexibility when loading

Planning

Necessary factors for planning:

- Arm load capacity or level load capacity (not including base level)
- Column load capacity, calculated by the number of the storage levels (not including base level)
- Centre distance based on the items

Within the first 5 bays, 2 bays must be equipped with cross braces. Then the 6th bay, then every other 5th bay.

Safety

Floor anchoring is necessary to ensure the stability of cantilever racks.

Per upright, the following are included in the scope of delivery:

- 2 heavy-duty anchors
- 1 spacer plate 2 mm
- 1 spacer plate 3 mm

Assembly measurements

The side overhang of the stored items may not exceed max. of half the dimension between axes.

Upright heights:
IPE 120 = - 10 mm
IPE 140 = + 10 mm
IPE 160 = + 40 mm

K 3000 complete racking

One-sided

- 4 cantilever arms and 1 base level per columns (= 5 storage levels)
- Including horizontal connector, cross brace and dowels
- IPE 120 version columns RAL 7001 silver grey
- IPE 80 cantilever arm version RAL 3000 fire red

- Cantilever arms with welded-on roll-off protection (height 37 mm)
- Planning note: Height -10 mm

K 3000 one-sided

Accessories

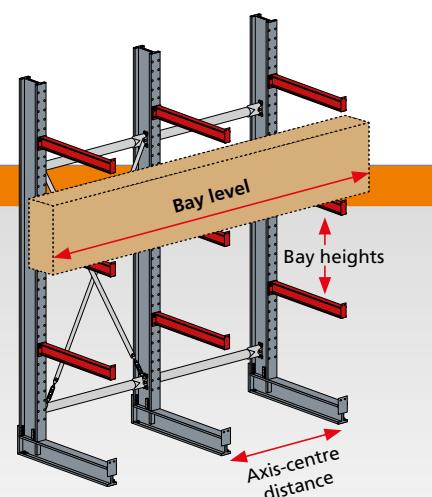

K 3000 overview

System components and component parts

Determine the system components

1. Determine the axis-centre distance taking into consideration the bowing under load and length of your items.
2. This will provide you with the number of required columns.
3. The height of the bays can be determined based on the items (this gives you the number of arms per columns).
4. The arm load capacity is based on the weight of the goods to be stored (**in one bay level**) divided by the numbers of the arms.
5. The sum of the arm loads results in the required column load and thus the column type.
6. Within the first 5 bays, 2 bays must be equipped with cross braces. Then the 6th bay, then every other 5th bay.
7. For every rack bay up to a height of 5,000 mm 2 horizontal connectors are required.

Cantilever arm columns

Other heights on request

Depths: One-sided:

750 mm
1,000 mm
1,250 mm
1,500 mm
1,750 mm
2,000 mm

Properties

- of the standing, lying or hanging storage of pipes, profiles and other bulky materials
- The height of the cantilever arms can be adjusted in increments of 100 mm
- Roll-off protectors for safe storage, plug-in

- Any number of rows of racking, one or two-sided use
- Customised dimensions and higher load capacities on request
- Optimised load capacity values through bolting of base and columns
- Delivery of the cantilever arm uprights disassembled

Benefits

- Bolting the cantilever arms for simple assembly
- customised manufacturing for an optimal surface and room use
- optimally tailored to customer-specific requirements adapted load capacity of the cantilevers

Planning

Necessary planning factors:

- Arm load capacity or level load capacity (not including base level)
- Column load capacity, calculated by the number of the storage levels (not including base level)
- Centre distance based on the items

Within the first 5 bays, 2 bays must be equipped with cross braces. Then the 6th bay, then every other 5th bay.

Safety

Floor anchoring is necessary to ensure the stability of cantilever racks.

Per upright, the following are included in the scope of delivery:

- 2 heavy-duty anchors
- 1 spacer plate 2 mm
- 1 spacer plate 3 mm

Assembly measurements

The side overhang of the stored items may not exceed max. of half the dimension between axes.

Column heights:

- IPE 180 = - 30 mm
- IPE 200 = - 10 mm

Strong, versatile, flexible

With racking systems and platforms from SCHULTE Lagertechnik, every centimetre of the storage room is used. They enable the optimum use of the total height of your storage space by multiplying the storage area and thus offer efficient solutions with optimal and economical use of space on different levels.

Whether as a shelving system, a mezzanine system or a steel mezzanine system – we are happy to advise you and find the right solution to allow you to make optimal use of your space.

» Multi-storey shelving systems

from plug-in system and steel construction elements

- Multiply your storage capacity
- efficient solution with optimal and economic use of space at different levels
- all advantages of the SCHULTE Lagertechnik plug-in system
- later increase can be taken into account in the planning
- up to 4-storey construction possible

Page 258- 265

» Mezzanine systems and Steel platforms

comprising modular system components

- Multiplication of the storage level with the same floor space
- ideal combination as picking and storage area
- an optimisation of the column grid ensures that the spans are tailored to requirements
- Can be completely disassembled and reused, allowing components to be adapted to new circumstances
- up to 4-storey construction possible

» Consulting, planning & installation for inspiring solutions

The result of an efficient and innovative shelving system is obtained by optimal planning and individual advice. Your wishes are analysed by our experienced area sales managers and competent technicians. We can design an optimal solution for your stored goods and your existing premises with our versatile shelving systems. You will benefit from our decades of experience and state-of-the-art technology for planning and visualisation of shelving systems.

Consultation

Get more out of your warehouse!

Scarce space, rapidly changing stored goods, time and cost pressure – the demands on modern warehouses are high. As a leading manufacturer of industrial shelving and an expert in warehouse logistics, we know these challenges first-hand. SCHULTE Lagertechnik therefore takes over the complete planning of your storage facilities for you, geared to short order picking routes and optimum storage capacities. In this way you maximise your storage utilisation level.

Benefits

- our area sales managers and technicians will advise you directly on site
- Detailed analysis of premises, logistical procedures and processes
- Identification of bottlenecks and potential for improvement

Planning

We plan down to the smallest detail!

You will receive competent support from idea to the creation of a CAD visualisation of your project. Benefit from our individual storage and logistics concepts for your industry-specific requirements.

Benefits

- You will find out what potential for improvement your warehouse has
- You will be advised by experienced warehouse experts in all planning phases
- You receive a logically optimised storage concept for your specific requirements, saving you time and money

Assembly

Safety and efficiency through professional assembly!

Our fitters ensure that everything runs quickly and smoothly on the final steps to your carefully planned warehouse. This gives you the certainty of successfully completing your storage project. With assembly services from SCHULTE Lagertechnik you increase storage safety and meet insurance requirements.

Benefits

- You can use your warehouse quickly and safely
- You ensure that your shelving system is installed correctly
- You avoid damage caused by assembly errors and meet insurance requirements

» System design and multilevel units

Multi-storey shelf racking systems

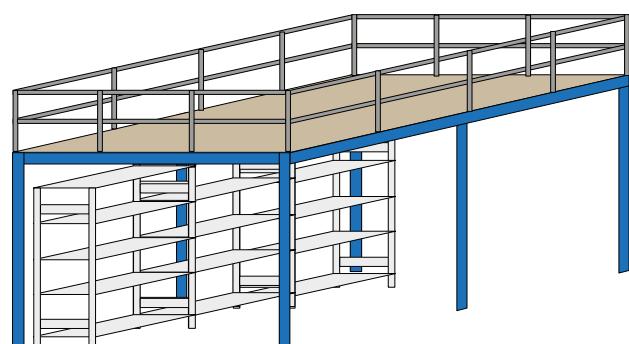

- Heights up to 13 metres
- Levels adjustable in 25 mm increments
- Shelf loads 85 kg, 150 kg, 250 kg and 330 kg (with beams, up to 410 kg possible)
- Shelf depths 300, 400, 500, 600 and 800 mm
- variable shelf widths: 750, 1,000, 1,300 and 1,500 mm

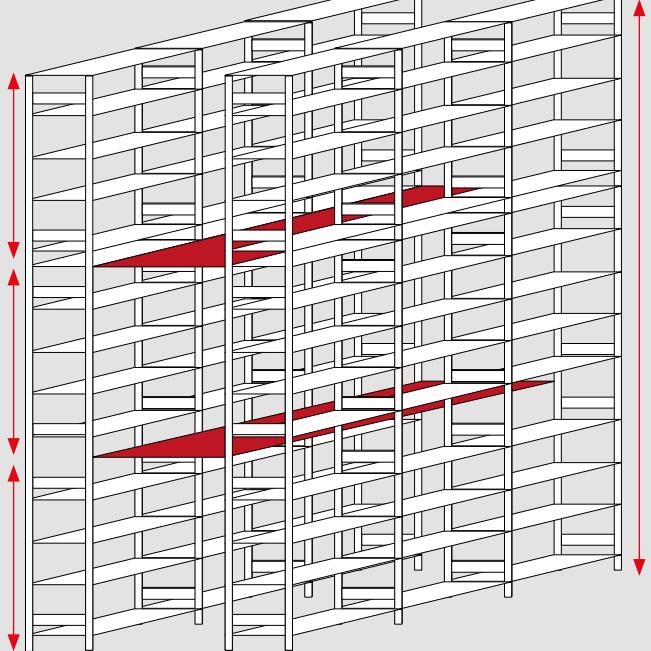

2-storey shelf racking system

Mezzanine systems and Steel platforms

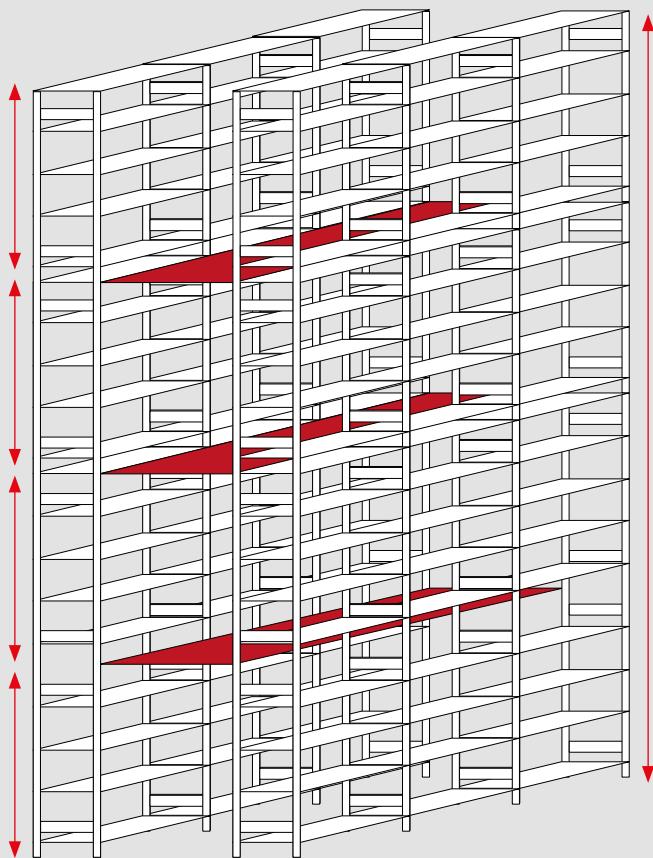

- Column heights up to 12 metres
- Loads up to 2,000 kg/m²
- Column distances of up to 9 metres can be realised
- cold-rolled profiles

Transfer stations

Convey goods safely up

- For transfer and subsequent storage of pallets on the upper floors
- **Swivel locks** offer optimum personal protection during the transfer of stored goods. The railing is closed either at the front or the back.
- **Sliding doors** allow a fast and safe opening and closing of the loading area.
- **Pallet transfers** with red-white chain and a retracted transfer are among the solutions recommended by the trade association

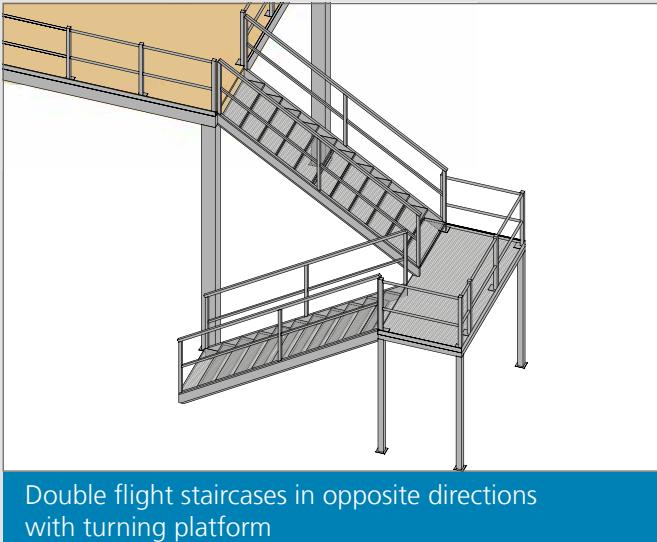

Stairs

quickly get to any storey

- safe and comfortable access to the upper floors
- **stable safety railing** powder-coated with hand and knee rail and unrolling edge
- **Cheek stairs**
 - with exit, intermediate or corner platform possible
 - with platforms for changing direction
- **Steps and cover made of gratings**
 - in different dimensions, loads and designs
 - galvanised

Railings & Handrails

high security and great optics

- stable design with handrail, knee rail and skirting board
- functional safety in an elegant look with glass and stainless steel
- Safety glass construction without supports for continuous transparency
- rounded handrails

Handrails

Stainless steel railing with glass

System railings

Platform covers

Chipboards and gratings

Chipboards

- in different versions, e.g. 30 and 38 mm thick
- various decors of the upper side with or without anti-slip surface
- With standard and high level of compression
- Fire protection class B1 and B2 possible
- Wood and/or steel tongue and groove joint

Gratings

- in different dimensions, loads, mesh sizes and designs
- necessary for fire protection reasons or for ventilation/smoke extraction
- for particularly high loads on the picking paths
- high light transmission

Lighting

through modern LED technology

- ideal lighting of the walking paths
- lighting system can be used flexibly
- energy-saving solutions possible through the use of motion detectors
- different light outputs and light colours possible
- LED tubes with lengths from 600 mm to 2,400 mm
- Series connection with up to 20 tubes possible
- quick and easy suspension by means of magnetic holders

Load elevators

for professional use

- Load lifters and load elevators simplify the unmanned vertical transport of goods to the upper floors
- Lifting height up to 12 meters
- Load lifters transport up to 500 kg
- Load elevators with a load capacity of up to 3,000 kg
- extremely low-maintenance load elevators, thus avoiding unnecessarily long downtimes and maintenance costs

Fence systems

for the separation of storage areas

- stable and flexible machine guards, storage and industrial walls
- quick and easy separation of storage areas
- to create night deliveries (see photo)
- available in different mesh sizes
- Standard finish: galvanised, RAL colours available on request

Lockable areas

for the protection of your goods

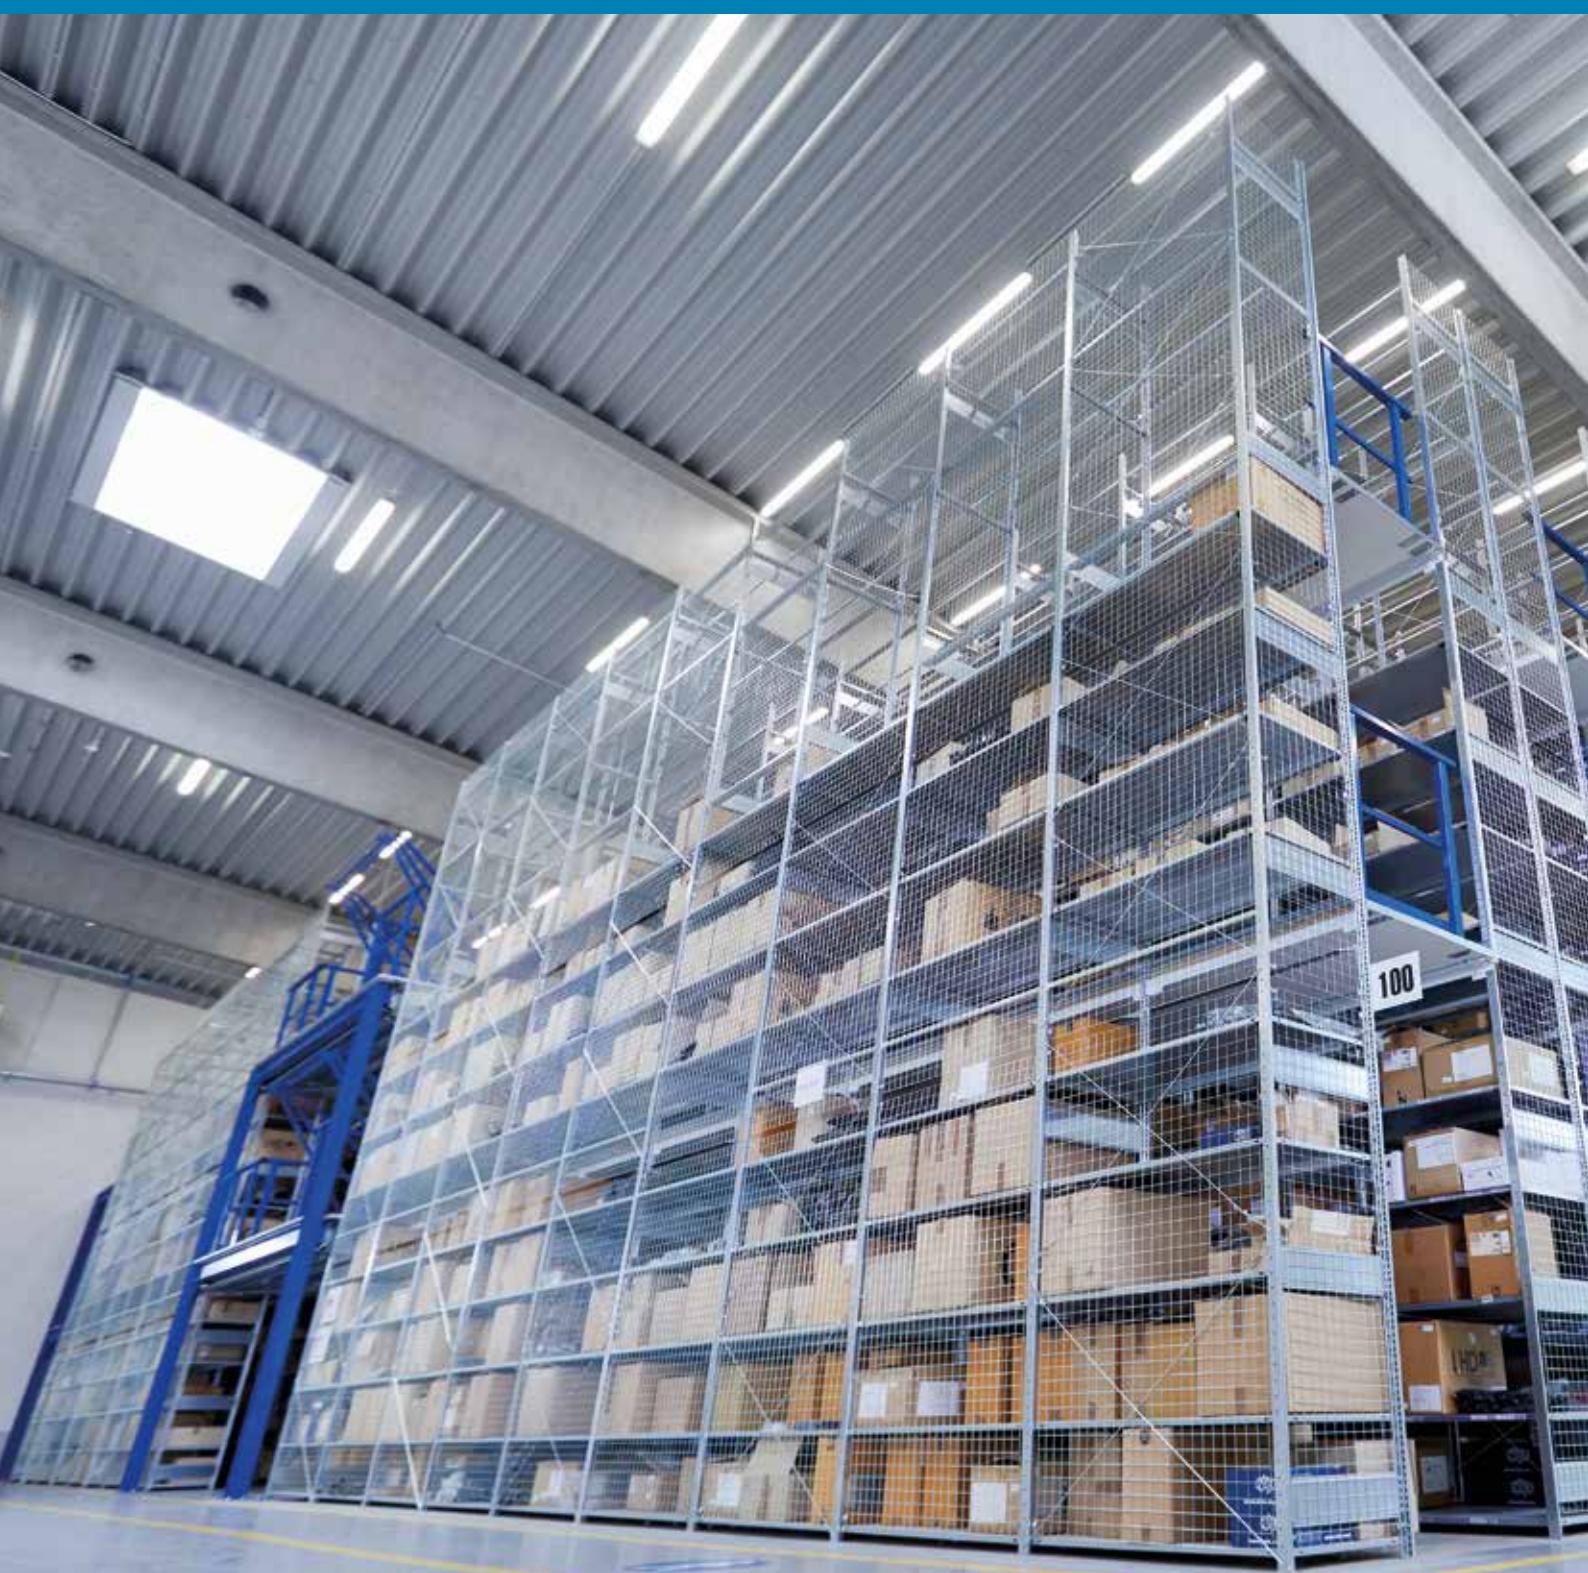

- Lockable doors offer protection against unauthorised access to sensitive storage areas
- robust supports and stable doors
- Door hinge can be mounted taking into account the escape routes
- Swing doors in single and double design
- single or double-sided sliding doors
- Escape doors with reach-through protection possible

Shelving systems and
mezzanine systems

» Multi-storey shelving systems

Modular and compatible

With multi-storey shelving systems from SCHULTE Lagertechnik you can achieve a multiplication of your storage capacity. The efficient solutions lead to an optimal and economic use of space on different levels. Use all advantages of the SCHULTE Lagertechnik plug-in systems, including the optimum shelf heights due to the combination of the 25 mm edge of the **MULTIplus** shelves and the 25 mm increment perforation as well as the wide range of accessories.

On request, adding another storey to your warehouse can be taken into account in the planning. The construction method allows a multi-storey building format.

At a glance:

- simultaneous picking on several levels enables faster order processing
- Heights up to 13 metres
- all advantages of the SCHULTE storage technology plug-in system can be used
- Levels adjustable in 25 mm increments
- Shelf loads 85 kg, 150 kg, 250 kg and 330 kg (with beams, up to 410 kg possible)
- Shelf depths 300, 400, 500, 600 and 800 mm
- variable shelf widths: 750, 1,000, 1,300 and 1,500 mm
- multi-storey construction (2, 3 or 4 storeys)
- galvanised or plastic powder-coated

Multi-storey shelving systems

Shelving systems

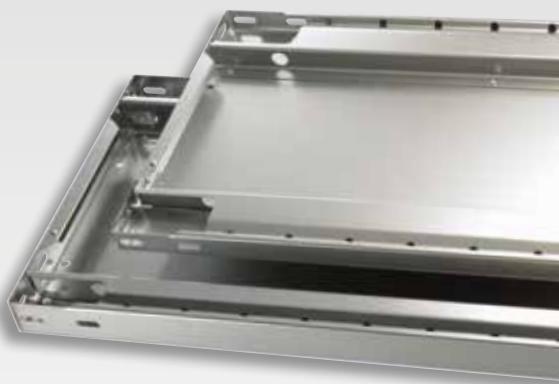

» Using rooms cleverly

Combinations of shelving systems and steel construction

MULTIplus shelves

- Shelf loads 85, 150, 250 and 330 kg (gradable up to 410 kg)
- Levels adjustable in 25 mm increments
- **MULTIplus** shelves with 25 or 40 mm edge height
- variable shelf widths: 750, 1,000, 1,300 mm
- unique flexibility of height adjustment and thereby highest possible utilisation of the shelf volume

MULTIplus T-section frame

- T-profile frame one-piece up to 7,500 mm height
- Levels adjustable in 25 mm increments
- can be combined with solid sheet metal, perforated sheet metal, wire mesh side walls
- Shelf depths of 300, 400, 500, 600 and 800 mm, as double rack also depths up to 1,600 mm possible

Surfaces in a diverse range

A large selection of colours allows company colours to be incorporated into the warehouse or shop floor. Additional colours on request.

SPRINKLERplus[®] Fire safety shelves

for shelving systems with special requirements

- Shelf load up to 100 kg
- with 40 mm edge height
- the shelf complies with VdS guideline CEA4001: at least 50% of the total area as open area
- galvanised or powder coated
- water permeable - for use with sprinkler systems
- air permeable for better air circulation and translucent for a higher light yield

Available from 500 pieces per type.

» Compact appearance in the Corporate design

The thing is actually clear: the larger a warehouse, the more room to grow. But what if the space is exhausted? Then it says: Optimise processes and increase the efficiency of procedures. This is what happened for our customer "Turbo-Mot" in its special workshop for turbochargers.

Reconditioned turbochargers are in demand. Cause for celebration for the East Westphalia-based company Turbo-Mot. But also for growing pains, as their storage system simply could not cope with annual volumes of 7,500 turbochargers. The situation resulted in bottlenecks both in the warehouse and in work processes.

Together with the customer, SCHULTE Lagertechnik developed a solution that implied both an optimal use of the existing storage space and an attractive appearance of the racking system. With the establishment of a new, two-storey storage block, over a surface area

of 110 m², space for growth was created again. The storage area was increased to 700m² with this concept. From goods receipt to collection, everything was integrated into two separate shelving systems, some of which was dust-proof. Walking distances were reduced, the workstations moved directly to the warehouse and the employees have everything ready to hand faster than before.

The new arrangement also sends out a signal to customers, as they see that order and cleanliness matter. As a special highlight, the complete system was also equipped with solid sheet metal rear walls and side walls in the company's corporate colours. This has resulted in a "red box" that offers employees a modern working environment. For the company Turbo-Mot GmbH this is an important argument in the acquisition of new Employees and trainees... because that makes an impression.

At a glance

Requirements

- » Increase of the storage capacity in the existing storage areas

Scope of work

- » Consulting, planning, delivery and assembly

Object data

- » Organisation system by means of dividers, scanner rails, etc. and side parts as well as frames in corporate colour
- » approx. 1,100 **MULTIplus150** and **MULTIplus250** shelves

Special features

- » 2-storey facility in the corporate colour red with white surrounding edge

Benefits

- » Greater storage capacity and faster order processing through centralisation of the plant

» Plenty of room on three floors!

The LHD Group Deutschland GmbH equips people from a wide variety of professions with suitable clothing and in some cases also equipment. One of the core segments is the Fire sector. Under the brand name LION, the Wesseling-based specialist develops and manufactures personal protective equipment and daytime service clothing for fire brigades worldwide. It is obvious that comprehensive security know-how is required here.

In 2018, LHD decided to relocate its international headquarters to Wesseling, where it will also merge the previous warehouses in Osnabrück and Zwenkau into one central warehouse.

It was a particular challenge to implement the project in a relatively short time. First of all, various legal hurdles had to be overcome with regard to statics, safety and fire protection. On the basis of comprehensive project experience, SCHULTE was able to contribute to solutions that cleared all the hurdles to obtaining building permission.

In the planning of the entire plant, it was then important to create a warehouse that initially offers sufficient space for almost 500,000 individual items (buttons, trousers, shirts, protective suits, shoes, helmets, etc.). But not only that. Of course, the entire goods handling was also to be optimised.

As a result, SCHULTE Lagertechnik proposed two shelf racking systems for the two LHD warehouses. Two three-storey MULTIdplus shelving systems have been built on hall area of around 2,750m². They have 8,180 shelves for flat merchandise and clothes rails with a total length of 2,028 m for hanging garments.

It was important to structure the entire warehouse as cleverly as possible in order to be able to store and retrieve goods more quickly and shorten delivery times for customers. To accelerate the flow of goods, SCHULTE project engineers have created simple and short goods routes. If new goods

At a glance

Requirements

- » Implementation of a shelving solution for a new central warehouse
- » Creation of storage space for almost 500,000 individual articles for horizontally flat-packed and vertically hanging goods
- » fast, ergonomic storage and retrieval of goods with short picking routes

Scope of work

- » Consulting, planning, delivery and assembly

Object data

- » three-storey MULTIplus shelving systems on a surface area of 2,750 m² and a height of 7.50 m
- » 8,180 shelf compartments (flat-packed goods)
- » 2,028 m clothes rails (hanging goods)
- » Integration of steel and portal construction
- » Goods transfer takes place via tilting sluices
- » Integration of an elevator system

Special features

- » Strict building regulations (statics, safety, fire protection)
- » Installation of the second installation during running operations

Benefits

- » central storage of the entire LHD goods portfolio
- » high clarity, quick location
- » fast delivery, shorter delivery times, higher customer satisfaction

come in, they are transported to the plants by forklift truck. If it has to go to the upper two floors, the forklift truck raises the goods and transfers them via a tilting sluice. The goods no longer have to be carried upwards by hand.

The individual shelf bays and corridors are arranged in such a way that paths can be run in S-line form during order picking. This also saves time and relieves the burden on LHD employees*. In order to easily transport the picked goods to the ground floor and to the dispatch area, the system is equipped with a goods lift. This is also a clever SCHULTE idea.

The assembly of the system was exciting. Because the goods had to be moved quickly, not much set-up time was available. Over a period of 12 weeks the SCHULTE fitters worked at full speed on the realisation of this major project, in which ultimately more than 200 t of material were used. Every day SCHULTE trucks brought new material which had to be pre-assembled, stored and finally assembled on site. After completion of the first system, LHD started to put away the goods. Parallel to this, SCHULTE installed the second shelving system. This was ultimately only possible through close coordination and good communication.

» Mezzanine systems and Steel platforms

modular, expandable, strong

With the mezzanine systems and steel platforms from SCHULTE Lagertechnik you can achieve a multiplication of the storage level with the same floor space. At the same time you are able to use them as picking and storage space.

An optimisation of the column grids ensures that the spans are tailored to requirements. The mezzanine systems are also reusable. They can be dismantled and reassembled at another location and can be adapted to new circumstances. The construction method allows a conversion up to 4 storeys.

At a glance:

- Column heights up to 12 metres
- Loads up to 2,000 kg/m²
- Column distances of up to 9 metres can be realised
- cold-rolled profiles
- multi-storey construction possible (2, 3 or 4 storeys)
- galvanised or plastic powder coated

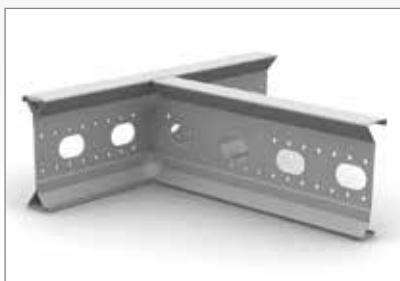

» Storage platforms

» Safe and compact

System platform in cube construction

In business-to-business, after-sales service is becoming increasingly important. When a company grows, the requirements increase. Especially those who are active on world markets must adapt their own processes to the constantly changing framework conditions.

This challenge was also faced by an apparatus and plant manufacturer in the field of environmental technology. The medium-sized company wants to score points with customers with excellent services and thus lay the foundation for long-term partnerships. To this end, all after-sales services should come from a single source, including short distances and fast response times.

The plant manufacturer has redesigned its warehouse so that it can quickly supply all customers around the globe with spare parts. The goals were to create more space for more parts, to realise faster processes and to keep the possibility open to react flexibly to new situations.

During the on-site needs analysis, a warehouse based on mezzanine systems, shelving and pallet racks was

quickly identified as the ideal solution. Thanks to a three-storey construction method, the room height of the existing hall can now be fully utilised. The load capacity of the platform is 1,000 kg per square metre. The compact cube, with a floor area of 264 m², offers storage space on 764 m², which means a tripling of the storage area. Large storage reserves could be created already during the first expansion stage achieved due to the additional space gained.

In the cube, all parts are found in one place in a very small space. Two stairways and transfer stations with self-closing swivel gates make it easier for employees to quickly find the required articles. Long routes are no longer necessary for the fast-movers: They are stored ready to hand on the ground floor.

For the storage of the small parts 1,700 **MULTIPlus250** shelves were used. In the plug-in system, they enable a quick reaction if the requirements change. The customer was free to choose the colour: The steel parts are finished in RAL 7035 light grey, the chipboards panels are provided with the anti-slip surface "Stone", whereby the underside in the storeys is

white, which increases the light yield. To protect the stock items from unauthorised access, the ground level is completely enclosed by mesh-wire partitioning. Access is only possible through a two-metre wide sliding gate, which is secured by an access control system.

With the individual solution based on the compact mezzanine system, the plant manufacturer was able to compress its available storage space and create an expandable, future-proof storage solution. It is the basis and prerequisite for efficient spare parts delivery and perfect all-round service all over the world.

At a glance

Requirements

- » Utilisation of the room height through three-storey construction and thus tripling of the storage area

Scope of work

- » Consulting, planning, delivery and assembly

Object data

- » two-storey mezzanine system with a load capacity of 1,000 kg/m²
- » 2 staircases and transfer stations with self-closing swivel doors
- » approx. 1,700 MULTIplus250 shelves

Special features

- » Ground floor completely enclosed by with grate partitions; access through 2,000 mm wide sliding gate

Benefits

- » Access control on the ground floor
- » enormous storage space compression due to 3 levels and compact cube design

» Storage and presentation in unique ambience

The modern shop concept allows stationary B-to-B commerce to achieve growth. Proof of this comes from the production supply dealers, Coenen, who, together with SCHULTE Lagertechnik completely redesigned their sales space in Neuss and increased its sales area to 1300 m².

Since then, not only can all articles be stocked here in sufficient quantities, it has been possible to create a strong buying incentive for the customers thanks to the type of goods presentation. The central design element of this is the mezzanine system by SCHULTE Lagertechnik. Using a modular principle, a U-shaped gallery has been built along the wall in the Coenen building; thus creating additional exhibition space. With a special construction the railings are completely made of glass and stainless steel without any supports. Because the guardrails are see-through, it is possible to look up from below into upper storey and view the articles presented there. The result is a modern, day-

light-flooded salesroom with a high-quality industrial design made of steel and glass, which picks up the trend of the time and optimally stages the goods on offer.

The new shop is a sales outlet and a showroom in one, and presents the Coenen product range in the best light. The shop thus reflects the identity of the company and plays an important role in company strategy.

For the modern architectural design, the mezzanine system was selected as the central design element for the shop, after consultation with SCHULTE Lagertechnik. The unusual concept not only achieved an additional exhibition area of 331 m², but also, thanks to the custom-made design, achieved the balancing act between functionality and upmarket industrial design.

At a glance

Requirements

- » efficient use of space and enlargement of the sales and storage areas
- » Visibility of the upper storage level for the new health and safety exhibition

Scope of work

- » Consulting, planning, delivery and assembly

Object data

- » Mezzanine system from SCHULTE Lagertechnik with 1,200 kg load capacity per square metre and large spans meaning few supports required on the lower level

Special features

- » All-glass railing without supports, sophisticated design through stainless steel handrails
- » spacious staircases with solid oak steps

Benefits

- » Enlargement of the sales and storage area by 331 m²
- » sales-promoting ambience through sophisticated design in an industrial look

» Safety comes first

Storage facilities in Germany must be inspected annually for their operational safety. SCHULTE Lagertechnik supports its customers with association-approved shelf inspectors.

Logistic cycles come into contact here. Goods come in and go out, they are packaged and stored. There is hardly any other place in the company where smooth processes are so important in the midst of so much urgency as in warehouses. Safety is of the upmost priority in places where many work processes intersect; where people work or where high-quality or sensitive goods are moved. This touches on issues of responsibility towards employees, the environment and company values.

This safety is promoted by the European standard DIN EN 15635 and industrial safety regulations as well as the German statutory accident insurance association (BVR) regulation 108-007 (BGR 234) by warehouse operators in Germany. They stipulate an annual inspection of the warehouse facilities by a certified specialist. This is intended to help to identify damage, prevent interruptions to work processes and work accidents as well as uphold values. This is of benefit to all concerned.

We build warehouses and inspect them

We know all about shelving systems and the warehouses of our customers. That's why it makes sense for us to take on the task of storage inspections. SCHULTE Lagertechnik employees have been trained by the German association for storage technology on "approved racking inspectors". If required, you can request that they come to you and put your warehouse under a microscope.

The inspection is carried out during operations as a visual check. Interruptions to processes are thus reduced to a minimum. The objective is to ensure compliance with the regulations on safety measures, shelving components and loading. It is important that safety regulations in accordance with DGUV rule 108-007 (BGR 234) and DIN EN 15635 are observed. The shelving is inspected for visual damages, deformation or missing parts.

Results without bureaucratic complexity

If damages are identified, our inspectors mark them directly on site and provide recommendations on how to restore the equipment to a safe condition. Initial results can be discussed on site immediately.

A standardised inspection report allows the SCHULTE Lagertechnik racking inspectors to systematically work through the inspection criteria and ensures that all criteria are checked. A detailed inspection report is then based on this and is provided to the warehouse operator along with an inspection sticker as proof of the inspection.

Shelving systems made of steel that are subject to inspection

- Pallet racking
- Cantilever racking
- Drive-in racks
- Drive-through racks
- Flow racks
- multi-storey systems

Glossary

Shelving systems Plug-in system
Shelving systems Bolted system
Shelving systems Office
Wide-span shelving
Pallet racking
Cantilever racking
Shelving systems and mezzanine systems

On the following you can find explanations of the technical terms from storage technology and metal metalworking.

Load capacity labels

Load capacity labels are included with the assembly and operating instructions for every delivery.

Sheet metal storage racks

Standard sheet metal can be stored vertically in sheet metal storage racks. A steel roller, the width of the rack, ensures the sheet metal can be pushed in and pulled out easily.

Office shelving

Office shelving is used in archive systems to store files and folders. Both plug-in and bolted systems are used.

Double racks

Two double racks arranged back-to-back.
In cases of double-sided use, cross braces are used for bracing (example: page 36).
When using the full depth of the shelving unit, the shelves are braced with face beams (example: page 38).

Clinching (toxing)

Clinching is a environmentally friendly process to produce positive-fitting and friction-locked connections for sheet metal. It replaces the welding process.

Production process:

The clinching tool comprises a mould stamp and a matrix. The steel sheets are pressed into the matrix by the stamp in a similar process to thermoforming during plastic deformation. The special design of the matrix creates a shape similar to a press-stud and produces a positive-fitting and friction-locked connection for the sheet metal.

Levels

The storage spaces that are situated one above the other is called a level.

Corner angle

Corner angles are used to stabilise and stiffen shelving systems in the screw system in depth and width direction (see pages 120, 133).

Single shelving rows, single-sided use

A shelving unit with single storage space depth – single-sided use or access. Single shelving rows are braced with cross braces as a minimum. Most frequent application: Rows of shelves that are set up in front of a wall.

Single shelving rows, double-sided use

A shelving unit with multiple storage depth space – two-sided use or access. Generally single-shelving rows , that are used from both sides are braced using face beams. This ensures free accessibility to the stocked items.

Most frequent application: Rows of shelves that are freely positioned in the room.

Shelving systems

For shelving systems, storage takes place on shelves on several levels per bay. Operations here are carried out by hand. Shelving systems are also used in multi-storey shelving systems.

Shelf load

The shelf load describes the load capacity of the individual shelf / storage level. The load must be uniformly distributed on the shelf (also see bay load).

Threaded rod shelving unit

This system has been designed for the storage of loose documents, files and forms Dieses System. The threaded rods used prevents items falling out and offer help in organising your documents. Optimal for ongoing operations and quick access during daily business of public authorities, law courts, agencies, law firms, doctors offices etc.

Bay load

The bay load is the maximum load capacity of a shelf bay and depends on a combination of the frame used and the levels. The total of the bay load is not permitted to exceed the specified bay load (also see shelf load).

Hot-dip galvanised

Hot-dip galvanization is the finishing process of coating steel parts with a solid, metallic layer of zinc by immersing the pre-treated metal part in a bath of molten zinc at a temperature of around 450 °C.

GS symbol

The "Geprüfte Sicherheit" ("Tested Safety") (GS symbol) indicates that the equipment meets the standards of the GPSG, (the German device and product safety directive). These are specified, for example, in German trade associations' accident regulations , DIN- and EN standards and other generally recognised good engineering practices. The GS test procedure ensures that the product complies with the requirements of the GPSG.

Beams

In pallet racking, pallets are stored in the racks on a front and a rear support (beams), which together form the storage level. Different strengths and load capacities are used to adapt them to the storage item or the weight of the pallets . To form closed storage levels (e.g. to allow goods to be stored without palettes in picking areas), optional supports made of steel or wood can be supplied.

IPE profile

IPE moulded steel supports are hot-rolled, stable steel supports with a medium, I-profile with a parallel internal surface flange (in accordance with DIN 1025 part 5). Individual sizes allow mean they can be adapted to the required load capacities and the requirements. They are used to construct SCHULTE Lagertechnik mezzanines and cantilever racks.

Automotive racking

Automotive racking is specifically designed to suit the requirements of the automotive industry. It is based on the plug-in shelving system. Special tyre crossbeams beams protect tyres

Cantilever arm

A cantilever arm is an extension arm attached to the uprights to pick up the stored goods (e.g. long goods such as stacked, pipes, etc.). Depending on the type of shelf, the cantilever arm is either firmly welded to the upright or bolted to the upright (and is therefore adjustable in height).

Cantilever racking

Cantilever racking is made up vertical columns and the cantilever arms are attached to these. This type of shelving construction is suited for storing long items (for example pipes, bundles of rods, pieces of wood or iron beams).

Assembly and operation instructions

Assembly and operation instructions are enclosed with every delivery. They are also available to download from the www.schulte-lagertechnik.de homepage.

Pallet racking

Goods on pallets or in pallet cages are the main items stored on pallet racking. Pallet racking is normally loaded and unloaded by stacking cranes.

Hanging file folder shelving unit

The application area for this special shelving unit is the storage of hanging files and pockets from both Elba / Leitz and Zippel systems. These are particularly used for archiving by authorities, hospitals, law firms etc. Hanging files for loose leaf storage of individual files can be suspended and hanging folders for files storage of collected files.

Powder coating

Powder coating is a coating process in which typically electrically conductive materials are coated with free-flowing powder. Thereby the powder is electrostatically sprayed on the subsurface to be coated and then fired in an oven. The burning process melts the powder and the curing process begins. When the curing has been completed, a permanent adhesion is achieved (purely mechanical fusing). It is possible to adjust the properties specifically such as e.g. density, degree of curing, chemical resistance after consultation with the coating manufacturer.

Frames

Two or several uprights, connected vertically with bracing elements (e.g. side elements) and which normally extend the entire depth of the shelving unit.

RAL quality seal

Products and services with the RAL quality seal are tested according to high standards of quality by the Gütegemeinschaft Lager- und Betriebseinrichtungen e. V (German association of storage and associated equipment manufacturers).

The quality and test specifications are manufacturer-neutral and freely accessible. They are a reliable guarantee for consistently high product and service quality.

Bolted system

As opposed to the plug-in system, the shelves are bolted to angle profiles. Corner angles are used in the bolted system for bracing (also see corner angles).

The shelves can be adjusted at increments of 25 mm on the angle profiles. The use of shelves with a 25-mm edge height achieves optimal utilisation of the height of the shelving.

Galvanised using the Sendzimir process

A special process to produce a robust surface on the material. Metal strips go through a galvanising bath. The metal strips can be formed and processed with this surface, without the coating cracking or becoming damaged.

Plug-in system

The plug-in system comprises T-profile frames and shelves. The shelves are hung on the T-profile frames using shelf supports. The shelves can be removed without tools and can be individually adjusted to the stored items by means of the height grid.

The shelves can be adjusted at increments of 25 mm on the T-profile frames. The use of shelves with a 25-mm edge height achieves optimal utilisation of the height of the shelving.

Mezzanine system

The mezzanine system is a modular system, comprising uprights and main and secondary beams, to expand storage area in a multi-storey construction.

Panel racking

Panel racking serves for clearly arranged storage of panels and panel cut-offs of various materials and sizes. The open type of construction guarantees fast access.

Toxing

see *clinch*

T-profile frames

The uprights in the SCHULTE Lagertechnik plug-in system comprise side elements and T-profiles. The special edging of the T-profiles provides particularly high stability and load-bearing capacity (see pages 80-83).

Environmental shelving

Environmental shelving are for storing water contaminating substances. The shelving units are fitted with the corresponding spill containment trays, which accord to the declaration of compliance in accordance with the Germany building regulation list A part 1, DIBt, Berlin.

Wide-span shelving

Wide-span shelving is used for the vertical storage of long and bulky stored goods. The wide-span shelving systems from SCHULTE Lagertechnik allow widths of up to 2500 mm.

SCHULTE CATALOGUE PORTAL

All information digitally in one place

Our OXOMI catalogue portal always contains the latest versions of our SCHULTE media. Here you will find everything you need to successfully sell our products, from catalogues and brochures to assembly instructions and sales-supporting checklists. You can easily access the catalogue portal via the menu on our homepage www.schulte-lagertechnik.de or directly via the QR code at the bottom of this page.
